Trouble at the local bar...

A guy goes into a bar and says, "Quick, gimme a beer before the
trouble starts!"
The barman looks around the sleepy bar, shrugs and hands the guy a
bottle of beer.

The guy drinks it fast. "Quick! gimme another beer before the trouble
starts!"
The barman looks at the guy oddly but hands another beer to the guy.

The guy drinks it fast. "Quick another beer before the trouble starts!"
The barman hands him another beer, with a frown on his face, but hands it
over reluctantly.

Again, the guy drinks it fast. "Quick another beer before the trouble
starts!"
The barman replies, "Look pal, exactly what trouble are you talking about?"

"I haven't got any money!"

Bin Laden's trip to the pearly gates...

After getting nailed by a Daisy Cutter, Osama made his way to the pearly gates. There, he is greeted by George Washington.

"How dare you attack the nation I helped conceive!" Washington, slapping Osama in the face.

Patrick Henry comes up from behind. "You wanted to end the Americans' liberty, so they gave you death!" Henry punches Osama on the nose.

James Madison comes up next, and says "This is why I allowed the Federal government to provide for the common defense!" He drops a large weight on Osama's knee.

Osama is subject to similar beatings from James Monroe, and 65 other people who have the same love for liberty and America. As he writhes on the ground, Thomas Jefferson picks
him up to hurl him back toward the gate where he is to be judged.

As Osama awaits his journey to his final very hot destination, he screams - "this is not what I was promised!"

An angel replies "I told you there would be 72 Virginians waiting for you... What the hell did you think I said?"

A Gift from Little Johnny...

On the last day of kindergarten, all the children brought presents for their teacher.
The florist's son handed the teacher a gift. She shook it, held it up and said, "I bet I know what it is - it's some flowers!" "That's right!" shouted the little boy.

Then the candy store owner's daughter handed the teacher a gift. She held it up, shook it and said. "I bet I know what it is - it's a box of candy!" "That's
right!" shouted the little girl.

The next gift was from the liquor store owner's son, little johnny.
The teacher held it up and saw that it was leaking.
She touched a drop with her finger and tasted it.

"Is it wine?" she asked.
"No," little johnny answered.

The teacher touched another drop to her tongue.
"Is it champagne?" she asked. "No," he answered.
Finally, the teacher said, "I give up. What is it?"

Little johnny replied, "A puppy!"

The Special Pig...

One day a man drove by a farm and saw a three-legged pig.
The man went up to the farmer and said, "Excuse me sir, but why does that pig only have 3 legs?"

"Well," said the farmer, "that there pig is very special.
One time my wife was cooking something she stepped out of the kitchen and it caught on fire. No one in the house knew about it but the pig and he saved me, my wife, and my 2 kids."

"That's amazing sir but why does that pig onlly have three legs?" said the man.

"Then there was that time the pig saw a big storm coming and we didn't.
The pig ran into the house and dragged us out to the storm cellar.
If it weren't for that pig we would all be dead."

"But still, that doesn't explain why the pig only has 3 legs."

"And I remember the time my youngest son was stuck up in a tree but I
was too far away to hear him scream. The pig came running towards
me and led me to where he was."

"Well, that is miracle but how come that pig only has 3 legs?" the man said
quite annoyed at this point.

"Well," said the farmer, "with a pig that special...
you have to eat 'em real slow."

Maybe he should get out into the real world now and then.

It's surely just a game... Like the CB "fox hunts" that were common
in the UK in the 1980s. Very few who took part never did any real "wally
hunting", looking for idiots with a baseball bat, they just enjoyed the game
once a week.

If I get this right, everyone is in the same location, at the same height, at
the same time, with the same conditions... what you call an "even playing
field". You cannot compare two signals from different locations, at
different heights, on different days, with different local conditions (ie.
obstructions), different propogation conditions... and say which is best.

> Since Effective Radiated Power (ERP) is measured in watts, wouldn't it
> make sense to use field strength measurements to discover this figure?
===

Who has a field strength meter that reads ERP directly in Watts?

If Aaron has ever used one, then surely he would know that field strength is read in Volts per Metre, not Watts. The field strength reading is dependant upon other things besides ERP... FS readings at a set distance can change without you changing your power or antenna gain.

As ERP is linked to dBd gain, you cannot calculate an accurate ERP figure using a field strength meter without use of a dipole and comparing exactly the same location, under exactly the same conditions. Even then, it will depend upon the direction you read it from, ERP refers to the direction of maximum gain.

Anyways, if everyone took readings at their location under their conditions when it suited them and compared them, it would not prove who has the biggest penis and can p!ss the furthest (accuracy is never an issue). Let's face it, that's what us men are all about. Shame the *women* on this group cannot understand that.

> it is a great idea to hold your deviation to 2 kHz or so.
===

The early radios used ceramic filters, and receiver bandwidth was quite large. If the deviation was increased beyond the 2.5KHz allowed (as is often the case), then splatter did occur.
A few years back, the RA decided to include an "adjacent channel rejection" figure in the spec for new radios. This meant that xtal filters were needed, splatter was slightly reduced and "loud" audio distorts even easier. When an FM signal makes your meter dance to the incoming audio, it's pretty obvious that the radio has been "super tuned".

> sounds like a shorted final transistor
===

A shorted final would cause problems as soon as the radio is switched on...
the transistor is usually connected direct across the 12v supply.

I would check that the power supply can deliver the current needed for TX.
Pointless sending the radio in if it is the supply that cannot deliver. If
that's OK, check the fuse holder... a poor connection drops voltage and
creates heat at the connections.

It would be best to check these before sending the radio for repair, you may
save time and money.
As for faults inside the radio, I have seen faulty on / off switches cause
this fault.

===

Oh yes, it is very possible.

In the UK, we often see the needle "dance" with the modulation as the person over-deviates. As you say, deviate beyond the rx bandwidth and the receiver signal drops... and the squelch or ctcss will cut in.

Sure, the amount of power stays level regardless of modulation, but this means that the carrier power must drop as the power in the sidebands increases.
There is a point where the carrier hits zero, and all the power is in the sidebands... not a pretty sight (or sound).

Ummm yes there are people in the direct vicinity of major rf producers all
the time whether they realize it or not. People are absorbing rf all the
time.

Here's where I see the similarity between long term hamster radio exposure
and short term cb exposure. The fed's and others have provided guidelines
for SAR.(specific absorption rate)
These guidelines are concerned with how much rf induced heating occurs in
certain places of the human body and in what [amounts over time] it takes to
cause heating. They have not really prescribed a real danger point, only
suggestions based on lab models and a few assumptions. They have some
guidelines describing long term and short term. From what I can garner,
those short term blasts of cb are not enough to cause dangerous heating. The
actual levels may be outside certain lines but no one has drawn the lines
regarding this particular set of circumstances nor has anyone proved going
outside these lines is cause for extreme concern.

Ok. Well, I wasn't trying to make it a moral equivalency argument here. I
was attempting to say I wouldn't be surprised if the overall results of long
term exposure compared to the short term (in this case) weren't similar.

> > Hams have only recently been mandated to use any degree of exposure

> The RF exposure "problem" itself has only recently been uncovered and
> given any serious consideration.

Just recently uncovered. That's funny. Microwave and radar guys realized
from the beginning that rf at certain freqs caused tissue heating.
It got serious attention only because some lawyer decided he could make
a few bucks and gain some free advertising by going after the cell
phone companies. I guess he figured they would knuckle under and pay
handsomely on a "nuisance" claim.

> It is unfair to make a generalization that hams "don't have a clue" about
testing for it.
> Any serious ham, that's above "appliance operator" status should
understand what's
> involved.

Ok, maybe it was a bit brazen of me to make such a blanket statement. I'll
refine it some. They may be aware of the concept but are probably not going
out of their way to conform to it.

> And once again, there is a big difference, from an exposure standpoint,
> between radiation from an antenna 30 feet in the air, running 1KW, and
> one less than 10 feet high with 20 KW behind it.

Now let's remember that we're talking about hamster contests and the "virtually anything goes" applies here, at least to a high degree. I'd say the power levels are consistently at or above 2 kw. I'd also say there are way more hams on the bands during a contest than normal. In this light, far more people are being exposed by hamsters than at any keydown.

As in the case of ham mast/tower mounted antennas, the cb attendees are usually considerably farther away from the antenna. I evidence this by someone's prior statement here. Don't ask me who right now. The operators are somewhat shielded by the vehicle body. Most often a directional antenna is used on the vehicle which can or does further limit the attendee's exposures.

Again, I remind you that different SAR levels apply here due to the difference in time and amplitude.

> >If the neighborhood had to make a choice between putting up with

" A little revolution... every now and again, is a good thing. Don't you think Ryan? "

> Keeping with the "moral" theme though, answer me this; what benefits
> does an RF keydown bring to society in general?

No more and no less than any hamster event. These both provide a chance for comradery, learning and fun. Neither contest is one truly of benefit to the general public.

> Instead of trying to justify why is should not be allowed, give me a good
> reason why it should. Dumping tea into the harbor was a protest of
taxation
> without representation. A cause that was shared by many people back then.
> Other than making the "I'll do what I want, when I want and F*ck anyone
that
> tries to stop me" statement, what cause do "keydowners" champion?

They're just reasonably innocent fun. People need to have fun. You might not agree with it nor do you have to. Most hobbies and fun things have no

salient value to the general public nor need they have.

I already know you'll take issue over "reasonably innocent fun".

Let's cut to the chase. Both hamster and cb events inconvenience a number of folks. In my estimation the hamster event inconveniences more. Both events have a strong possibility of interfering with various other services. I would say the possibilities are greater for the hamsters only because there are more of them at any one time operating over a very large portion of the country. But...no one has suffered a long term issue from either event and until someone can prove otherwise, the heck with it.

The F*ck you thing? It's a sentiment shared by many hamsters too. Just have to
listen to the advanced and extras. They are the ones that are supposed to know better yet they are the ones proclaiming that very thing in the way they handle themselves on the air.(sometimes in those words) Check out 80 at night and 20 during the day.

As a closer, I want to say I am very aware of the technicalities and the likelihood's of interference from both services. I am excruciatingly aware of the inconveniences brought about by both events. I still cannot find where one is better or worse than the other. I think they share the same quality of people and practice. Both have their share of "bad apples" with neither having a corner on that market. They both share an equal shot at damaging peoples health. I doubt there's anyone here that can justify the existence of either service based upon public need. They're just supposed to be harmless fun. (yeah, I know why cb was really introduced)

By the way, earlier on I asked a question and no one has caught it. It was "Does anyone remember the reason behind such events as "field day"?

Hello Sparky: Yeah that would be great, water skying or fishing, or
just site seeing around the place.

Dear old Dad use to always go to Lake Mead Nevada, we would water sky,
fish, and just put around looking over everything, it was great. In the
early 1960's Dad had a 21 foot boat with a old Ford 292 Y Block Engine,
called a Interceptor, Fords name for the marine verison of the Engine.
The name "Interceptor" was hand written in the valve covers castings,
bitchen!

Beside's I think its a FCC rule that you bring your boat. Yes it is!

If my newsreader had let me see this thread at the beginning, but alas
it is too late. I was going to suggest Pokagon ST Park in Angola In.
it has 3 lakes for fishing, great camping sites, nice cabins and
lodge, and close to liquor.

Hello Aaron: Is not a problem. Sparky's bringing his boat, every body should as they are ah?

I am sure all the keydown rules will be followed, here's your change to make a keydown. Meet all the folks this is well worth the cost of gettin there, seeing the sites, have a little BBQ, look all the honey's over (Wooo Hooo), maybe even pick some up some equipment, ect ect.

Mingling around seeing everybody's equipment, seeing different set ups, and talking the technical talk, having a few social cocktails will be a gas.

I am sure no matter what it will be, there will tour bus's and guides that we can all tour around and see the sites, Biiiitchen! The great thing about touring all around is that we can drink (Have a few) while touring around the place. What a ruckus we can make, and we won't be drivin! Its legal.

The neat people, and meeting them all, the comrodery, the fun, the photos and videos, the BBQ, the boating, the Keydown, the after evening camp fires and even more comrodery, OH yeah!

Maybe we can all make it to the Mojave Desert, plenty of room, we can bring dirt bikes, 4 x 4's, go rock huntin, and there's always a neat place to shoot. Gooblers Knob is always a great place to shoot skip, take pictures, and hike around. Its the HOT SPOT for takin your date up there and enjoying all the stars at night! 4 wheel drive is a plus.

I got some neat heavy metal targets, that are a gas to shoot at very long range with 22's, ya hear a distinctive "clang". I put the targets out at 100, 250, and 500 yards, and we have a ball seeing who can shoot and who can't, what a blast! I came up with this after years of going camping and shooting larger calibers that left you with your hands shaking, ears ringing, eye's watering, and your neverous system in shambles. It occurred to me that the larger calibers are not for enjoyment, but for the shooters indurance, and those who enjoy pain.

We will have a blast!

What you are missing here, twist is this: Because a person breaks one
law does that mean he is opposed to all? Of course not. Does that mean
he is opposed to the law he violated? No, not necessarily. All it means
is that he violated a law.

-Not according to your posts. You have claimed, and agreed with some
infamous others,

..my aliases, no doubt...

-But of course

  ignoring laws is a form of anarchy. You have absolutely claimed
that he who discriminately breaks laws is a criminal and deserves no
respect.

Not quite, twist.

-Quite.

What I have said, and continue to say, (in a nutshell) is that people
who show no respect deserve no respect. Gee, that pretty much describes
you, twist.

-Sure does. I treat in kind, but you can't handle it. You get what you
give. I'm extremely happy with the friends I met here. Respect is a 2
way street. You come in here with your aliases and a few others and have
your cb bullshit lies and myths disproved, and you take it as personal
disrespect...a problem you apparently have made yourself comfortable
with.

And since all you are doing lately is just griping, good-bye.

-Not griping, just disagreeing with your errors (I just point these
things out). Your choice of how you handle the matter is on you, bub.

P.S, you can call that a run-away statement if you want, I really don't
care, and neither does anybody else. So go ahead and boost your ego a
notch -- this one's my treat!

-LMAO! Ego? Your continued comical attempts at positioning yourself as
some type spokesperson for those here that you profess illegal during
the last year is partly what resulted in your ego being fractured... no
wonder you are so angry.

Hello Dick: Almost lost the your posting here!

I am not sure what you showing here, I believe its vector addition. I haven't done any of this for years.

As for the squaring of the of the wave forms, and the Fourier Transform, I must admit I don't know, you have me there. But I will dig it up.

No argument that harmonics are a real energy. But if you look at the sine wave form you will see in the first 180 degree's that all even harmonics, evenly add and subtract with the fundamental wave. I can see I need to break out my notes here. And get smart again.

Another consideration here, even if harmonics or spurious energy is present, and will add with the fundamental, it needs to be at least within -20 dB of the fundamental, and in phase to make a 1 dB difference in the fundamentals voltage reading! So this will eliminate a lot of energy levels, from ever making any indication on a watt meter.

Out of time again. I owe I owe, so off to work I go.....

Just another example of you proving how little you truly do know about how to measure ERP. All you need is about 6 wavelengths to get into the far-field, although I wouldn't want to stand that close. But if you sit yourself a few miles away you have too many confounds, not the least of which is ground-wave propogation, refraction/reflection from ground objects, and yes, take-off angle. At 100yds those confounds become insignificant. Now go play with your gun.

-Proliferate? The proliferation of "in your face" attitudes are right here on this board by anticbers. You can't even mention an amp question or talk about a nonallocated cb frequency without one of these anti's being "in your face" about legalities. When they come at someone like a ton of bricks in the manner they do for asking a question that when actually applied may break an FCC rule, what do you expect in return?
-
Twisty this has got to be the lamest excuse you have put forth yet , So because Aaron or anyone els complains that freebanding is illegal and thet you guys openly encoraged the breaking of Federal rules that is why you freeband?

-This wasn't about freeband. Has nothing to do with actions....He made the comment about "in your face" ATTITUDE.

or why people run amps? Twitsy there has been freebanding and that in yourface attitude long before Aaron or any one else who promotes Legal CB Radio ever made a post

-Where? You girls claim it here like an everyday occurrence and I have yet to see it the entire time I have been here...as I said, you girls get shitty, have your face rubbed in your own mess, then cry about it. THAT, is your lame ass excuse.

Like I siad that sure is a Lame ass excuse for this type attitude. The Anti's have every right to promote Legal CB when people talk about breaking FCC Rules.

-And as Americans we have every right to discuss whatever we wish whether you agree or not. Obviously you don't so you and your angry cohorts were reduced to other disruptive techniques and can't even get those straight.

Ask yourself a very simple question. Why do the Anti's speak out about Legal CB? Because they care what happens to others and the 11 meter band,

-No one cares about "speaking out". It's your bullshit lies you profess.

Now ask your self this question why do you break FCC Rules and talk about it openly?
Shall i answer for you, you are ignorant and self centered and only care about yourself you don't care who you are hurting or who you are corrupting with Illegal Cb facts .

-Illegal cb facts...interesting choice of vernacular there, Georgie. At least you recognize they are facts, not the bullshit you and Sparky sling.
Sure, you answer for everyone, which is why you only exist when someone like me replies to you.

-It's the same as usenet. No one is forcing you to stay on the frequency.

More Twisty Bullshit no one is forcing you to stay on frequency?, no but they are certainly forcing legitamite users off of frequencys just like street thugs you take what is not yours and chase the rightful people away. They have a right to be there you as a freebander and power monger

-Here is another lie. Since I disagree with everything you stand for, I must be all that you fear and hate, and that includes a power monger, eh? What constitutes a power monger to you? Anything over 4 watts? 100? 1000? Doesn't matter..you're always wrong.

have no rights all though you think you own the airwaves.

-No , that would be you, as you feel it a personal attack on yourself when I key up and talk to Istanbul on the freeband. Barefoot.

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

Interesting how this discussion goes back to the argument between peak
and average power. But if there is one thing that you and Toll keep
missing is the fact that modulation is VARIABLE, and unless the
receiver has a peak-reading ear, the keydowns are NOT about ERP but
about NOISE.

sparky, ever try to listen to two 50-70 kw stations with a reciever tuned to the same freq at 100 yards? not going to happen. no matter what you say or want to debate these contest are judged by ear on tape from a reciever and not a field strenght meter.

Tim I think you are still wrong, the judge at a keydown could close his eyes and pick the winner, it is who has the loudest audio in his reciever. This is no different than a pileup the guy with the strongest signal doesnt always win. Think about what you are saying. if my erp is 1500 and yours is 1600 are you 100% going to beat me out? don't get me wrong ERP does play a factor but it is not the deciding and only factor. Things are never equal this is not Nascar

Twistedhed wrote:
Bob, Truth be told, I really don't have a problem with freebanders, or the practice of the RF version of a tractor pull. What I have a problem with is the "in your face" attitude that seems to proliferate among those that hold little regard for the rule of law.

-Proliferate? The proliferation of "in your face" attitudes are right here on this board by anticbers. You can't even mention an amp question or talk about a nonallocated cb frequency without one of these anti's being "in your face" about legalities. When they come at someone like a ton of bricks in the manner they do for asking a question that when actually applied may break an FCC rule, what do you expect in return? Tea and crumpets? The "flaunting" is a direct result of the badgering, not a precursor.

Oh no.... No way am I going to believe for a minute that the whole attitude of "the outlaw crowd" was a result of legal "taunting" by those that make it their life's mission to remind us what the rules are.

-I am going to ask one more time and file this with the rest of the theater drama that has been offered up here. Where is this constant "in your face attitude" you are suddenly referring to? You are using it as justification for your views and beliefs, but so far the plethora of examples on this board remain to be shown.

No, it's more like if these "outlaws" were not so blatent in their pursuits of these illegal activities,
-Correct me if I am wrong. This "blatant" flaunting you claim takes place is based solely on reactions from what you read here in response to antihumans, isn't it?

they wouldn't have caused the backlash that they did, by the people that still respect the rules of common courtesy, if not FCC rules.

-Oh, really? Now you are going to make the two mutually inclusive with each other? There is way less common courtesy among these "antis" you speak of than there is "TALK" (talk, just talk, NOT actions, but talk (type) on usenet) by so-called illegals. You disagree here, Dave? Just check out the "usual" anti posts. Almost each and everyone has an insult or name calling, but at least your MO is now crystal clear and in the open with a claim like that. And speaking of backlash? What backlash? A single bill passed that was used once, by one city? A backlash? I beg to differ. But this is the type poetic hype I refer to...backlash indeed.

The difference is that on the radio, a 4 watt "mud duck"'s complaints are easily overpowered and ignored. On usenet, we're all on the same footing.

-Yep, you can shut off your terminal, just like your radio.

There is no power to turn up to drown out dissenters.

-Configuration.

This newsgroup is only a small segment of the radio crowd in general. I am basing my viewpoint on my experiences as a RADIO operator, not as a newsgroup junkie.

-Fair enough. Look at the hammie groups then take a listen to 2 or 20. The groups are worse (respect wise) and the on air antics are indentical.

We used to break the rules back then, but it wasn't so blatent. We were always a little paranoid that the FCC would send one of its "little white vans" to sweep the area. We tried to keep our activities to a low profile, and tried not to attract too much attention. Now the attitude is more like "Yea I break the law, so what?" and "So I cause interference, F*ck em'".

-More bullshit. Maybe you are referring to a personal isolated experience concerning the interference, but who posted anything in this forum that would even remotely support that notion?

Again, this is based on real world radio experience. I could key up right now and ask some loud mouth skip shooter to back it down a bit, and he'll "politely" tell me to go shit in my hat. THAT is why we're fed up with illegal outlaws.

-Same could be said for certain hammies.

It's not the breaking of the rules as much as the total lack of courtesy and consideration for other people, who are also trying to enjoy their form of radio.

-It's the same as usenet. No one is forcing you to stay on the frequency if you don't like what you hear. If you can't handle the posts, skip them.

See, you've made my point. The "If you don't like it, turn it to the left" attitude. It's EXACTLY this attitude that has created the backlash against the illegals.

-Well, that's the point the antihumanistics have made all along here. If you don't like it, skip it...it works quite well. Why the double standard. now?

Suppose I don't like it, and decide to put a bullet between your eyes to solve the problem?

-I'd say you're a bit upset and probably prone to violent acts and have more in common with real criminals than those you accuse of being criminals through cb actions.

I suppose you'd hide behind the laws then wouldn't you?

-No, I'd be dead, unless you missed, then you'd be dead. In Florida, we shoot back. Guns are almost mandatory.

But by your own logic, one illegal act to correct another one is perfectly acceptable.

-How did you infer that? That is the antihuman's point of view.

That was my whole point when I was discussing the "anarchy" angle some time back. Once you lose respect for the principles of law, it's only a matter of time before you justify, to yourself, breaking of more serious rules.
Dave
"Sandbagger"

-And again I ask why you have no problem when the antihumans discard usenet rules when it fits your MO? After all, it's only a matter of time 'till they break more serious rules and laws, right?

Bingo Timmy, that means ERP is not what is being measured it is the audio that determines it, Go Talk to Bob Heil about some of his microphones. If you have a radio with decent filters someone may be in the passband more than the other and this has nothing to do with ERP. So one will appear louder than the other.

Actually I have. But you are right, it doesn't work very well, which
supports the argument even more that a FSM should be used instead, and
they should be measured one at a time. And it also reinforces the fact
that these keydowns cause interference. Good show, Timmy!

> no matter what you say or want
>to debate these contest are judged by ear on tape from a reciever and not a

Well then maybe you should explain how ERP is measured using a tape
recorder.

1485. Re: Why Keydowns Succeed

Newsgroup: rec.radio.cb
Date: 2002-02-16 16:10:24 UTC
From: twistedhed@webtv.net
Message-ID: <27619-3C6E8470-5@storefull-126.iap.bryant.webtv.net>
Source record: 115857

nojunkmail_n3cvj@worldlynx.net (Dave Hall) Twistedhed wrote: Most of the local guys in my area run field day, not for the hope of winning, but for the excuse to sit under a tent and drink beer all day long. They have a lot more fun than some of the "stuffed shirt" groups. Dave "Sandbagger"
-
-Like a social gathering, huh? Sort of like a keydown.
--
Similar, except that we weren't exposing casual bystanders to dangerous levels of RF. Guys engaging in keydowns can make the claim that they will deal with the long term health effects on themselves. But they are also exposing innocent bystanders, who may not have the slightest notion what it is that they're being exposed to.
-
-I dunno. I tend to think that most of the observers are very familiar with radio, epecially the big watts side of it. How much danger is one in from RF when one is standing, oh, say 100 yards away and 10 KW (just for a small example) is being keyed? There are more than a few here that claim engineer status and you certainly don't see them professing these keydown danger myths. I personally feel the danger element from RF at such a distance is so negligible that it's one of those things not worth worrying about.

I am certain the dangers of second hand smoke are a much more serious threat to innocent people than that which you speak of and much more deserving of the attention that is devoted to us cb criminals that rape the airwaves with a few hundred watts and partake in some dx. You may possibly cite the absent of studies to support this type RF exposure, in which case I feel the government would at least have commissioned a study if any element of danger had ever been presented in a convincing manner showing pertinent relation to health.

Then, if any substantiation existed, the appropriate measures would be taken.
If you want to host a social gathering, you owe it to your guests to not expose them to something potentially damaging to either their health or safety.
Dave
"Sandbagger"
-
-Inherent danger exists in all aspects of life's participations. Buy a ticket to any concert or sporting event and read the back of your ticket...it explicitly releases anyone involved from the sponsor to the promoter to the venue of any responsiblity involving any injury or damage occurring to your person simply by your attendance of the event.

The host is responsible for nothing these days, with maybe the exception of assisting in some manner of intoxicating a party goer who injures someone.

>louder than the other.

"Loudness" also has to do with the spectral response of the human ear,
the audio response of the receiver, and of the microphone on the
transmitter. This is mainly because the human ear hears higher freqs
better than lower freqs. So even if the amp and power output are the
same, and both are running 100% modulation, the one modulating the
higher freqs will sound louder. It could also make things interesting
when the speaker on the receiver is semi-resonant for a certain audio
freq...

Interesting Leland, you do a Deja search for that
day and there is no article even posted by Twist.
The only thing that comes close is one that is posted
by someone blasting twist with an edited version from
an Anon account, that wouldn't be you would it?

Yes, It is something that can be monitored, and if found to cause problems
something can be done about it. Broadcast stations, repeaters, hams etc are
all governed by law they stand a chance of losing there license or at the
very least they are accountable for there actions. Try telling that to
Snoop Doggy Dogg runnin his 10,15,20 30 kw he may pull a nine on your ass
what has he got to lose? His 4cx15,000?

Why do you say that, am I not allowed to killfile anyone is that reserved
for you and your bunch.

But I wont' be like Landfag and say someone is killfiled then slip in a
response to that person thru anothers post. Or like NoBrainbusted who takes
people out of the so called killfile just to see what they have to say.

Dick, what is funny, despite getting a bit off course with the fact that the whole field is not a nice 'doughnut', is the fact about being 'loud' vs communicating. Take a nice, easy, 100 watt signal. Some digital modes can copy a signal approaching 30 dB BELOW the noise level. Now take a 50 Hz bandwidth at the receiving end vs 5 KHz for an am signal. Ummm ... there is another 20 dB. Lemme see now - that 'tiny' signal now has a 50 dB advantage before we allow for - 20 dB (level below that 10 KW carrier). That leaves us with a 30 dB advantage for the 100 watt station. Ooops. I forgot, that carrier is most of the signal and conveys no information. Ok, so there is only 2.5 Kw in one of the sidebands, occuping perhaps 3 KHz. This, of course, assumes a clean signal, not one with 25% of its' signal 'somewhere else'. Ohhhhhh - now I remember why W2OY not only couldn't bother me with his kilowatt, I couldn't even HEAR him! Bwaaaa hahahaha!

My guess is some folks best get their meters checked. Nominal voltage in
the US is 117 volts and will vary somewhat, but should never approach 130.
You will start burning stuff up pretty quickly at 135. During brownouts,
you will see voltage dip pretty low, but should never see anything up where
you indicate.

Well, I was about 15 at the time but yes, modern medicine and corporate pension plans have had their effect.

But I doubt that the two of us together are old enough to go into the Elephant's Graveyard where old hams go in the Extra section of 75 meters.

-
This Palomar amp has 6 6KD6 tubes.

The transformer is seperate from the main body, and it connected using
a rectangular 8 spade plug (4 horizontal and 4 vertical)

The meter goes up to 400 on high and 40 on low.

All tubes glow and relay chatters when you key up.

It has a band dial with 10, 15, 20 and 40 meters.

There's no model markings or anything on it anywhere.

-
The only marking on the 300 watt -is- 'Skipper' and the meter goes to
300 on high and 30 on low.

Take a moment and stop by http://dslreports.com and perform a tweak
test/security scan of your system. You should be able to improve your speed
by resetting your RWIN settings. It's also imperative that you have some
type of firewall program running at all times. Click on community and then
select the forum devoted to your cable provider for more tips. Best of luck
with your new cable!

1509. REQ: Pearce Simpson Simba SSB base info

Thanks guys,

The power company showed up about 8:30 this morning (Sat), and my meter was reading too high. (Which I actually suspected) His meter read 121 on both legs, and I was told that they kept it within +/- one volt.

He did check connections at the meter for tightness and gave me several pointers on other things to check, such as bad outlets and/or connections at same. He also verified that anytime a wire is "disturbed" in a main panel, it should be retightened. (Though he doubted that very few people did so.)

What really threw me was that the power company here has a team to check for RFI interference. I guess if I continue having problems, I'll ask them to check that out.

Ace

Trams were designed in the US, at least in the beginning.

Sparky and Mopar are coming to blows in this thread. In another,
Twistedhed and Dave Hall are going to shoot each other. This picnic
idea is turning into a disaster! Jay wants to bring in a bunch of
handguns.

Liquor + guns + conflict = ? Instead of the low-key social
get-together, it could be a big mess, ending with us all in jail.

Plus, everyone's forgotten that the location needs to be near a major
airport.

Yes and what about the receiver? IF bandwidth, AGC settings,
attenuation in line, etc. all would be factors in determining ERP
"soley on the basis of rec'd audio".

And isn't there a large amount of unscientific subjectivity involved
in listening to a "watergate" tape? With two AM signals mashed
together, determining "who is louder" might be soley decided by the
fact that one guy's voice is naturally raspier than the others.

"BobC" <bob_c_89431@yahoo.com> wrote in message
news:<u6s5vi98erdsde@corp.supernews.com>...
Sorry, Bob, a bit more cherry-picking on a couple of points:

># Now let's remember that we're talking about hamster contests and
the
>"virtually anything goes" applies here, at least to a high degree.
I'd say
>the power levels are consistently at or above 2 kw.

Woah. I disagree. "Anything goes" is a popular CB fantasy but in the
real world the majority of people in a ham contest do not make
ridiculous power levels a priority. These contests are conducted by
hams in fixed locations. They don't have the benefit of the multiple
alternator setups used in illegal keydown vehicles to generate the
massive current needed for 50,000 (and above) watt illegal signals.

> Let's cut to the chase. Both hamster and cb events inconvenience a number of
> folks. In my estimation the hamster event inconveniences more.

(A) A multi-op contest station "pushing" their Alphas to 3KW (gasp!)
into beam antennas at 100 feet

- versus -

(B) Illegal keyclowns running 20,30,40,50,60 KW to 9 foot antennas at
ground level?

How can you even compare the two?

> Both events
> have a strong possibility of interfering with various other services.

No, one of them has more possibility. The one with the higher power
output and least amount of filtering for harmonics.

> As a closer, I want to say I am very aware of the technicalities and the
> likelihood's of interference from both services. I am excruciatingly aware
> of the inconveniences brought about by both events. I still cannot find
> where one is better or worse than the other.

One is *consistently* illegal. That would make the legal option the
better one.

> I think they share the same
> quality of people and practice.

Interference vs communication make for a different quality of
practices.
Illegal vs Legal make for a different quality of people.

> Both have their share of "bad apples" with
> neither having a corner on that market.

No argument there.

> They both share an equal shot at
> damaging peoples health. I doubt there's anyone here that can justify the
> existence of either service based upon public need.

For years unold, hams justified their existence with public service.
Nowadays, even with the advent of surpassing technology, hams still
organize on a widespread basis to provide public service. Not so with
keydowners.

> By the way, earlier on I asked a question and no one has caught it. It was
> "Does anyone remember the reason behind such events as "field day"?

"Such events"? There is only one like Field Day. If you are or were a
ham you might know this already. Field Day differs from other contests
in that the idea is to work/run portable emergency powered setups -
such as one would employ in a disaster scenario. I seem to recall
disaster preparedness and cameraderie as the most often-quoted
reasoning behind Field Day in amateur publications.

But I sense you feel there is some 'other' more sinister reason behind
Field Day. (Is this how CB myths get started?)

Frank.....Gary Bedell in Ponderosa Calif bought out the remains
of the old Tram company when they folded years ago. He has
more Tram parts and Tram radio's than anyone in the US.
He was not a Tram engineer, but this is the guy you want to
go to with your questions/problems. He rebuilds/repairs these
and others for a living. He is not cheap, but he is the best in my
opinion, and he has the parts to get the job done.
He has done several for me. I am sorry I can't seem
to find his number, but all you have to do to come up with his
email is do a search on ebay for user "Tramtech" and it may even
be on his "me" page. Good luck with what you are after.

Blame the jews. They're using popular culture to pidgeonhole whites into lame, nerdy, beta male stereotypes while playing up the physical prowess of black males (that they've achieved through thousands of years of evolutionary traction, while the white man spent that time honing his intelligence) and encouraging black male/white female relationships (notice how that's the only interracial relationship hollywood and mtv pay attention to?). In order to fit in white kids must now talk in ebonics sound like they're illiterate, wear headbands, baggy pants, and other apparel that makes them look like they don't know how to dress themselves, and listen to mtv tell them how blacks with gold teeth and fur coats are the utmost in style and coolness, and how blacks have nice abs and rhythym and must be worshipped and idolized. Why the jews have done this is unknown, but it seems to be aimed not at building up blacks but simply using them as a pawn to tear down whites, as evidenced by the other strategies the jews are using. Look at the Jerry Springer show; it regularly romanticizes white women cheating on their male partners with other women, and the males in the audience have been conditioned by the jew Springer to support it as fervently as possible. Whenever a white woman reveals she's betrayed her partner by having a lesbian affair and brings out her hateful, man hating dyke lover, and tells the world how her white man wasn't adequate, the male audience members start chanting "we love lesbians" cheering and celebrating and making as much noise as blacks do in movie theatres. Hardly any attention is paid to blacks at all, aside from commercials aimed at stupid inner city blacks who like psychic hotlines. It seems as if the jews are using several avenues to strike at white males, and putting nigger rap stars on mtv and peer pressuring white kids to watch rap videos and start emulating black culture is one of them.

Source record: 115897

Walking through San Francisco's Chinatown, a tourist from the Midwest was fascinated with all the Chinese restaurants, shops, signs and banners. He turned a corner and saw a building with the sign "Moishe Plotnik's Chinese Laundry."

"Moishe Plotnik?" he wondered. "How does that fit in Chinatown?" So he walked into the shop and saw a fairly standard looking Chinese laundry. He could see that the proprietors were clearly aware of the uniqueness of the name as there were baseball hats, T-Shirts and coffee mugs emblazoned with the logo "Moishe Plotnik's Chinese Laundry."

There was also a fair selection of Chinatown souvenirs, indicating that the name alone had brought many tourists into the shop. The tourist selected a coffee cup as a conversation piece to take back to his office.

Behind the counter was a smiling old Chinese gentleman who thanked him for his purchase.

The tourist asked, "Can you tell me how this place got a name like "Moishe Plotnik's Chinese Laundry?"
The old man answered, "Ahh... Everybody asks me that. It's the name of the owner."

Looking around, the tourist asked, "Is he here now?"

"He is right here," replied the old man. "He is me."

"Really? How did you ever get a name like Moishe Plotnik?"

"Is simple," said the old man. "Many, many years ago when I came to this country, I was standing in line at the documentation center. The man in front of me was a Jewish gentleman from Poland.

"The lady at the counter looked at him and said, 'What is your name?' " He said, 'Moishe Plotnik.'

"Then she looked at me and said, 'What is your name?'

"I said, 'Sam Ting.'"

It does help to have a detatched viewpoint or at least an appreciation of
the surreal, doesn't it?

It also helps to have a good sense of humor, no matter how bad a
situation is, there is something funny to laugh at. This was brought
to my attention when I was in NYC. Sunday October 28th was the
momorial ceremony at ground zero, I was there, it was a very somber
occasion, and you don't need me to explain why. ANyway here I was, and
all of a sudden I am surrounded by people in uniform, including fire
chief, police chief, and many officers and firefighters. We started
talking the who "where ya from" thing, and when they heard I was from
ohio, the fire chief said "well you haven't seen our state bird yet
then have you?" I said that I hadn't seen it. He points to a pidgeon
walking on the sidewalk and said "well now you know the New York state
bird." Everybody had a good laugh.

Wow, Twisty. You are obviously concerned about illegal CB getting a
"bad name".
You may be too late to do effective damage control. I suggest you
research HR2346 and find out the actual real-world reasons why that
bill was created. The outlaw CB power freaks are directly responsible.

-Aaron-

Ah, but that's got to be the buyers fault... ask the AKCers. Amateurs take
every
reasonable measure to ensure that the equipment does not fall into the hands
of CBers... just doesn't cross their minds to refuse the cash.

I didn't get the "hamaholic" post, as he is in my killfile... along with all
the other names he uses.

Why would he killfile anyone? He goes out of his way to make sure we see
his messages, to then killfile us would make his efforts totally pointless...
even from his twisted point of view.

No he doesn't killfile anyone... he might miss something, like one of us
making a reference to "linears" or "keydowns".
If he killfiled us, he would have no purpose on here. We are his life...
rather sad he doesn't have one of his own.

Hi Sparky.

Must have replied to you somewhere, coz you are out my killfile (temp. of course).

Anyways, I have no problem with the use of "Handles" on here... including someone calling himself "Sparky". You do not pretend that "Sparky" is your real name, and including your name in your header info is your choice, wouldn't bother me either way.

Some on this newsgroup have my full name, and a Google search for my surname does bring up 1000s of results, including a city name (although it is an uncommon name). But then "Gilliland" and even "Frank Gilliland" bring up quite a few... have you seen the "Gilliland Clan" web site?

Oh, Hamaholic... try MSN, AOL, or "Dogpile" searches... you will find me on the top of the list. Others have found the site that way, including one using "cet.com"... hey, couldn't be... no, surely not.
There are also many other sites listed for a "brainbuster" search (like brainbuster.co.uk)... you couldn't have looked very far.
And try looking at Aarons site... he does claim his name is "Aaron Voobner" and even gives a "family crest".
And one more thing... I am not the one asking everyone to give their real names. Use what you like, "Handles" are used by "keyclowns", "AKCers" and those who are neither.

Brainbuster.

I will be going off-line for a short time... don't miss me too much, chaps.
My e-mail will still be there, but I will not be able to access it until the
system is back on-line.

I have just updated the site to include jokes with joke subject selection,
search boxes and "send to a friend" available... in the "fun" section.
The site is on a different server, so use the link below.
http://clik.to/brainbuster
Go ahead, make my day... sign the book while you're there.

I guess that some on this group want something a bit more "personal" than
just "Brainbuster", like maybe something linked to me or my family...
something their searches did not bring up.
OK, maybe just this once - try this...
http://mysite.freeserve.com/the6hills/
Please sign the book, remember to say who sent you.

Catch y'all when the system is back on-line.

Brainbuster.

Did you ever bother to check and see if Dick's name is real? Or maybe Leland's? How about James? Or Timmy? Or anybody else? Do you just assume that they use their real names? And how do you know that they aren't just someone using someone else's identity? Or does it just bother you that you can't find anyone named Voobner in the phone book? If -you- know it's fake, then why is it any different than Landshark, or Twistedhed, or SDJones? And why don't you whine about any of them? I'll tell you why -- because you are a hypocrite.

This is a newsgroup, Brain. If you want everyone to post their name on Usenet then maybe you should set an example. If not, then just shut up about it.

Amateur Radio Newsline Report 1279 – February 15, 2002

Amateur Radio Newsline report number 1279 with a release date of
Friday, February 15th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio helps in the face of a California wildfire and an appeals court says that pirate broadcasters cannot be banned from getting FCC licenses. These stories are first on Amateur Radio Newsline report number 1279 coming your war right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS AID AT FALLBROOK CA. FIRE

Ham radio was on the scene as a wind-whipped fire raced through the remote north-western portion of Fallbrook California on Sunday February 10th. Sixteen homes were destroyed along with one sheriff's vehicle and two fire trucks. Among the houses that suffered damage was that of Grammy winner Rita Coolidge. An estimate 2600 acres were burned as this report is being prepared. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--
According to Bob Gonsett, W6VR, Amateur radio operators were more than ready when the emergency the emergency hit. And so was their local repeater system:

--
W6VR: “We have two repeater systems that are tied together on Red Mountain that serve Fallbrook and Fallbrook is fortunately a hotbed of Amateur Radio activity. Lots of logistics communications took place in support of Red Cross activities, animal evacuations, people evacuations and it was a very, very busy repeater system which, incidentally, is backed up by emergency power.”

--

Gonsett, who is editor of the CGC Communicator broadcast industry newsletter says that hams were posted at key points in the community. This included the fire department, the sheriffs department, the hospital and the evacuation centers. Some hams provided mobile communications for animal rescue operations. Others, who specialize in evacuation matters and health and welfare traffic worked in conjunction with the American Red Cross to provide support. W6VR says that it was just about a textbook ham radio communications effort for both people and equipment.

--
W6VR: “Their performance was outstanding in every respect. The repeaters worked flawlessly. There was no jamming. The greater community pulled together on this one.”
--

Volunteers came from across the region. Bill and Wayne Dewey, WD6AHW and WD6AHX, served as the Net Control operators. A father and son team, the Dewey’s spent hours directing all radio communications on the Fallbrook Amateur Radio Club's repeaters. Another ham volunteer was Jess Mauk, KD6YEI, of San Diego. He manned a RACES van sent in from San Diego County. In all close to thirty radio amateurs served in the first wave of volunteer communicators. Gonsett says that hams were there because they wanted to help:

--
W6VR: “It was really heartwarming to find such an outpouring of devotion from the ham community in people coming up here and making their presence known and contributing as they could. They were all useful and the community leaders thanked us repeatedly for our roles.”
--

Most communications took place over the Fallbrook Amateur Radio Club’s dual redundancy repeater system This is actually two separate machines designed and built by Chris Durso, AA4CD. One outputs on 146.175 MHz and the other on 445.600 MHz. Both carry the same audio. In time of emergency anyone with a scanner radio in the Fallbrook and Temecula California area can tune to either frequency and hear all of the ham radio communications.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

One last note. According to Gonsett, one of the luckiest hams on Earth has to be Joel Brown, KE6FHS. Brown is the president of the Fallbrook Amateur Radio Club. His home survived the wildfire. Sadly, his immediate neighbor’s' house burned to the ground. (ARNewsline(tm), W6VR)

RADIO LAW: COURT THROWS OUR PIRATE RADIO LICENSING BAN

Just because a person one operated a pirate radio station is not enough reason for the FCC to ban him from ever getting a broadcasting permit. So says a Washington D.C. Federal Appeals court. Amateur Radio Newsline’s Paul Courson, WA3VJB, reports from the nations capitol:

--

The government is not allowed to use your past as a bootleg radio operator to block you from holding a legitimate broadcast license, according to a ruling from a federal appeals court February 8th.

But any victory might be short-lived for onetime pirate operators wanting to turn legit.

The case out of Washington DC involved Greg Ruggiero, a onetime bootleg radio station operator around New York. He challenged an FCC rule that bans those found guilty of pirate broadcasting from ever holding a license, or being formally associated with the recently-created low-power radio station service, an industry that has become known as FM microbroadcasting.

The appeals court agreed with Ruggiero's claim such a ban is unconstitutional as the law is now written. But the court also left open the possibility Congress could write a more narrow law in line with the First and Fifth Amendments. Part of the argument centered on a protest philosophy held by many unauthorized microbroadcasters, who see their bootleg ops as civil disobedience.

The appeals court, siding with the former bootlegger, said there was some evidence Congress, in writing the ban into broadcast law, meant to punish those with a protest message, without really improving future compliance with the law. They called it viewpoint discrimination, and said ... not allowed.

Communications law experts are mixed whether the ruling has implications beyond FM low-power broadcast licensing, including whether FCC can use violations in one service to administer broader punishment.

Traditionally, the FCC has kept open the option of revoking other licenses held by a violator, beyond the service where the violation took place. For example, someone in violation on the ham bands might have his commercial radiotelephone license pulled as well.

In Washington, Paul Courson, WA3VJB, reporting for the Amateur Radio Newsline.

--

And what might this decision mean to Amateur Radio? Especially those cases where ham licenses are challenged based on character issues. According to retired ARRL President George Wilson, W4OYI, probably very little. George, who is also an attorney, says that despite the ruling, the FCC still has the authority on a case by case basis to deny a license to a pirate broadcaster. They can also still designate for hearing the license of any station who breaks the law or violates government rules. (Published news reports)

**

RADIO LAW: FOIA BECOMING MORE DIFFICULT

Hams fighting the FCC over enforcement and other issues are finding it a lot more difficult to obtain government records under the Freedom of Information Act. This is because of an administration policy change made a month after the September 11th terrorist attacks. That’s when Attorney General John Ashcroft directed all agency leaders to be more cautious in releasing records.

Over the years, some hams who have been tagged with violations by the FCC have tried to use the federal Freedom of Information Act to try to get a line on their accusers. Most of the time the government refuses unless the person making the request can show good reason for the information to be released.

While not of a national security nature, none the less, bureaus like the FCC will most likely be heading the words of Attorney General John Ashcroft who says that agencies must carefully consider things including the effectiveness of law enforcement before releasing any documents. Ashcroft says that agencies that legitimately turn down requests made under the Freedom of Information Act will have the backing of the Justice Department in doing so. (Published news reports)

ENFORCEMENT: LOS ANGELES AREA PAROLED RADIO OPERATOR RE-ASSERTED FOR PROBATION VIOLATION

A Bell California man on parole for jamming police communications is now being held without bail for violating his probation and allegedly making death threats on the 2 meter band. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details.

--
You may remember that back on November 14, 2001, the FCC set aside an Amateur Service license and the call sign KG6IRO that it had issued to one Jack Gerritson. That grant was made only a few days earlier on November 8th. The Commission took action after it received information that Gerritsen had been arrested in 1999 and convicted in 2000 for interference to the Los Angeles Police Department radio system.

Gerritsen was out on parole after serving one year of a five year prison term on that conviction. On January 29, Los Angeles FCC agents participated in the pre-dawn re-arrest of Gerritsen after authorities received complaints of death threats allegedly made by him on several Amateur frequencies.

As Gerritsen was on parole in the earlier case, a no-bail search and arrest warrant was served. This is because the terms of his probation banned him from possessing any kind of radio transmitting equipment.

But at the time he was taken into custody Gerritsen reportedly had over twenty radios at his premises. Of these the FCC says that eight were capable of operating on frequencies in the Amateur, Marine, Land Mobile and Public Safety bands. The FCC says that Gerritsen even had a Marine radio with batteries connected to it, and a length of antenna line running outside his residence hidden in a closet.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The FCC says that after they set aside Gerritsen license that he continued operating and causing deliberate interference to numerous Amateur radio repeaters in the Los Angeles area. It acted on these complaints. Now Gerritsen may spend the next four years in jail. (FCC release, other sources)

**

ENFORCEMENT: FCC ORDERS POWER COMPANY TO HELP A HAM

The FCC has told an Alabama power utility that it has to clear up interference it is causing to a local ham radio operator. Amateur Radio Newsline's David Black KB4KCH, has the latest from our South East Bureau in Birmingham:

--

For more than two and a half years, Dan Jeswald, W4NTI, says his ham radio communications have been hampered by a pesky problem: interference. Jeswald moved to Anniston, Alabama, in June, 1999. It wasn't long after that, he says, that he began experiencing interference on numerous high frequency bands. He says 6 meters became unusable because of popping sounds and other interference Jeswald says sometimes rates full scale on his equipment. He says the noise is worst during cold weather and sometimes goes on for days.

Jeswald suspected a faulty transformer or other power company equipment. He says he contacted Alabama Power. Jeswald says the power company responded and began working on the problem. But in midstream before the problems were eliminated, Jeswald says there was a change of people he dealt with at the power company. Jeswald says his efforts to get help with the problem since then
have gone nowhere.

With few options left, Jeswald contacted the ARRL, which put him in touch with the FCC. On January 30th, Special Counsel Riley Hollingsworth sent a letter to Alabama Power's Chief Executive Officer. In the letter, Hollingsworth advises the utility about Commission rules governing equipment that generates unintended interference. And he informs the company of its responsibility to fix the problem, or possibly face fines if a violation is found.

A call to the power company seeking comment was not returned. Meanwhile, Dan Jeswald just hopes the airwaves clear up--and soon.

From Birmingham, Alabama, David Black, KB4KCH, for the Amateur Radio Newsline.

--

Alabama Power was given thirty days to advise W4NTI as to what steps it was taking to solve the interference. (FCC release)

**

THE CHANGING OF THE GUARD: WAYNE WILLIAMS, K4MOB - S.K.

A radio amateur who dedicated almost a quarter of a century editing a ham radio magazine has crossed over to the other side of the Ethereal Abyss. This with word that Wayne Williams K4MOB, editor of the SouthEastern Repeater Association magazine "The SERA Repeater Journal" has passed away.

According to Gary Pearce, KN4AQ, Williams died at home early Tuesday morning, February 12th of complications from cancer. He was 65 years old.

Pearce says that Williams passion in Amateur Radio was FM and repeaters. He became active in SERA's predecessor, the Carolinas-Virginia Repeater Association, in the early 70's. This, at a time when two meter FM was just beginning to gain in popularity.

In 1977 Williams became the editor for the group's magazine, the Repeater Journal. The Journal was already a respectable size 44 page booklet, with regional advertising from local dealers and hamfests. But over the next 23 years, K4MOB built it into a quarterly magazine featuring full-color covers and both national and regional advertising.

--
Gary Pearce KN4AQ: “Through the Repeater Journal and through the coordination body Wayne helped to provide the infrastructure that we enjoy today on VHF and UHF FM. Repeaters that we can operate with a minimum of interference and maximum of range and quality of enjoyment.”
--

In parallel with his SERA activity, K4MOB also established Williams Radio. He started the business by amassing a huge inventory of crystals. In that pre-synthesizer era, two meter FM radios required a pair of crystals for each frequency used. Other crystal sources made hams wait days or weeks for delivery but Williams Radio was one of the few instant sources of crystals for almost every frequency, and for almost every radio. Later, the business added accessories and several lines of radios. It was a family affair, with Williams wife, brother and sons pitching in at hamfests across the region. K4MOB retired from Williams Radio in 1997.

Wayne Williams, K4MOB, is survived by his wife Gerry KB4SER, and two sons, Wayne Jr. and Chris. A third son, Greg, passed away in 2000. Pierce says that Wayne Williams was a very special man in ham radio. All that knew him say that he will be missed. (KN4AQ)

HAM RADIO IN SPACE: HAMS ASKED TO HELP NANOSAT PROJECT

Ham radio is being asked to provide technical support for an upcoming satellite project. Jeramy Boot, G4NJH, says it is a bird called Nanosat:

--

John Heath, G7HIA, the Secretary of the National Space Centre Amateur Radio Society, reports that Bristol University is asking the world-wide amateur radio community to assist with data capture from their forthcoming Nano Satellite Project.

Hand-launched from the Space Shuttle during a space walk, the 6.5-kilogram satellite will send data that can be decoded with software available free from their web site. The software is not yet written because the university wants to give amateurs the chance to have input into how they would like the data stream: 1200 baud AX25 packet, 9K6 packet, Bell 202, or Soundcard etc. More information and an on-line survey form is available on the web at www.handsat.co.uk

Jeramy Boot, G4NJH

--

If you missed that website address you can find it in the print edition of this weeks amateur Radio Newsline report. (GB2RS)

**

INTERNATIONAL - ENGLAND: QUEEN ELIZABETH’S 50TH ANNIVERSARY

Thanks to the efforts of the Radio Society of Great Britain, UK Amateur Radio operators will be taking part in a very special celebration. On Wednesday the 6th of February, England’s Queen Elizabeth marked the 50th anniversary of her accession to the royal throne. The Queen's Golden Jubilee will be celebrated next June, and the RSGB has negotiated the use of a special prefix for the celebration. Starting June 1st and continuing through the 30th, UK hams will be permitted use of the 'GQ' prefix to help commemorate the event. (GB2RS)

**

DX

In DX, E20NGF says over the Internet that there is now a new Worked All Thailand Provinces award. There are currently 76 in Thailand and this particular awards requires that you contact and confirm each one. And while E20NGF calls it a great challenge to all award chasers, he also notes that its

not all that difficult to log 20 provinces these days with more than 1000 Thai hams already on H-F. Check the various DX and awards websites for full information. (RSGB)

THAT FINAL ITEM: THE NEW ZEALAND AREC AWARD

And finally this week, New Zealand's team of Amateur Radio Emergency Communications volunteers has received an important award. Its a special honor in recognition of their providing support of Search and Rescue efforts down-under. Amateur Radio Newslines Jim Meachen ZL2BHF in Auckland has more:

--

The inaugural presentation of the New Zealand National Search and Rescue Award for the year 2001 was made to AREC at a ceremony held in Wellington earlier this month.

The Award recognizing AREC's outstanding performance and contribution to search and rescue in New Zealand was made by Marion Hobbs MP on behalf of the Government Minister of Transport. In presenting the Awards Marion Hobbs said of AREC:

--
Sound Here
--

Brian Purdie ZL2ADL the National Director of Amateur Radio Emergency Communications accepted the Award on behalf of the AREC team and thanked the New Zealand National Search and Rescue Committee for the award.

--
Sound Here
--

The National Director of New Zealand's Amateur Radio Emergency Communications Brian Purdie ZL2ADL. Further detail of the award ceremony with photographs can be found on the NZART web site at www.nzart.org.nz.

From Auckland New Zealand, I'm Jim Meachen ZL2BHF for Newsline.

--

By the way, ZL2BHF says that he will be a flying in from Kiwi Land to take part in this years Amateur Radio Newsline sponsored live Ham Radio Town Hall meeting. It takes place at the 2002 Dayton Hamvention at 1 p.m. Eastern time on Saturday, May 18th. (ZL2BHF)

==========

When I found this recipe I though it was perfect for those people
who just are not sure how to tell when poultry is cooked thoroughly,
but not dried out. Give this a try.

6-7 lb chicken
1 cup melted butter-- or margarine
1 cup stuffing
1 cup uncooked popcorn
salt/pepper to taste

Preheat oven to 350 degrees.

Brush chicken well with melted butte/ margarine, salt and pepper.

Fill cavity with stuffing and popcorn.

Place in baking pan in the oven (uncovered).

Listen for popping sounds. When the chicken's ass blows out
the oven door and flies across the room, the chicken is done.

And you thought I couldn't cook.

==========

Having a bad day? Just remember, it could be worse.....

1. The average cost of rehabilitating a seal after the Exxon Valdez oil
spill in Alaska was $80,000. At

a special ceremony, two of the most expensively saved animals were released back into the wild amid
cheers and applause from onlookers. A minute later, in full view, a killer whale ate them both.

2. A psychology student in New York rented out her spare room to a carpenter in order to nag him
constantly and study his reactions. After weeks of needling, he snapped and beat her with an axe
leaving her mentally retarded.

3. A woman came home to find her husband in the kitchen, shaking frantically with what looked like
a wire running from his waist towards the electric kettle. Intending to jolt him away from the deadly
current she whacked him with a handy plank of wood by the back door, breaking his arm in two
places. Until that moment he had been happily listening to his Walkman.

4. Two animal rights protesters were protesting at the cruelty of sending pigs to a slaughterhouse in
Bonn Germany. Suddenly the pigs, all two thousand of them, escaped through a broken fence and
stampeded, trampling the two hapless protesters to death.

And finally.....

5. Iraqi terrorist, Khay Rahnajet, didn't pay enough postage on a letter bomb. It came back with
"return to sender" stamped on it.
Forgetting it was the bomb, he opened it and was blown to bits.

Your day's not so bad, is it.....?

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

A little nit-picking here myself..3kw?? Outside of being blatantly
ILLEGAL (gotcha) and most hamsters don't have a 100' tower especially
in field day remote locations and if their amp will do 5kw or 10kw you
can bet thats what it will be doing. Are you now alluding to a notion
of "degree"? As in "well, it's only twice the legal power so screw it.

> - versus -
>
> (B) Illegal keyclowns running 20,30,40,50,60 KW to 9 foot antennas
at

> How can you even compare the two?

I am willing to bet there are but a few cb setups that can even come
close to running 20 kw. Still fewer that can run higher. Fewer still
that can reach the stars. I would also bet that there's quadruple the
number of illegal hams (power wise) operating during a contest than

any cb get together.
>
> > Both events
> > have a strong possibility of interfering with various other
services.
>
> No, one of them has more possibility. The one with the higher power
> output and least amount of filtering for harmonics.

Ok, I think I see what's going on here. Let me define my term
"interference" for you.
I think of it in terms of how many people will be inconvenienced
regardless of cause. My list of causes includes all of the more
probable technical issues plus the number of stations on the air
during a selected period of time throughout a geographic area.

My contention is still one of... Ham radio freq.s' cover more ground
geographically and spectrally for longer durations than cb. Therefore,
it takes less ham stations to cause interference to the inhabitants of
a band. Also, since the ham stations participating in an event are
more widespread geographically, the probability exists that more
individual local area services and citizens will be affected. Compare
this to a very localized group who might interfere with one or two
local services or a small local group of individuals.

I would agree if it were just a matter of "the rules". This isn't
the case. You are dealing with people now and sometimes "people" don't
lend themselves readily to rules. In many instances of law, the law is
not always just. It is not always prudent and many times it doesn't
denote common sense. There are times when a law must be tested for
it's relevence in the here and now.

Inform me of the public services they are needed for now that
couldn't be handled as well by public safety equipment.

Forgive me. I lump all contests into the "field day term". I realize
there are some slight differences.
Field day doesn't absolutely require the remote setups although extra
points are given.

> I seem to recall disaster preparedness and cameraderie as the most
often-quoted
> reasoning behind Field Day in amateur publications.
> But I sense you feel there is some 'other' more sinister reason
behind
> Field Day. (Is this how CB myths get started?)

Hahahah no, nothing sinister.

It was really only setup to allow a prearranged time for all
hamsters to get on a band and get used to their range and ability to
overcome noise and interference. It was part of training for traffic
handling and eme comm's as you said.

> Interference vs communication make for a different quality of
> practices.

If you can define a communication as CQ'ing over and over again on
top of several others doing the same thing just to swap a couple call
signs and signal reports more power to ya. I would say that's about as
close to intentional interfering as can be. Which, at any other time,
would be illegal.

> Illegal vs Legal make for a different quality of people.

Perhaps, but in this case it doesn't... unless the ones claiming to be legal will stop doing the same things as the ones they claim to be illegal.

Hello Bob C:

Yes maybe we need to find a spot where ya all can came and camp out side, in the open vast Mojave Desert, dirt bikes, dune buggies, keydowns, rock huntin, shootin and plinking long range targets, hiking, watching the stars at night next to the camp fire, BBQ'in and having a pot luck get together, exploring around, and all the neat things to do.

We can always have ah dress up and go night in Vegas, for a nice dinner and night life. A lot of guys just get a room there and will wonder back to camp the next day or 2. Thats a lot better than some Sleazy Bar, next to a Laundry Matt.

Now with the digital cameras and all we can exchange photos and all. Group photos of all of us, and just for kicks, maybe even with everybody holding a gun and a bottle, YEAH! Maybe we'll make the cover of QST Magazine, I'll buy 7 copies for my Mother.....

We set up for the evenings camp fire, collecting wood, usually we bring a lot of firewood, set up my "High Fidelity" outside speakers, and we listen to mix's of Rock n Roll and Country Western Music, everything from Tex Riter to Allan Jackson to Elvis, to Chuck Berry, to Oldies but Goodies, to Led Zeppelin.
I like Creedence Clearwater Revival, ZZ-Top, Beach Boys, Allan Jackson and on and on.

Usually one guy will do all the BBQ'in while everyone bitches at em, tellin em how they want there stake or hamburger or hot dog. I take whatever left over and tell all I got the best steak!

After the BBQ and Pot Luck dinner, everyone has a few social and then anti social cocktails and sets around the camp fire and listens to the music for hours and hours, and enjoys all the peoples company. I can see it now talkin about all that exotic DX and skip, blowin up your new Linear Amplifier, ahhhh the stories and comrodery, the generator ah humming in the background.....

I am there!

Congrads on the ticket. I use my modified Grant XL to listen to the code.
I'm lazy about getting my General because where I live it would be
impossible for me to put up a beam. Plus I just don't seem to want to put
out the money for a H.F. rig right now. I'm to busy with another hobby. I'm
happy with just helping with the local events with just my tech privileges.
If you have not already advanced to General then maybe you could use your
cobra like I did my Grant XL. Listen to the code from it for studying the
different speeds people tend to send at. JMHO is all.

C.J
Carl is my name family just called me C.J. Sorry I won't post my call.

I concur...on both points. First off, congratulations on your ticket. You're gonna love HF. Secondly, that rig is awfully hard to come by in mint condition and was manufactured "by mistake." It's a long story but suffice it to say that it was built as a legitimate Cobra and then dropped because Cobra did not want to get back into the export business. The remaining units on the assembly line?...enter the Connex 4800DX. You may want to reconsider selling it. BTW, until you get a full coverage HF rig, that 148GTK DX+ will put you on 10-meters just fine. Good luck now.

Why? Don't you know that Heathkits are collectibles? You want to ruin
it for a little more power? Do you know that you need to quadurple
your power just to double your range? You would be better off buying a
better antenna. And if you really want more power, sell the Heathkit
and buy something that was designed for more power.

Reluctantly selling the following in order to get more toys! Heading for eBay soon but figured I'd offer them up here first:

Midland 13-510 2M Fm solid state synthesized mobile, 1.5/10/25W, super basic rig (no memories, no tones,no nothing!) that is rock solid, great receiver, and in excellent condition. Only known flaw is that the meter sticks at about 1/3 scale. Has scarce quick remove mounting bracket, original mike, original manual and even still has the little wire stand for desktop use. Great big forward angled speaker, easy to see display, no worn lettering. This rig is perfect for packet use, on the kitchen counter, or for the car on the daily commute roundtable on your favorite repeater, no menus or magnifying glasses here, just a simple dial it up and go rig. $85. Really hate to see it go but working on an HF rig and so it leaves me!

Pearce Simpson Tiger 40a 40channel AM CB, Pll02a chassis, super example of what CBs were really like before the throwaway stuff out there today, original mike, bracket, and looks just about unused, works fine. A really pretty rig, bone stock and ready to use. $35

Uniden Grant XL 40 channel AM/SSB mobile, not the prettiest one on the block but not a rat, either. Shows normal use, all the lights and display working 100%, has the "usual" mods done well, and works great, includes mount and noise cancelling amplified hand mike with a new battery, this is one of the earlier models. $100

Craig crystal scanner, in nice condition, looks fine and has a hot!! receiver (outhears my 760 on 155.595), pick up a few local freq's for $4 each at G & G Communications and put it on the nightstand or in the garage, it'll be there when the fire siren blows or the sheriff car goes by with the lights on. Hi-Lo-and I think UHF as well. $15.

Shure 450 desk mike, looks like the 444, wired for Swan(?), uglier than a mud fence but was working in an estate station that I picked up a few years back. $15

Cruddy looking little SWR/wattmeter, 10/100w scales, about as ugly as the 450 Shure but you won't feel bad dragging it around in the car or throwing it in the tool kit. Works fine, rugged construction, $10.

Wilson 2000 "trucker" mirror mount 10/11M mobile antenna, short shaft model, antenna only, shows normal wear but working fine, choice of red or black, $25

All plus shipping/insurance, ppd. MO only, PayPal available but you pay the fees.

It was a re-release of the Golden Eagle Mic that was out a few years ago.
Now that Astatic has taken the D-104 off the market you can expect these
mics to start going up in value soon.

More stuff to clean it out, eBay bound but offering it up here for a while...

Yaesu SP901 speaker, scuffed up but works fine, $35

Paradynamics kilowatt rated 3 position HF antenna switch, new, $15

Simpson 260 V-O-M case repaired but working, meter face fine, will throw in a handful of test leads, probably gonna need batteries, $35, or will swap for a digital bench type meter

Archer (Rat Shack) dual chain HD type antenna bumper mount for those big sticks, new, $10

Shipping extra, ppd MO only, PayPal avail. if you pay the fees....keep watching for more!

> Get a router! Screw that software firewall crap!

A router simply masks IP's and won't block outgoing traffic in the advent
you pick up a Trojan nor will it block JavaScript/ActiveX exploits nor
defeat someone intent on breaking into your system. Personal recommendation;
"Norton Internet Security" http://www.symantec.com/ or freeware alternatives
"ZoneAlarm" http://www.zonelabs.com/ or "Tiny Firewall"
http://www.tinysoftware.com/ Go to Gibson Research http://grc.com/ and run
a security scan to see for yourself.

> close to running 20 kw. Still fewer that can run higher. Fewer still
> that can reach the stars. I would also bet that there's quadruple the
> number of illegal hams (power wise) operating during a contest than
> any cb get together.

Bob, just because you say it doesnt make it so, just because you don't know the answer doesnt make it so. How many hams run 100 kw ? How many run 75 KW? how many run 50 kw? Saddle up your horse and go to the next major keydown check out how many people run over 10 kw . If your a ham there is no need to run that power level they are not in competiton unlike Channel 6 and Keydowns. Bob check this site www.extremecb.com or www.bigradios.com perhaps you are unfamiliar with the amount of cbers running over 3 kw I am sure you wil find some hams running more than 3kw, They would be know law breakers like Toll Free who has a ham license but is a Power Monger on the CB Band. Bob you are willing to bet there are more illegal hams? Bob prove your point otherwise just because you say it doesnt make it so. Do the amateur bands have a freq like 27.025 where know scofflaws regularly congregate and brag of running ridiculous amounts of power.

> My contention is still one of... Ham radio freq.s' cover more ground
> geographically and spectrally for longer durations than cb. Therefore,
> it takes less ham stations to cause interference to the inhabitants of
> a band.

Bob think about what you are saying here CB band is 26.965 to 27.405 less than a 1/2 mhz bandwidth, it is like trying to fit 10 lbs of shit in a 5 gallon bucket, Get one guy in your area running hi power and the whole CB band is unusable for them Combine this with the fact if you went to the illegal CBer causing the splatter you will probably get the typical answer buzz of F__ You.. etc If a ham is causing any interference you have his call sign and location So your claim it take less hams to cause interference is pure bunk substantiated by your lack of knowledge on the subject. Prove to us there are hams running 10Kw or better, I can prove to you there are many cbers running over 10 kw on a daily basis. Hell we even have a few who hang on this NG on a regular basis

>Also, since the ham stations participating in an event are
> more widespread geographically, the probability exists that more
> individual local area services and citizens will be affected. Compare
> this to a very localized group who might interfere with one or two
> local services or a small local group of individuals.

Bob where are you getting your facts ? So you are saying that CBers are not located across the uSa and only hams are?? Bob at any point in the day turn on 27.025 Cbers from Hawaii to florida to Texas to NY to Chicago all playing channel master in there local area
Bob what do you call it when someone from the Bayou on 27.025 bleeds over someone on the east coast 2 -3 channels each way. Where are you getting this localized small group? please come up with facts Sir not your opinion. Provide a reference a valid link to a page? The keyclowns would demand this if the shoe was on the other foot.

> # Inform me of the public services they are needed for now that
> couldn't be handled as well by public safety equipment.

Talk to Keith Hosman he was in NY, go to a few amateur web site do some research then come back to Us. Congress and the president have recognized the importance of amateur radio to public safety. Can you come up with any for the Illegal CB operators cause? Just one Bob.

> # If you can define a communication as CQ'ing over and over again on
> top of several others doing the same thing just to swap a couple call
> signs and signal reports more power to ya. I would say that's about as
> close to intentional interfering as can be. Which, at any other time,
> would be illegal.

Bob, As long as the FCC doesnt say it is intentional then I guess it is ok If I am in a contest which I don't contest personally. But if there was a station in guam that eveone was trying to reach and there was a pileup, who is to say I can hear the other stations trying to reach the OP in Guam, how can I interfer with someone I cannot even hear?Please Explain that one.

>
> > Illegal vs Legal make for a different quality of people.
>
> # Perhaps, but in this case it doesn't... unless the ones claiming to
> be legal will stop doing the same things as the ones they claim to be
> illegal.

Bob, For you to even sit here and argue that keydowns which happen daily on 27.025 as well as others along with the RF pollution that goes on on the 11 meter band in any form or fashion is the same as what happens on the Ham bands, Bob you are either just a Troll or an advocate of Illegal CB operation or actually don't know any better? Which is it, you give opinions which are debunk by the group of keyclowns in here daily. Read the archives and check the 2 links I gave you. I just tuned to 27/025 as we speak, the s-meter is at 40/50db over s9, If I tune to any other point on the dial on the 11 meter band it is s-5 max, why is this occuring. Do you want a picture of the spectral display? If yo know of any hams who are also not CB operators running over 3 kw lets have there callsigns. After all where do you think a large portion of hams came from? I sat here on friday nite

listening to a ham/CB operator talking to a cber on 27.510 lsb the CB op wants to get a Icom706mkII,
You would think hey this guy is going to get his ticket and get off of 11 meters Right? No he wants to use it on the freeband, and was encoraged by the ham with the Big Yaesu ft , What do you consider this guy a ham or a Illegal CB op who is on the freeband? he is neither he is just a person who thumbs his nose at the law.

> in field day remote locations

Whoa, you are mixing apples and oranges here.

Towers - Of course contesters have towers. 60,80,100 feet. Check out some CQ magazine covers. If the big contesters spare no expense, they will all certainly have beam antennas, right?

Field Day - Um, check out a field day club station next June. Find out where the nearest ham club is set up and go there. It will be an eye opener. Regular old Honda generators. Lotsa barefoot transceivers. (Where are they hiding the 6-alternator Suburbans and the 64 pill boxes?)

> and if their amp will do 5kw or 10kw you
> can bet thats what it will be doing.

OK, hang onto your hat because here comes a sweeping generalization. I will tell you one thing I notice about CBers in general. They assume that the rest of the radio world is as obsessed with RF POWER as they are. They imagine every ham station has a commercial-grade Henry linear (LOL) that's running 24/7.

> Are you now alluding to a notion
> of "degree"? As in "well, it's only twice the legal power so screw it.

Oh come on, this is the same kind of excuse criminals use, i.e. "Well politicians steal, so why should I be jailed for robbery?" etc.

You must admit that the ham community has a self-policing policy and has begged for Riley H to administer the Wouff Hong where needed. Also hams are traceable. Callsigns and ID's ensure non-anonynmity. Useful in solving interference complaints.

Keydowners are anonymous and run in the opposite direction when 'policing' is mentioned.

>
> > - versus -

> close to running 20 kw.

OK, well I have never been to a keydown. But I hear conflicting reports of power levels. I'm sure someone will jump in here and insist that 20 KW is not only possible but common.

> Still fewer that can run higher. Fewer still
> that can reach the stars. I would also bet that there's quadruple the
> number of illegal hams (power wise) operating during a contest than
> any cb get together.

The problem of CBers running high power has resulted in interference to consumer devices, complaints to government, and HR2346.

The problem of hams running high power has resulted in no such impact. I have to believe that perhaps either (a) that many hams AREN'T running high power, or (b) the hams emissions are spectrally purer and/or freer from harmonics.

> >

> during a selected period of time throughout a geographic area.

Where are all the "complaintants" of this interference? Are they
consumers? Other hams? I see no evidence of a widespread problem
caused by ham contesting. Except for isolated bitching ("I couldn't
talk to Fred on 14.250 today because there was a damn contest on")
which has gone on from time immemorial.

> My contention is still one of... Ham radio freq.s' cover more ground

If the rules are reasonable and there to ensure the fair use of
resources, why not obey the rules?

> In many instances of law, the law is
> not always just.

You need to think about WHY high-power amplification and unlimited use
of the radio spectrum is not available to unlicensed individuals.

> It is not always prudent and many times it doesn't
> denote common sense. There are times when a law must be tested for
> it's relevence in the here and now.

Well I don't believe that this is a case that justifies civil
disobedience. Unlimited use of the radio spectrum is not a god-given
right.

No it's not like it was in the 1940's when shortwave was high tech.
But....
When the WTC went down many cell sites went with it. 911 services
were overloaded as well as dispatch centers. Volunteer orgs such as
RACES and ARES (hams) filled the gap until the communications
infrastructure could be repaired.

You oughta brush up on the details. Extra points are given for
operating QEP (low power).

> would be illegal.

I don't see where the intentional interference is. CQ is necessary to
make contact. The rapid format (signal reports and callsigns) is
necessary to exchange information. Where's the interference?

> > Illegal vs Legal make for a different quality of people.
>
> # Perhaps, but in this case it doesn't... unless the ones claiming to
> be legal will stop doing the same things as the ones they claim to be
> illegal.

I am sorry but it sounds like a case of sour grapes and overactive
imagination, or both. You imagine that "everyone else is crooked" and
there's no use being legal or honest about anything.

Of course there are crooked people in the world, no one is denying
that. There are folks that don't work, they just rob other people
instead. And the majority of citizens are well aware they could do the
same - but choose not to.

Bob, there is a guy right now giving his e mail address as
skullcrcka@aol.com he just stated he is running 25 kw on 27.025
Funny part is he has 3 clacks that he is trying to make you think is keying
up 3 different amps the best is it is just some type of a recording since
his powerlevel never changes. he is talking to a guy named bb who is running
a Foxy 96 pill from his mobile in florida, he said he is crusing his 96 pill
at 15 kw and this guy primeminister wants him to bump it up to 25 kw. Anyone
want to hear the wav file?

Hello Landshark: Yes Vegas would be a good call.

Haul ass (or fly) into Vegas, rent a car, and room, and we could radio everyone into the camp site.

Yeah I think Dick is right about aaron being a women, aaron has that kind of "Bitch if ya hung with a new rope attitude"

I think a RRCB Camp Out would be a neat thing to have. Maybe a central located place so all the troops could come to.

Hambo John:
(a) I am not a MUD Duck, Rubber duck!
(b) I haven't talked on the freeband in years!
(c) I use the ENTIRE Bible, not just a portion. I am Justified by FAITH, as it says. CB or the freeband is NOT a "foolish thing." If you did it, that makes you a FOOL, right? On THIS NG, we promote CB and everything that goes with it. Just because you want to be a GOOD BUDDY of N8, that doesn't entitle you to BASH CB on MY CB NewsGroop! So go bacsh CB in the Hambos own NewsGroop, because you are NOT welcome to do it here (you're on the WRONG Freq., Quacky!
(d) Just because you are "legal" in the eyes of the communists, doesn't mean that you are a GOOD BOY ! After the commies come for US, they will go after you next!

1601. A GUIDE TO RAPE DRUGS FOR POTENTIAL RAPISTS

Newsgroup: rec.radio.cb
Date: 2002-02-17 19:58:38 UTC
From: transbuk@pokemonarena.net
Message-ID: <b4b04a33.0202171158.7d942b79@posting.google.com>

Cross-posted to: rec.sport.pro-wrestling,alt.smokers.cigars,rec.radio.cb,rec.arts.movies.current-films,alt.elvis.king

The internet is a wonderful thing. The hype is true...we are creating a global community here. I am proud of this and I am aware that to ignore the advantages of the information age would be socially irresponsible. I know there are many of you out there who could be rapists, but are not brash enough to get a rape kit together and grab a woman off the streets. Some of you are too timid to even commit the most enjoyable kind of rape: Date Rape. I am sure RAPE DRUGS are for you. If this post results in just ONE woman getting raped, than my work is done. Without further ado, here is my guide to rape drugs.

Rape Drugs are drugs that render a woman defenceless and open to forced intercourse. The various drugs act in different ways, but they all render her unable to phyically respond to the intercourse. Most of them also help you avoid the law because they cloud her mind and erase her memory so she cannot positively identify you as the rapist, recall where it happened, or how she got there. This kind of rape lacks the power rush that traditional rape provides, but it lacks none of the sexual gratification of traditional rape. To administer rape drugs, you need to consider many things including dosage, effective time, taste, and outward appearances. Consider also that many people will see you with the woman before you take her away to degrade her.

The first drug we will talk about is HALCION. Halcion is no longer available in Europe, Canada or the United States. You can still obtain it without a perscription in Mexico. It was taken off the market because it was discovered that long term use results in a paranoid psychosis. George H. Bush took it while in office. Halcion was designed as a sleeping pill and was popular because it left no hangover or grogginess the following day. It passes through the system very quickly. The reason it makes such a good rape drug is that it completely eliminates the memory of the person for the period the drug was working..usually it takes out at least 2 hours of memory. It is also a potent drug and 50mg will be enough to get her into a state where you can fuck her until her labia falls off and she will not remember it. There will be no trace of it in her system in 15 hours or so, and mixed with alcohol it becomes even more potent. Use Halcion when the woman is a stranger and you are in control of the drinks...being the bartender is best. Halcion will not paralyze her, but she will be out cold during the rape.

Another good drug is MOGADON. Mogadon is not available in the United States. You can now get it in Canada with a perscription. It has been available in Europe for many years with a perscription. I am not aware of Mexico's policy on this drug. WARNING>>>>>>>YOU CAN KILL HER WITH

THIS!!! Unless killing her is your cup of tea, be careful. Mogadon is the most potent sleep drug out there today, short of what you get at the operating table. 5mg will put a 250 pound man to sleep within 20 minutes. I have taken this drug myself..trust me on this one. Mogadon will not only put her to sleep for a day and half, it will make her groggy for a couple of days afterwards too. Remember, the longer she is unable to make a report, the better off you are. Mogadon in the food is good, but with alcohol it is even better. She will not appear drunk..she will appear sleepy and you can drag her to a place where you can fuck her for hours...all night if you wish. Remember to wash her vagina, mouth, and rectum clean(and anywhere else you have ejaculated) afterwards. Use about 20 mg to be sure she is out.

The most popular drug is ROHYPNOL, aka ROOFIES. This drug has gotten the most press, and as a result it has been banned everyhwere except..you guessed it..MEXICO! In Mexico you can buy it over-the-counter. The reason ROHYPNOL is the most popular rape drug is that it mimics alcohol both subjectively and objectively. To people observing the woman, she appears really drunk...stumbling, slurring words, acting brash etc. She FEELS drunk..her head spins, she feels giddy and happy and she associates the feeling with the drinks she has had. This means that she is unlikely to clue in to being drugged before it totally kicks in. Additionally ROHYPNOL mixes well with booze and has no taste. Like HALCION, ROHYPNOL wipes the memory of the victim and she will not remember what happened. It most cases of ROHYPNOL rape the only clue the women had that they were raped is the fact that their vaginas and rectums hurt after they woke up somewhere. If they are not SURE they were raped, how can they press charges?? Although illegal in Canada, The US and Europe, it is sold on the black market by street dealers in these countries, usually under the name "ROOFIES"

Other drugs include KETAMINE, LSD, and VALIUM. KETAMINE is a veterinary anesthetic. It is interesting because it completely paralyzes the victim for about 15 minutes, but her mind will be all together, so wear a mask. Use this for "back alley" rape where you grab a strange woman and rape her. LSD is a famous drug, but hard to use as a rape drug. LSD aka ACID is a psychedellic. Given a high enough dose, LSD will fuck up her mind so much that she will have no clue what is going on as you rape her. She is likely to think she is a cloud on a pin dancing to beebop tunes on a city bus rather than a rape victim. It also tends to wipe memory, but it is not always true. LSD can take a while to kick in, so she will think something is up before she is incapable of getting help. It is best to dose a sleeping woman, lock her in a room without a phone, and wait a few hours. By the time the LSD trip wakes her up, it will be too late. VALIUM is an oldy but goodie. Available everywhere with and without a perscription, it sedates the woman to the point of sleep and mixes well with alcohol.

GOOD HUNTING!!!!

Yep, it is. One of the goals of the commies is to GET RID of national holidays (George Washington's Birthday) and replace them with commie hero birthdays (billy clinton, Roosevelt, Wilson, and the rest). So tomorrow when you don't get your mail, or can't go to da bank, KNOW that the REAL American holliday is friday, Where George WWW Washington WAS better that what THEY put in since 1913, because he said "Stay OUT of the affairs of Europe," which they HATE him for that, so they took away his National Holiday to Honor him, and gave it to pinkos like bill c. & fdr!
Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

1604. Re: heathkit

Newsgroup: rec.radio.cb
Date: 2002-02-17 20:07:36 UTC
From: 'Doc <w5lz@icok.net>
Message-ID: <3C700D72.D9AB08E5@icok.net>
Source record: 115816

Jim,
Your talking about a major re-build. Basically,
a new transformer and capacitor bank, up grading the
rectifier board, and buildeing another cabinet to house
all of that (won't fit in the amplifier). The RF deck
also has to be rebuilt, components rearranged, new
holes, sockets, and cooling system. By the time you
get through with all that, you've got more invested
than a new amplifier would cost (almost). You've also
reduced the value of your amplifier cuz' it isn't
'original' any more. If you do the work you can
'discount' the labour costs. If you have to pay for the
work being done, you better have deep pockets! This is
not considering the 'extras' envolved with a multi-
tubed amplifier, such as spurious emission supression,
oscillations, etc. There are single tube amplifiers that will
put a multi-tubed Heathkit on the porch all week long.
They aren't cheap, but neither is doing what you want to
do...
'Doc

Yep, Walki -Talki Crystals. 2 per channel. NOT a "Hand Held." A Walki-Talki. Maybe it was for a 6 channel CB. Bought them years ago. RS sells them for $5 each now, I sold them for $4 ! Remember when they were $2.50 ? Paper $$$ got more worthless in time! Can't believe I got an order for some on da phone, and sent them out COD post office.

HEY--you want some FUN--call the post office's 800# and ASK a SIMPLE question (Like how much is the COD fee, or how much is certified). You will need to talk to a stoopervisor to get the answer! Yep, da post office TOOK AWAY their old local phone numbers, and when you call it, dey give you an 800#. You can get their new LOCAL # by asking for it, but they won't tell you that! Centralization it is called. I call it Communism!
Dave!!!!!!!!!!!!!!

Correct, but run in conjuction with antivirus software, which will catch the trojan in the first place, it is much more secure than a simple software firewall. Don't believe me? I haven't changed IP's today, see if you can get in.

1622. is there a lot of truth to this or what???

Newsgroup: rec.radio.cb
Date: 2002-02-17 22:00:50 UTC
From: arcweb@bnnorth.net
Message-ID: <3c70279e.418684@news.bright.net>
Source record: 115834

A Georgia woodpecker and a Kentucky woodpecker were arguing about which state had the toughest trees.

The Georgia woodpecker said that they had a tree that no woodpecker could peck. The Kentucky woodpecker challenged him promptly pecked a hole in the tree with no problem. The Georgia woodpecker was in awe.

The Kentucky woodpecker then challenged the Georgia woodpecker to peck a tree in Kentucky that was absolutely un-peckable. The Georgia woodpecker expressed confidence that he could do it and accepted the challenge.

After flying to Kentucky, the Georgia woodpecker successfully pecked the tree with no problem. The two woodpeckers were now confused. How is it that the Kentucky woodpecker was able to peck the Georgia tree and the Georgia woodpecker was able to peck the Kentucky tree when neither one was able to peck the tree in their own state?

After much woodpecker pondering, they both came to the same conclusion: Your pecker is always harder when you're away from home.

Prohibition was more of a contributer to our countries alcohol problem
than anything else. Make something illegal and people will do it for
the "thrill" of doing something they shouldn't.

1624. FS: Antron 99, Super Swamper, etc.

Newsgroup: rec.radio.cb
Date: 2002-02-17 22:43:55 UTC
From: k9sqg@aol.com
Message-ID: <20020217174355.18444.00001744@mb-bh.aol.com>
Source record: 115836

Helping a ham transition out of CB, etc. Right now he is into 2m and 440 so has no need for some items. He has two Antron 99 antennas that can be used on 10 meters, one of them has the ground radial kit. Both have been used but are in very good condition; no instructions but the adjustment rings on the bottom are easy to adjust. He also has a Hustler 5 BTV, it is the 4BTV with the 75/80m optional resonator; used but in good condition; no manual but instructions are readily available on this newsgroup. Finally, he has a brand new, never used, New-Tronics (i.e. Hustler brand I believe) Model 27-TD "Super Swamper" CB base station antenna; included the assembly instructions. Let me know if you are interested in some or all of these. Thanks for reading the posting.

Can also use 6LF6, 6LX6 and a few other tubes. 8950s if the fils pins are rewired.

>
> The transformer is seperate from the main body, and it connected using
> a rectangular 8 spade plug (4 horizontal and 4 vertical)

That was done to facilitate easy shipping so when the amplifier broke, you wouldn't
have to ship the heavy transformer back to Escondido, California.

>
> The meter goes up to 400 on high and 40 on low.
>
> All tubes glow and relay chatters when you key up.
>

\

You have the Palomar 300A. If it has a chrome top, it is more than likely an earlier model.

Some take a shorty 6KD6, which are no longer available, so when retubing the unit, you
have to put spacers between the socket and the chassis to drop it below sheet metal level.

Good amps, but they are dated.

the
> 10 watt carrier over the 4 watt rms

You would.

Sean, Dennis and one other person had a great debate over this before.
That's where radar ratings,
PEP and AVG powers came into argument.

It was eventually settled when #12 pulled out a 4 tube or 6 ube mobile doing
low avg power
numbers, but high PEP values (something along the lines of 3 kw).

Your wrong. a 10Kw modulated carrier will be close to 40 thousand watts of
output.

Just another ham showing his lack of intelligence on AM theory.

I suggest whatever your amp runs best at!

I don't know what amp you have, what antenna system you run, or anything.

I would run a 3X6 volt system, charging 21 volts if my amps would take it.

Otherwise, its a 2X 8 volt system.

The most important thing, if you have alternator power, is the CCS rating of
the batteries. Otherwise, if your
going to rely on the batteries to make up for a lack of alternator power,
get high reserve ratings.

NO, they were centralized to make this country into a USSR ! How does it save money to set up a central office, and keep the local ones, where hardy NO ONE at the central location knows anything of what is going on! YOU get REAL ! Your college trained phoney world is comming apart, because it is not based on God's Holy word, The Bible!
As far as drugs are concerned (to make ME think like YOU do), God will judge your wicked heart for even thinking such a wicked thing! That is WHAT is wrong with most americans; most are on drugs because the wicked Medical Industrial Complex pushes it for profit! Orwell spoke of YOU !
Dave!!!!!!!!!!!

Heaven, Randy, Heaven. Unions, as well as Corporations, are communist. The NEA Union is especially guilty of dumbing down this country to make us DUMB, so we will accept socialism & communism, which has pretty much worked. But it is backfiring in their faces. The NEA has been taken over by liberal commies that have put forth all kinds of UnAmerican junk to ruin da country! Dave!!!!!!!!!!!!!!!

The problem with YOU suggesting this is that you will have your Brown Shirt storm troopers (Candy Men) there in full jack booted thug commie gear! All complete with sledge hammers in their hands looking to smash ALL CB's they could see!!
Sin City (Lost Wages) is out. It is enough of a Gamble to be on CB in the first place! As far as drinking is concerned, it would be MORE of a "rush" to be there straight, just like I did at my 20th high school reunion. I may go to NC depending on where it is, but can you imagine N8 getting busted for starting this NG "Shootout" there, while certain people in the NG fight among themselves?!!!! Peace, not war! That may be called a "terrorist" meeting by the Hamboz! Where is the long haired Hippy
Freqs.!!!!!!!!!!!!!!!!!!!

> Yep, the other day I thought of what you Hamboz should REALLY worry about!
> Some other post has you worrying about not many Hams getting into Hamboland
> these days.

It seems like from my point of view that once one or more CBers in a local group gets their Ham ticket most of the rest soon follow. All it takes is the first convert, from CB to Ham, to convince the others that all they have to do is observe the rules, and behave in an adult fashion then there is no problem. In addition they can do just about everything they did on 11m on the Ham bands AND enjoy the protection of the law if they cause interference to neighbor's home electronics, so long as their equipment meets FCC technical standards. And that is all due to FCC Part 97, and Part 15 in particular.

It is not the first time I have personally gone to a group coffee break where there is a mixture of Ham and CBers. Sooner or later one of the still CBers comments he wants to get his Ham ticket and dump the mess on 11m.

news:xlYb8.100423$Zc.27479937@news2.rdc1.mi.home.com...

It seems like from my point of view that once one or more CBers in a local group gets their Ham ticket most of the rest soon follow. All it takes is the first convert, from CB to Ham, to convince the others that all they have to do is observe the rules, and behave in an adult fashion then there is no problem. In addition they can do just about everything they did on 11m on the Ham bands AND enjoy the protection of the law if they cause interference to neighbor's home electronics, so long as their equipment meets FCC technical standards. And that is all due to FCC Part 97, and Part 15 in particular.

It is not the first time I have personally gone to a group coffee break where there is a mixture of Ham and CBers. Sooner or later one of the still CBers comments he wants to get his Ham ticket and dump the mess on 11m.

--
Leland C. Scott
KC8LDO

Been a while since I was at a CB break but this was pretty much my experience as well. I had one guy who lived a few doors up the street from me who put on a sweep tube linear which resulted in our meeting and more or less rescuing him from a committee of his neighbors carrying torches and nooses. The solution was to trade the whole thing on a Sillytronics. So one quiet Saturday I wandered up and knocked off a raft of countries during a contest on 10 meters just for diddley and we got to know each other over a bottle.

Well, I said Sure, I'll help you with the ham tests. Wander over Tuesday nite and let's get started. Comes Tuesday I had a dozen bodies in my basement. And so began my tutoring career. The code test in them days was 13wpm and some guys turned white and shook when I put it on but we got about a half-dozen to General and Advanced. One is still a good friend after thirty years or so.

As this group illustrates different people are here for different reasons and get different things out of the hobby. So it is not a usual progression but one which comes up often enough to make it interesting. My own experience has been that sidebanders are generally pretty civilized and savvy people and AMers by and large are not; I will leave the groupies to figure that one out but 'loud and proud' may have something to do with it. You sure don't see the playtoys and radio butchery on SSB.

Having been licensed longer than CB has existed I never had the experience so I am certainly not the resident genius. I do get the impression here that the SSBers are deserting the ranks in platoon strength as the AMers invade everywhere. It appears that like card games that become progressively dumbed down over time CB is well along the same path.

There is something to be said for doing one's hobby in a situation designed for hobby use rather than bend the rules of a Land Mobile service.

Hi.

When a firend of mine gave me a clunky old CB unit with a K40 which he got from a relative (and didn't have any interest in) I eagerly wired it into my car and soon discovered the fascinating world of CB.

Unfortunately I let a friend borrow the gear for a trip and his car got impounded by the police and was never seen again.

Anyway, these days I live about 2 blocks away from I-35 and I thought it would be nice if I could get a handheld to listen to them and take in the car.

The most important thing to me is being able to use it indoors without batteries, so I'd want a model that either has an a/c adapter available as an accesory or can use the juice supplied from one of those small multi-voltage power adapters. (3, 4.5, 6, 12)

Any suggestions?

Thanks!

Source record: 115966

Unused RCI 2950 DX (2), in the box. It would be advertised as "New-in-the-box" except that the case was opened last March by a tech who plugged in the frequency expanding module, then closed it. No other modifications or tweaking have been performed. The mic has been keyed in the shop through test equipment into a 50 ohm dummy load to verify the frequency expansion and to test power, AM modulation and FM deviation. It is perfect and is "as new."

It was never used or installed in anything, but placed back in its original box with its manual and accessories a year ago. It has never been around a smoker. It is being sold only because I have lost my vocal cords to cancer and it now looks like my radio days are over.

The price of $280 is firm, but includes USPS shipping anywhere in the U.S. Payment by Postal Money Order or cashiers check.

Seriously interested folks can email me at tomc100@attbi.com.

Priced 50 volt devices next to overvolted 12 volt devices?

One of the points I brought up earlier... You can get near, or as much as a
50 volt
device with an overvolted 12 volt device.

What are the masses going to purchase? The 250 dollar pair of 50 volt
Motorola devices,
or the 30 dollar pair of 2879s?

50 volt parts are nice, and do work well, but they are cost prohibitive to
the typical CBer.

Yes, but what is the cost?

>
> I figured since the current was cut by 75% (compared to typical 12
> volt)for a given output power you could easily combine 2 or 4 devices.

Been done.

>
> I figured with 4 devices running a total of 6400 watts input power
> would be about 130 amps. At 60% you would see 4000 watts out
> comfortably. Without volting it.

Good, cuz from what I have seen from the 50 volt FET's, they don't like to
be
overvolted much.

>
> How many "unvolted" transistors do you need to get here with ordinary
> 12 vdc parts. Even volted "comfortably" how many?

about 12. Well, 12 would get you slightly under, 16 slightly over.

However, your still money ahead transistors-wise with 2879s, since
they run about 15 bucks a piece (If you know where to purchase, and
most amp manufacturers do). 4 of them will do what one of the 600
watt FET's will do. thats about 60 dollars worth of transistors, and maybe
another 10 to 15 dollars in associated circuitry (teflon wire for the
combiner,
and the material for the combiner and splitter). 75 dollars and you get
1200 watts
PEP output. How much for the FET? Hundreds?

I like 50 volt devices, have successfully put together a 4 FET box, and ran
it for
quite some time before getting rid of it. However, the public isn't going
to
shell out a thousand dollars for transistors, when they can get the same
power level out of a reliably volted 2879 for a quarter of that cost :(

>
> Like I said before, it was just an idea I had rumbling around in my
> head and hadn't done the research yet to discover the "cost
> effectiveness".

Good idea. If it's for yourself, go for it. If it's for trying to make
money, forget about it.

> Only if it's shorted at the collector
===

A c-e, or c-b would do this as soon as connected (c-b would drive the tranny "hard on"). But then a b-e short would not short out or load the power supply... the current available at the base is too small.

So, any RFOP transistor fault that will load the supply will do it as soon as connected... RX or TX.

For SSB radios, there is another possibility... biasing. A high bias can drive the tranny hard enough to overload the supply and it would only show on TX, as the bias is taken from a TX only supply.

That's it... computer is going off-line now. Catch you when it's all connected up again.

Brainbuster.

===

Hey, Sparky... wasn't me asking for peoples names... it was your bosom buddies. Are you going to call them hypocrites... No, why? 'Cos your one too.

I have made it clear that I don't care about real names (but your eyesight fails when the words do not suit you). Here, let me help you out a bit...

<quote name="Brainbuster" ref="my last post; shown above">
I have no problem with the use of "Handles" on here
</quote>

What part of that did you not understand?

<quote name="Brainbuster" ref="last post; shown above">
including your name in your header info is your choice,
wouldn't bother me either way
</quote>

How about that one, what part did you not understand?

<quote name="Brainbuster" ref="my last post; shown above">
Use what you like
</quote>

That was pretty clear and unambiguous, but obviously not clear enough for you.

So, who does have a problem with people not "identifying" themselves? Let me help you out again...

<quote name ="Aaron H. Voobner">
Illegal CBers would never come forward to take
responsibility, much less identify themselves.
</quote>

Surely not, no... your chum would never whine and moan about identities. He couldn't possibly be the one who started this "identity" issue... could he?
And now even his buddies are saying that "Aaron Voobner" is just a "handle" and he will not identify himself and "take responsibilty" for his actions. But then you've got your head so far up his ass, you cannot hear Aaron moaning, or see the hypocrisy in that post.

Just Like your good pal, Aaron, you twist words and conversations to suit what you would like to say. Your buddies say something and you decide to blame everyone else.
Is passing the blame considered to be "taking responsibility"? I think not.

Once again, you have proved that trying to be reasonable with you or one of your chums is totally pointless.
Get a grip on reality.

Goodbye.

Brainbuster.

That's it... computer is going off-line now. Catch you when it's all connected up again.

===

What's "a on CB".

The word "a" is an adjective to be used before a singular count noun. The
word "on" is not a noun, if it was, then "a" should be "an".
You could start by checking your own posts for errors before going though
other messages looking for typing errors.

You bet it's the truth. For example, it was like pulling teeth to get the location of the October 2001 WDC keydown from the keyclown "club" that sponsored it. I talked on the phone with very evasive guys who would only give their names as "Killa" and "Stevie Wonder". The question is, if they're so proud of what they do, why are they hiding?

>Surely not, no... your chum would never whine and moan
>about identities. He couldn't possibly be the one who
>started this "identity" issue... could he?

Nope. Do some research on the keyclowns in rrcb. Their first reaction to a post they don't like is to hunt for the identity of the individual making the post. They unearthed my family web page, but it failed to give them any satisfaction. So they went on a mad crusade, accusing everyone under the sun of being me. It still goes on today.

>And now even his buddies are saying that "Aaron Voobner"
>is just a "handle" and he will not identify himself and
>"take responsibilty" for his actions. But then you've
>got your head so far up his ass, you cannot hear Aaron

See here you bloody nerk, this NG has been crying and moaning about Aaron Voobner for quite some time. If they choose to get all worked up about me, that's THEIR responsibility, not mine.

Where are there any licensed "megawatt" broadcast transmitters in the
U.S. (other than H.A.A.R.P., which is a governmental experimentation
station, and subject of all sorts of conspiracy theories).
Most class A commercial transmitters are in the 50KW range, with
antennas that are mounted several hundred feet high, which limits
exposure to ground based humanoids.

2 meter stations? Please. Most run no more than 100 watts.

RF exposure decreases exponentially as the distance from the radiating
antenna increases. There's a big difference between the incidental
exposure from a 50KW broadcast station a half mile away (and 200 feet
up), and a Keydown running 20 KW, 50 feet away, with an antenna less
than 10 feet up.

RF is RF. ALL RF has the potential to be harmful. The frequency of the
RF only changes the point where the "harmful" level is reached. It is
gnerally accptable that higher microwave frequencies are the worst. But
there are also studies that have found problems with 60 HZ radiation
from high tension power lines.

If you believe that a VHF handheld, with a 5 watt transmitter is
harmful, why is is such a stretch to believe that a 20 KW mobile also is
harmful?

There's a difference between occasionally walking within 1 mile of a
broadcast transmitter, or a radar station, and being 50 feet away from a
mobile 20 Kw transmitter.

>

We're both just speculating what harm will ultimately come to people
exposed to what levels of RF, and at what frequencies. Time will tell.
But I'd hate to take a chance and find out I was "dead" wrong. Call it
playing it safe.

Sure, high power microwave guys all have stories about fried birds, and
rodents. Broadcast transmitter techs have stories about lighting the
"shack" with flourescent bulbs powered only by the RF energy floating
in.It's been common knowlege among the guys "in the business" for some
time. I guess it takes a lawyer to make it public knowlege. But that at
least got the ball rolling for researchers to study the long term
effects of RF exposure, and to try to establish safety guidelines.

That depends on their sense of responsibility. I know *I* would make
sure that my family was not exposed to potentially harmful RF.

You're also making an assumption that hams are just as eager to break
the rules as the outlaw CBers are. So far, that isn't the case on a
large scale. There are small segments of hams that lack the proper
responsibility, but unlike CB, it is the exception rather than the rule.

>
> As in the case of ham mast/tower mounted antennas, the cb attendees are

> exposures.

Those lame excuses for "directional antennas" on vehicles are not
separated far enough to make that much of a difference. There may be a 3
or 4 db difference between the "front door" and the "back door", but it
almost meaningless to someone standing nearby with 20 KW keying up.

If they are several hundred feet away, then they're probably ok.

I have to disagree here. Ham contests were started initially to hone
operator's skill at handling large volumes of traffic, in case of
emergency. A contest is practice for the real thing. I know that today,
that original intention is lost on many hams.

>

> salient value to the general public nor need they have.

The point is that if your "activity" has the potential to interfere
with, or harm the public to some degree, it might be acceptable if there
were some benefit to the general public at large. "just for fun" would
not be seen as a valid reason, by the governing body, which is why this
kind of activity is specifically deemed as illegal. Of course, this
doesn't stop the participants who don't respect the reason we have
rules.

>
> I already know you'll take issue over "reasonably innocent fun".

No, actually not. "innocent" is a matter of perspective.

Since we seem to be making many speculations, here, I could speculate
that many of those "Extras" that you mention, could be bootlegging, or
are "paid for" ticket holders, that were former CBers. More likely, they
are just victims of the same indifference and moral decline that
permeates society in general with increasing regularity.

>

> "Does anyone remember the reason behind such events as "field day"?

Field day was also an "emergency readiness drill". The idea is to have
reliable low power equipment, and be able to erect portable antennas,
and use portable power sources, to establish and maintain for a period
of time, a reasonable ability to pass traffic in the case of an
emergency.

Since Keydowns are a relatively small event, that is deliberately kept
out of the public eye (Hmm, what's an expose on 60 minutes worth
thesedays?), there is not enough concern to warrant "further study". But
I wouldn't want to be around when the "guys" are doing their thing. I'm
not into taking chances.

Get on any channel, in any major metro area, and attempt to ask one of
the power junkies, engaged in his soapbox banter, to please back it down
so that you MIGHT be able to hear your mobile calling you on channel 27,
and you'll get a first hand lesson in "In your face" illegal operation.
I've experienced it enough times. Many of my old friends sold out of CB
over stuff like that. Don't even try to tell me it doesn't exist.

> No, it's more like if these "outlaws" were not so blatent in their

RADIO, not Usenet. This newsgroup is only a fraction of who operate on
the RADIO. I could care less what people here think or do. I only care
about what goes on on the RADIO.

>
> they wouldn't have caused the backlash that they did, by the people that

> differ. But this is the type poetic hype I refer to...backlash indeed.

There are many local "bills" addressing largely an out of control CB
problem. Many of which are below the radr of the national media. The
backlash is there whether you wish to acknowlege it or not.

Again, what people do here is irrelevant.

>
> The difference is that on the radio, a 4 watt "mud duck"'s complaints

> footing.
>
> -Yep, you can shut off your terminal, just like your radio.

Why should anyone have to? Why should a few selfish, inconsiderate
people be allowed to commandere a channel, or a newsgroup? And why
should those who don't care to see/hear it have the only option of
turning it off? You have no more right to the airwaves or newsgroup than
any one else. If you understood the concept of consideration, and
respect, you'd "get it".

>
> There is no power to turn up to drown out dissenters.

> The groups are worse (respect wise) and the on air antics are
> indentical.

So now you're the resident expert on what hams do? For someone that
doesn't like hams, you sure spend alot of time keeping tabs on them. And
for the record, I hear nothing but "normal" conversations on VHF. I
don't operate HF all that much because I don't care for DX.

And despite the moral equivilency arguement, what one group does does
not excuse the other one.

>
> Suppose I don't like it, and decide to put a bullet between your eyes to

Ok, then let me put it a bit differently. Suppose there was a vigilante "Charles Bronson" type that tracked down and shot all illegal CBers. Would you want the police to catch this guy, and uphold the law? Or will you keep your view that it's ok to break laws to achieve your goals?

> But by your own logic, one illegal act to correct another one is
> perfectly acceptable.
>
> -How did you infer that? That is the antihuman's point of view.

No, that YOUR (and other supporters of operating illegally) point of view. If you justify breaking one set of rules, what's to stop you from further "justifications"?

> That was my whole point when I was discussing the "anarchy" angle some
> time back. Once you lose respect for the principles of law, it's only a

Tim there are some undeniable physical facts at play during those so called keydowns. The interesting part about this thread so far is how one group, or individual, contradicts the other, and the real physics at play during the keydown. What does seems clear so far is nobody at those "contests" seems to know for sure what they are really measuring and can prove it. That makes the whole concept of a keydown a rather ridiculous idea since there doesn't seem to be any clear cut, and "consistent" technically logical reasoning, behind how the winner is determined. You have one idea, and there seems to be several others with their own, and yet different from yours. You can't have a true "contest" when even the spectators, much less the contestants, can't understand what is truly going on.

The muting effect could be explained then by most of the sideband energy moving up to the higher order sidebands, which would then lie outside of the receiver passband. The receiver then would "appear" to mute the over deviated signal when in fact most of it just lies outside of the passband. If the above is in fact what is happening then the effect would be content specific. I do know that I can in fact receive standard FM broadcast material, using a 75 KHz deviation, on a receiver set up for 5 KHz. The audio sounds like trash, but I don't experience the muting effect either. However I doubt that anyone would likely experience the effect where the difference is either 2.5 KHz or 5 KHz deviation. I've heard people screw up and use the wrong deviation, 5 KHz, on a 2.5 KHz receiver, and it does come in real loud if it does not distort too much. Some of the newer HT's come with selectable deviations of 2.5 KHz or 5 KHz so it's easy to try some experiments on your own.

Don't get a HH. HH are for only 1 purpose: to WALK around with it. Since
you are NOT going to do that, a Uniden Pro-510 small GOOD CB is all you
need, with a 3' magnet mount antenna you can take from car to fridge top,
with a power supple for house use.

Dave:

Just so that you know, a 20KW transmitter at 27Mhz falls into the accepted safe range(radiation wise), somewhere between 60 and 130 feet. A 5 watt VHF HT does so between 1 and 3 feet. Matter of fact, the RF densities are less with the 20KW at 65 feet, than the 5W VHF, assuming you are using in the conventional manner. Don't believe me?

For the benefit of the group, the "(2)" is the production version of the
circuit board. It's a designation. There is only one radio for sale.

73 to all.

Heh I may be a bit overwieght, thats from being layed up in bed for
well over a year recovering from a head on collision, but if anyone
can hang 50 + sheets of 12 ft 5/8 drywall a day by themselves, or pick
up 3 - 5 gallon buckets filled with plaster with one arm and straight
arm it onto 5 foot scaffolding, then come see me.

Thats what I did for years unti the head on collision, and I still
have the upper body strength as well as speed, try taping a house in
2.5 hours or coating all the seams in 30 minutes.

Dave I myself would like to see CB improve, but what you consider
improvement? I lopve to sit at the radio and BS with my friends here
locally, but when I can not talk across town because some fool decides
to run power, with a radio with clipped limiter and overmodulated
causing to splash all 40, what am I supposed to do?

I know someone will say that I should do the same thing, run power,
"tune up" my radio. Fine all that will accomplish is more crap causing
interference on the bands. then we will have 40 channels that sound
like channel 6. NO THANKS!!!!!!

Personally, I would like to see the 11m band allowed a bit more i.e.
raise the mile limit for contact, maybe a bit of power level increase.
Hell make it SSB only, I've always loved working SSB.

But, in order to make it truly work, everyone has to follow the same
rules, otherwise it will always be like it is right now. People are
moving to the "freeband" to get away from the clutter on the legal 40,
what happens when the "freeband" gets as cluttered, they'll move up
the line into the amateur bands, this is not acceptable. So rather
than raise hell with those who want to preserve their ability to acces
those bands, why not clean up 11m?

None of it has been substantiated, and many of the "problems" associated with EMF from transmission and distribution lines have been disproved. Mostly hogwash, perpetuated by the media for the sake of ratings. Now, this isn't to say I can't go stand under a 345KV transmission line with a fluorescent bulb and make it light, but so what? I can also light it by shuffling my feet across the carpet when the weather is dry. If I believe the media hype, then I would probably conclude that if I shuffle my feet across the carpet, then I could have the same purported "problems."

<"RF is RF. ALL RF has the potential to be harmful. The frequency of the RF only changes the point where the "harmful" level is reached. It is gnerally accptable that higher microwave frequencies are the worst.">

A watt is a watt. The frequency is what determines how safe it is. Using your method of thinking, I would suppose there is a "non-harmful" level of gamma radiation. I don't think so, Skippy! I wont argue the fact that all RF has the potential to be harmful, you are correct in that statement, but to twist things to suit your stance is utter bullshit.

1719. Ten Tec HF Linear Amplifier revisted

Newsgroup: rec.radio.cb
Date: 2002-02-18 16:29:07 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3C712BD3.47845701@qnet.com>
Source record: 116032

Hello All:

There was some discussion a while back on the Ten Tec, HF Amp using a 4CX1600 tube. The main consideration was the initial cost as compered to having lower quality Linear Amplifiers, constantly break and need repair.

In the long run it was cheaper to purchase a quality Linear Amplifier, and have it last for years and years, again compared to lower quality Linear Amplifiers that require almost constant repair work.

495 out of the Aleutian Islands read the posts, and did purchase a Titan II HF Linear Amplifier. Using the Titan for the last few months, Ralph said he has never had a lick of trouble with the Titan HF Linear Amplifier.

His old Clipperton sweet tube amp has been barried at sea without honors, he said. A 5 week repair turn around at at average cost of 300 to 400 dollars, TILT!

If you want to play you have to pay, buts that the price of doing business.

Ralph also added that he has reduced the drive input level, so that the Linear Amplifier does right at 1200 watts output, all day and all night. Its is very enjoyable to have a reliable clean sounding station. Maybe he uses it to keep the beams from icing up?!?!??

Thanks for the input there Ralph.

Jay in the Mojave

Haven't driven over the speed limit lately, have you? You didn't do 21mph in that 20mph school zone did you? Think of all the non-active participants you could have killed!

1721. Is the Radio Shack Vertical an Antron A99?

Newsgroup: rec.radio.cb
Date: 2002-02-18 16:40:15 UTC
From: rons533@dejazzd.com
Message-ID: <3C712DE5.5B1B@dejazzd.com>

I want to put up a vertical and have settled on an Antron A99. At Radio Shack I have located a discontinued vertical identical to the Antron at only $25.00 regular $69.00. Is this really the same antenna made by Antron for Radio Shack? I have searched the archives and found talk about the subject but nothing concrete. Is it "identical" except for the name?

Thanks

If you are suggesting that exceeding the speed limit in a school zone
is somehow trivial then you are truly one fucked-up individual.

personally I prefer the Solarcon version, but everyone has their own
favorite, If you really want a decent vertical, pick up a good 5/8
wave ground plane Maco makes a decent one.

Sounds like a nice story Richard. Maybe that's one "secret" to converting a
CBer to Ham. If they know that they have a few buddies waiting for them on
the Ham bands to ragchew with the resistance factor goes way down.

> As this group illustrates different people are here for different reasons

And this is coming from somebody who was just as sure I was posting forged messages all over Usenet. Since I'm the one sitting on this side of the keyboard I have a much better idea, perfect idea in fact, of which posts with my name attached or not were in fact forged messages. You couldn't tell the fakes messages from the real ones, and now you want to claim "expertise" is declaring whether any of Twisted's posts are fake. Save yourself the trouble Tim. Since you still make causal references from time to time accusing me of Usenet message forgery, and feel you're right, then I can enjoy the same privilege when it comes to Twisted and his insane posts. That goes for the rest of the group as well.

You have a point there. ALL Hams are required by law to do an RF survey of their installation, the with commercial equipment too, and have that data at hand to prove that the station is not exceeding the limits for RF exposure. For cases where the transmitter power is below a given limit and low antenna gain the survey can be skipped. For sites having several transmitters the TOTAL RF exposure for all transmitters has to be accounted for. If nothing else the "spectators" at those silly keydown events can sue the operators for RF exposure limit violations. When the camcorders keep ejecting the tapes on key up a judge and or jury may not need a FSM reading to question the safety of the people at those events.

QST had an article, I think last year, about one group's setup for field day. Part of the site planning required antenna simulations of the fields around all of the antennas. Then a map was made showing where the fences had to go, a keep out zone, to keep field day personnel, and the general public, from being over exposed to RF from the antennas. The issue about RF field safety is being taken seriously.

I can hear a bunch of 'bad citizens' right now transmitting with their
CB echo mikes, roger beeps, and southern drawls on 28.085 and 28.125.

The other day I heard this exchange on 29.025:

W5 HAM: (ending long transmission, turns it to the K3)

CBER: Auuuuuudio AUUUDIOOOOO AUDIIIIIOOOOOOOO <BEEP>!!!!!!

K3 HAM: (makes long transmission, turns it back to the W5)

CBER: Hellooooooo you got a copy I say you got a copy on this AM radio
come on <BEEP>!!!!!

W5 HAM: (obviously hears the interference but ignores it)

CBER: Stuck up hammers I say you stuck up hammers you dont wanna talk
to no AM radio operator heh heh well eat sh*t mother****** <BEEP>!!!

a. They don't know how?
b. They don't have the proper equipment?
c. They don't feel like investing the additional 10 to 50 dollars for an
SWR meter, then the 10 to 40 for a book to tell them how to set it?

Any of the above reasons (as well as others) would be legitimate.

I'm not running from anyone.

If anything, just exposing people for being liars.

Fairly easy to do around here, and why did you avoid the subject again?

Let me rephrase it so that you can understand what I meant. What I meant is
that 135 is not the norm. It's not the norm anywhere in the U.S. If he is
reading that with his meter, either the meter is wrong, or he has major
problems. I've investigated enough damage claims to know that most
electronic devices don't like 135 volts for very long.

Posted, but not in HTML format. Surely you can figure it out. I even used 1 foot for the HT, instead of .5 feet. Sure, if you put them head to head, the 27mhz signal will be stronger, but then again, who uses an HT 70 feet away from them....duh?

Twistedhed wrote:
Oh no.... No way am I going to believe for a minute that the whole attitude of "the outlaw crowd" was a result of legal "taunting" by those that make it their life's mission to remind us what the rules are.

-I am going to ask one more time and file this with the rest of the theater drama that has been offered up here. Where is this constant "in your face attitude" you are suddenly referring to? You are using it as justification for your views and beliefs, but so far the plethora of examples on this board remain to be shown.

Get on any channel, in any major metro area, and attempt to ask one of the power junkies,
engaged in his soapbox banter, to please back it down so that you MIGHT be able to hear your mobile calling you on channel 27, and you'll get a first hand lesson in "In your face" illegal operation.

-Now you have changed the equation by introducing another element...looking for a problem...which confirms what I've been saying all along..you are experiencing the minority of problems, not only that, you are seeking them out and claiming it is an attitude you get in return. Well, if you seek out "problem operators" and attempt to tell them how to act or run their station, I am certain you will be on the receiving end of an attitude.

I've experienced it enough times.

-Seek and ye shall find.

Many of my old friends sold out of CB over stuff like that. Don't even try to tell me it doesn't exist.

-I never said it didn't, but it sure doesn't exist to the extent you cb haters claim it does.

No, it's more like if these "outlaws" were not so blatent in their pursuits of these illegal activities,
-Correct me if I am wrong. This "blatant" flaunting you claim takes place is based solely on reactions from what you read here in response to antihumans, isn't it?

RADIO, not Usenet. This newsgroup is only a fraction of who operate on the RADIO. I could care less what people here think or do. I only care about what goes on on the RADIO.
they wouldn't have caused the backlash that they did, by the people that still respect the rules of common courtesy, if not FCC rules.

-Oh, really? Now you are going to make the two mutually inclusive with each other? There is way less common courtesy among these "antis" you speak of than there is "TALK" (talk, just talk, NOT actions, but talk (type) on usenet) by so-called illegals. You disagree here, Dave? Just check out the "usual" anti posts. Almost each and everyone has an insult or name calling, but at least your MO is now crystal clear and in the open with a claim like that. And speaking of backlash? What backlash? A single bill passed that was used once, by one city? A backlash? I beg to differ. But this is the type poetic hype I refer to...backlash indeed.

There are many local "bills" addressing largely an out of control CB problem. Many of which are below the radr of the national media. The backlash is there whether you wish to acknowlege it or not.

-Doesn't take much except a link to an official site to confirm it, something that hasn't taken place among all these claims...care to ponder why?

Again, what people do here is irrelevant.
The difference is that on the radio, a 4 watt "mud duck"'s complaints are easily overpowered and ignored. On usenet, we're all on the same footing.

-Yep, you can shut off your terminal, just like your radio.

Why should anyone have to? Why should a few selfish, inconsiderate people be allowed to commandere a channel, or a newsgroup? And why should those who don't care to see/hear it have the only option of turning it off?

-Gee, Dave, why should someone have to killfile someone if they don't like their usenet etiquette?

You have no more right to the airwaves or newsgroup than any one else. If you understood the concept of consideration, and respect, you'd "get it".
    There is no power to turn up to drown out dissenters.

-Configuration.

You can't drown out someone no matter what your configuration.

-Your browser, dude, your browser.

The only thing you can do is limit your "receive" (filters).
This newsgroup is only a small segment of the radio crowd in general. I am basing my viewpoint on my experiences as a RADIO operator, not as a newsgroup junkie.

-Fair enough. Look at the hammie groups then take a listen to 2 or 20. The groups are worse (respect wise) and the on air antics are indentical.

So now you're the resident expert on what hams do?

-You're inferences are getting familiar. And off topic. And baseless.

For someone that doesn't like hams,

-Problems today, Dave? I never had a problem with a hammie in my life until I came to this ng, nor have I ever claimed what you just tied to attribute to me, but you can go on inferring anything as incorrectly as you wish, after all, it is your right.

you sure spend alot of time keeping tabs on them. And for the record, I hear nothing but "normal" conversations on VHF. I don't operate HF all that much because I don't care for DX.
And despite the moral equivilency arguement, what one group does does not excuse the other one.

Suppose I don't like it, and decide to put a bullet between your eyes to solve the problem?

-I'd say you're a bit upset and probably prone to violent acts and have more in common with real criminals than those you accuse of being criminals through cb actions.

I suppose you'd hide behind the laws then wouldn't you?

-No, I'd be dead, unless you missed, then you'd be dead. In Florida, we shoot back. Guns are almost mandatory.

Ok, then let me put it a bit differently. Suppose there was a vigilante "Charles Bronson" type that tracked down and shot all illegal CBers. Would you want the police to catch this guy, and uphold the law? Or will you keep your view that it's ok to break laws to achieve your goals?

But by your own logic, one illegal act to correct another one is perfectly acceptable.

-How did you infer that? That is the antihuman's point of view.

No, that YOUR (and other supporters of operating illegally) point of view. If you justify breaking one set of rules, what's to stop you from further "justifications"?
That was my whole point when I was discussing the "anarchy" angle some time back. Once you lose respect for the principles of law, it's only a matter of time before you justify, to yourself, breaking of more serious rules.

-And again I ask why you have no problem when the antihumans discard usenet rules when it fits your MO? After all, it's only a matter of time 'till they break more serious rules and laws, right?

I have broken no "usenet rule".

-I didn't say you did. I asked your opinion on blatant usenet violators as applied to your logic and you avoided an answer.

So I don't understand your yet another attempt at the moral equivilency argement.

-I didn't bring morality into it, you did and you understand just fine.

Dave

It only takes one to cause interference to all. But maybe you should
consult your own Xtal ball and find out just how many of them have SSB
capable radios.

>YOU are the one who spews what happens in a book. I tell people what has
>been found by reading, as well as going out and DOING it.

You tell people what you want, truth or not, just as long as you think
it will convince them that you are some kind of super-tech. But the
-truth- is that you are just a wannabe that doesn't understand half of
what you are pushing off on others. You claim that everything I say
comes out of a book, yet you whine when I don't provide a reference
that you didn't ask for. Or tell someone to use steel wool for a choke

because it was in a -book- and it's obvious that you have never had
any experience with rust. That's hypocritical, Toll. And you are wrong
once again: A lot of what I have to say -doesn't- come from the books,
a lot of it comes from experience. That experience comes from years
and years in the classroom, the lab, the field, and in my own shop.
And my experience has shown me that books are usually good
representations of what really happens. Why is that? Because they were
written based on the same kind of experience that I have gained over
the years. They were written using information provided by technicians
and engineers that have worked in the field since radio was invented.
These 'books' that you so hate are the combined education and
experience of all these people that have learned what they did through
both formal education, practical experience, and trial & error. Do you
honestly think that nobody ever experimented with different ideas? Or
pushed the envelope of practical application? Of course they did, and
they will continue to do so. Most will do it responsibly. They will
respect the lessons already learned, and they will learn those lessons
through books and formal education, and they will supplement that
learning with practical experience. They will learn the proper
language and terminology so others can understand and duplicate their
work. But you are not one of those people, Toll. You just want big
power with little effort and no responsibility. You don't even compare
to a real tech. You think you contribute to the radio community with
your amps and 'bird watts', but you don't. You are just pushing away
everything that has been learned and setting the radio field back into
the dark ages.

>Tell me. when you parallel two 1/4 wave antennas, spaced a quarter wave
>apart,
>both of them tuned individually for 1:1 swr, what happens?
>

>cable?

Where are these mounted? On a vehicle? What's the input impedance to
each antenna with and without the other antenna mounted? Is the
spacing the actual distance between the antennas or is it the
electrical length of the coax? What is the electrical length of the
coax? Where is the tee located along this coax? Are the antennas
in-phase or reverse-phased? Was the SWR checked with the other antenna
mounted? attached to a coax? Was the non-active antenna loaded or
open-circuit?

>LSB
>on the same frequency in common practice. That's all. YOU started in with
>the rest,
>that I was saying SSB was more inferior, et al.

Ok, let's review:

>A. Most people on CB radio are using inferior radios, that DON'T have the
>filtration necessary to accomodate this

I believe this was addressed. SSB uses much better filters than are
used for AM, and the point of SSB filters is to eliminate the other
sideband. If the filter is capable of eliminating the sideband on
transmit, you can bet it can do it with receive, too. And it does.

>B. Most people on CB are using wider radio transmistters, due to defeating
>or cranking up ALC.

And that is their problem for modifying their radio when it shouldn't
be modified. Regardless, those mods have no effect on the SSB filter.
But when others modify their radios like that it can cause a wider
signal to be transmitted (the harmonics generated past the SSB
filter), interfering with the reception of others.

>C. Quite a few people on CB insist of using "half channels" or 5Kc drops to
>escape the rest.

And again, an improper modification. There is also the practice of
'locking' the clarifier, which some claim to give an advantage. It
does not, because it shifts the transmit frequency into another
sideband or channel. Use of the clarifier (or BFO) is, and should be,
limited to receive only. When it is, it works fine, and both sidebands
can indeed be used on the same channel.

>ALL I was saying was that in common use, your statements don't always hold
>up. You
>where quoting textbook theory, when in fact, it doesn't ALWAYS work under
>real world
>conditions.

When 'common use' and 'real world conditions' describe a band clogged
with improperly (i.e, illegally) modified radios, I agree, and I
agreed with it before. I also provided the 'real world' condition that
when you can't get through on one sideband or channel the operator can
exercise the 'common use' practice of changing the channel. And with
SSB there are twice as many places to change it to. Fact.

I wouldn't call Spokane a 'major metropolitan area', but the city
government has enough corruption for a major city. I am not primarily
a CB shop. In fact, I don't even make money from CB repairs because
most are cheaper to replace than repair. Those usually get tossed in
the corner, which now has a couple hundred radios piled up in it and
I'm tossing them out in the garbage. Need any parts?

That depends on your definition of a 'noise'. If a sound must be heard
in order for it to be a 'noise', then no, it makes no noise at all.
That's a very old lesson in semantics, and I'm suprised you even
brought it up. I really should put a spin on that like you do: What do
trees falling have to do with SSB? But, unlike you, I can comprehend
your point. You failed to realize that the standard for CB radio is
for the channels to be centered on specific frequencies, and NOT to be
slid 5kHz up or down.

>When that happens, just change the channel. It ain't

>
>
>No. I am friends with the majority of CB operators in the greater San Diego
>area.

HA! Now THAT'S rich! Let's do the math: There are 6 billion people in the world, but we can trim that by 25% because China and some other overpopulated, underdeveloped countries don't have much in the way of CB radio. According to Jay there are 12 million CBers. So that means one out of every 375 people is a CBer. Ok? Now the population of San Diego is almost 2 million, and a conservative estimate of the surrounding area would add another million to that (you did say "the greater Sand Diego area", didn't you?). So that means that there are at least 8000 CBers in the greater San Diego area. Ok? Now a majority, in the most conservative calculation, is greater than half; or, in this case, more than 4000 CBers. And these are all your friends? Wow, Toll, I had no idea that you were so popular! And you know exactly just how many of them have SSB capable radios? Damn, did you take a memory course or something? Or do you have all these friends in your database? Well, whether using a great memory or a database, I'm sure you can list these friends, can't you? After all, they are your friends, right? So let's see the list? Hell, I won't even hold you to 4000, just list a thousand or so, then I'll contact them and see if they know who Toll Free is. How about it, Toll?

>
>My "keydown clique"...? Please provide proof that most of the people I deal
>with
>are involved in keydowns now?

Actually, I had no idea you had SO MANY friends, and I don't suppose
most of those 4000+ friends attend keydowns, so I'll withdraw that
statement.

>And yes, most of the people I know use the 8719 chassis from Uniden. An SSB
>capable
>chassis.

So you know 2000+ people with an 8719 chassis? That's interesting,
since the 8719 (or, more specifically, the MB8719) is a PLL chip, not
a chassis. But then I had no idea that the MB8719 could only be used
by uniden, and then only for an SSB radio. How many of all those SSB
capable radios use a different PLL or other method of frequency
control?

> Please disprove this, or keep your assinine comments to yourself.

I just did. Now prove that SSB isn't any better than AM. Prove that
running coax inside the mast distorts the field. Prove that...

...fuck this. Go practice your voodoo.

No, I said,

>...You can
>coil it around the mast, but do it at the base of the antenna, not the
>base of the mast.

That's a little different than "wrap it around the mast: bottom line".
It's called a conditional statement.

>I called on you to prove your post first. Of course, running away from
>the challenge is indicative of someone who can't debate the point, or is
>WRONG.

Whose running? And what challenge? It's amazing that we are in
agreement about this subject but you still want to argue it. Oh,
that's right, you said I suggested a specific number of turns but then
I showed you I didn't and you were proven wrong, now you are trying to
save face. Ok, Toll.

>Since you didn't provide the reference asked for, we will have to assume
>your
>WRONG.

You didn't ask for a reference. But you still haven't referenced where
running the coax inside the mast will distort the radiation pattern!

>> >> >You told him the amount of turns,

>> Yep, that's what I said. Notice I didn't say anything about turns.
>
>
>No, but you led him to believe something that wasn't true.

What's not true about what I said? Running the coax inside a steel
mast will -most definately- decouple the shield, even better than
wrapping it around a hundred coffee cans! It 'shields' the shield, and
any RF is absorbed by the ferrous nature of the pipe. It's a fact,
it's used in many practical applications. And no, I didn't read it in
a book, I learned it from real-life experience, as you are so familiar
with.

>Its a "bird watts" thing Sparky. Would it be the same number of turns? A
>different
>number of turns?

If you are making an RF choke, the number of turns isn't critical
because it's not a tuned circuit. But you already knew that, and I
already reiterated it.

>Is it PEP or AVG Bird watts?
>
>Same thing. you better start getting your posts as exact as you hold

>
>As an Engineer, you should KNOW that!

HA! That's funny! If you were going to provide specifics, then why
didn't you mention the coffee can in your first post in this thread?
Instead you suggested using steel wool, which makes a terrible choke,
and a bad choice for an outdoor installation!

I answered the OP's question by providing several options. If he
wanted or needed more specific information on any one of these I'm
sure he would have asked. You, on the other hand, were just adding
crap in order to troll my posts. And it wasn't even accurate or useful
crap; it was just crap.

>
>Since your the learned one, what transistors THAT ARE COMMONLY USED IN CB,
>AREN'T
>emitter ballasted?

Need a list? Ok then, here's a few I just checked:

2N1613
2N3553
2N3866
2SC799
2SC1306
2SC1307
2SC1944
2SC1945
2SC1969
2SC1974
2SC1975
2SC2078
MRF421

MRF426
MRF450
MRF454
MRF455

All these are used, or can be used, on CB frequencies. You will notice that many of them are the common final output transistors in most CB radios. None of them have internal ballast resistors. Now cite that mil-spec you claim to use for your wattmeter. Or do you need a bigger list?

>> >They are there to equalize the currents between the transistors

You don't seem to remember your own posts, so I will help you out:

>When driven to saturation, the BE junction of a transistor will be on just
>as much, if not more than off.
>
>Hence, the transistor is no longer conducting over less than 50 percent of
>the input cycle.

...and:

>> Huh? You are saying that if you drive a transistor into saturation it
>> will increase the conduction angle?
>
>Im saying if you drive a transistor into or above saturation, it will change
>it's
>operating point due to the rectification of the BE junction.

Which means that it was previously conducting at less than 50% (Class C) but is now conducting at 50% or more (Class B or AB).

You want proof that you are wrong? Ok, pay attention:

Current flows from emitter to base but is blocked from base to emitter. That's the basic idea behind rectification. In order for current to flow, however, you need a bias potential. In a ground-base bias scheme, that bias potential comes from the signal. When the signal is below 0.65V (the required bias potential) no forward bias exists, and no current flows. Since this is a ground-bias amp, the signal that is not amplified is the signal BELOW 0.65V; and since 50% of the signal is below ground, the total amount of signal that goes unamplified is the signal below ground PLUS the signal between ground and 0.65V. That's more than 50%, so the conduction angle -- the amount of signal that WILL be amplified -- is going to be LESS THAN 50%. This is fundamental, and it happens regardless of the size of the input signal or the state of saturation of the transistor, because the state of saturation has no reverse effect on the bias potential of the BE junction -- it is simply maxed out on it's current flow. At saturation, the current is relatively constant with respect to the voltage, and any increase of the input potential will only RAISE, not LOWER, the voltage on the base because of the increasing resistance. This does not change the conduction angle because when the transistor falls back out of saturation everything returns to normal, and the cycle continues as before.

So THERE'S YOUR PROOF! It's the fundamental operation of a transistor. If you want to dispute it, then the burden to prove your claim is now YOURS!

Now you say above that ballast resistors don't affect conduction angles at all. Yet this is what you added in your previous post:

>After all, you would know that all modern RF transistors have emitter
>ballast resistors built in.

When any significant resistance is added to the emitter, it will increase the forward bias potential of the BE junction in direct relation to the current being conducted through it. It's a simple E=IR function. When the transistor is off there is no current through the BE junction, and therefore the minimim required bias potential will still be 0.65V; that is, until that potential is met and current begins flowing through it. So regardless of emitter resistance, the amount of time the transistor is off is going to be AT LEAST as long as when there is no emitter resistance. And that means the conduction angle will be NO LARGER than without emitter resistance.

>Or....
>
>http://www-personal.monash.edu.au/~kaminski/ele2262/part-2/part-2b.htm

Your referenced website is about self-biasing a transistor using voltage dividers on the base. I don't even know why you referenced it.

>They teach that in textbooks and some datasheets (although it is pretty much
>taken for granted now).

No, ballast resistors are NOT "pretty much taken for granted now".
They are explicitly stated in the datasheets for several reasons, not
the least of which is the decreased dissipation rating when they are
integrated in the package. You will find that very few RF power
transistors (for the HF band) use ballast resistors because of the
increased risk of thermal runaway on the lower frequencies. Every
transistor has an normal internal resistance, but that's not the same
as resistance added intentionally for ballast. On upper VHF and UHF
that's a different story, but we're talking about CB radio, right? Or
was it microwaves? Radar? Ham radio?

So if ballast resistance has nothing to do with conduction angle, why
did you bring it up at all? You aren't trying to change the subject
again, are you?

<snip repetitive demands for proof>

>.4C45%40earthlink.net&rnum=2

Your boy Bill is correct (for once), you just can't read. NOWHERE does
he state that overdriving the input will push an amp into linearity;
on the contrary, he correctly states that overdriving will cause more
distortion than running Class C. But to get more specific, he states
that "under certian circumstances" a "constant carrier" input can be
made to provide sufficient bias for the BE junction. Absolutely true.

Notice the use of the term "constant carrier". That doesn't include AM
or SSB (or, apparently, "FM PM" since it has "swing"). The steady
input level is what allows the signal to be used to generate the bias
potential, and the circuit must be specifically designed to take
advantage of the input in that manner. It also requires a tightly
controlled input level to avoid under- or over-bias. It can also
distort the input signal by loading if not done properly. It's not a
very good bias scheme, but it does work "under certain circumstances",
and it does NOT work on just any amp by overdriving the input and
pushing the transistor into saturation.

You have some preconceived notions about this entire engineer/tech
relationship. You seem proud that you are not an engineer, and I have
no problem with that. But until you are one, don't talk about things
you know nothing about.

Oh, that's right, you said the same thing to me about keydowns!

Now that is a really silly statement. I'll show you two stations, one with twice the ERP as the other, but with zero percent modulation. Which one do you think will have the greatest audio volume at the receiver's speaker? Hint, it isn't the one with the larger ERP in the above case, which blows a big hole in your argument that keydowns are all about ERP. I don't think you have a clue about what the technical definition of ERP, PEP, and RMS power happens to mean, and how they are measured.

Agreed, Keith. If you have deep pockets, the Mosley 5/8-wave ground planes are hard to beat. Not in performance, but in construction. A well designed 5/8-wave is a 5/8-wave is a 5/8-wave, in terms of performance. Their Devant series cost over $300 though. I'd say try the Solarcon IMAX-2000. I'll provide the link for you "high-rollers" anyway.

Yet another non-response. I'm sure you can mow enough lawns to pay for
a bus ticket, and you don't have to stay there very long. So come on
moped: are you going to go to the RRCB picnic or not?

Careful, Leland. You don't want them to cry about semantics, do you?
You have to use THEIR definitions, even if they change those
definitions in the middle of a thread to suit their arguments!

Come ON, Steve! How long does it take to ask permission from your
mommy to go camping this summer? I will bring a hard-copy of all your
posts (you probably didn't realize that setting the no-archive flag
means nothing to a newsgroup reader). So you probably shouldn't forget
to bring the following:

1. That "report" you got from your LEO friend;
2. Proof that ship-to-shore radio communications is illegal;
3. Proof that I am a child molester;
4. The same attitude that you have in this newsgroup.

Hey moped, I have an even better idea! You can come HERE this summer!
You might like it here. Mark Fuhrman lives nearby! But alas, Butler
and his Aryan nation got kicked out a couple years ago, so it might
not be so great for you over here after all!

So you aren't afraid of a picnic, are you?

1777. Need info on PLL IC for Uniden PC-122/RS TRC-465

Newsgroup: rec.radio.cb
Date: 2002-02-18 23:38:16 UTC
From: davencinNO@SPAMtdl.com
Message-ID: <3c718e72.4291962@news.tdl.com>
Source record: 116139
Cross-posted to: sci.electronics.repair,rec.radio.cb

I have a Radio Shack TRC-465 CB transceiver that looks like it lost
the PLL oscillator IC. At any rate it drags a 5-volt line down to
nothing and doesn't seem to be generating any RF in the process.
The part is a D2824C, and the NPC web page at:

http://www.npcamerica.com/discontinued_part_list.htm

says it's discontinued. The radio appears to be exactly the same
circuit as my Uniden PC-122, so if you know of a replacement for
that one it should work also.

Any help would be greatly appreciated.

Please remove the capital letters to reply. Thanks!!

davencinNO@SPAMtdl.com

yah know dave...what have you been drinking? you want to know what my king james version says about drinking? well how about a few good "scriptural" examples.1) the apostle paul telling timothy take alittle wine for his stomachs sake. ill paraphrase for you, " tim,after a hard day out on the streets preaching the word and getting your ass kicked by the jews,come on home ,pour yourself a glass and un-wind".2) and my personal favorite...jesus at the wedding feast turning water into wine....now, if it is sin-ful to drink wine....then was jesus participating in the downfall of his friends? of couse not,moderation is the key my boy...moderation.i hope you learned something from this dave."he who has ears to hear....let him hear" :)elpasogunslinger

Do a search on 'Uniden Grant' and it should net you plenty of hits. If you can catch either the old XL or newer LT model on sale for about $125, grab it. I bought mine, an XL, for $124.99, brand spanking new. You might also try ebay to see if you can grab a NIB (New In Box) Grant, TRC-485, or older Cobra 148 GTL. I've seen them go real cheap. Good luck to you.

Source record: 116155

http://page.auctions.shopping.yahoo.com/auction/61618822

This auction is for a Cobra 142 40 channel base CB radio. Included in the auction is a D-104 amplified desk microphone. This radio shows some age, but works excellent. It was recently put through alignment procedures at my local CB shop, which has been in business for 15+ years. The audio limiter was replaced, as the previous owner cut it. It now puts out approximately 12 watts AM and 20 watts SSB. Also included are "extra channels", extending the range above and below the normal CB band. The clairifier has been opened to allow you to slide about 5 kc's in either direction, giving you more coverage. The radio features a built in SWR/Power meter. The SWR CAL dial has been modified to act as a "dial-a-watt", allowing you to adjust the output power from almost 0 to the maximum stated above, great if you want to drive an amp. The other items shown in the pictures are NOT included. I have been using this radio for many months, but I am selling it to get money for another, more expensive radio.

DO NOT but a COBRA anything CB these days. They are made in RED CHINA and are JUNK compared to the old ones. The old ones can still be had by me with different names on them (Uniden), or get a Uniden PC-68 or PC-78. They are made in the SAME factory in the SAME country that Cobra use to be made at, before 1995. So you get a higher quality CB made better means LESS problems you will have. My old ones are NOS and over $100 so you may want ot check out your LOCAL Independant CB shop--look up Radios--Citizens Band in the telly phone book! If not call a nearby truckstop.

Why would you want to do this? I know nothing of amps, but from what I can see from the data sheets. Sure you would get more watts with less gain and less efficiency.

What is the length is it? Make sure you can get your $$ back if it don't work or the match is high. It is BASICALLY the SAME THING as an antron, big stick, and other similar design antennas that have no radials. So for $25 it may be a good deal, even though I usually steer all away from RATS ! Dave!!!!!!!!!!!!!!!!

Hello Hippie 459MN:

Yes my comments and suggestions must be irritating Aaron there, what a uncivil and unfriendly reply! But you see aarons comments and replies full of contradictories, and double standards, to the point I would call unstable, pity. Maybe takes this stuff to seriously.

The desert I think would be a good call, especially near Vegas or even Mojave. Like I said we could camp out, and then hire a bus to take us in to Las Vegas or even Los Angles for some night life.

But again I am sure everyone will be looking for the a big RRCB Get together BBQ, and social hour and social guzziling. I know group photos of different combinations of people will be the hot set up. I want one with Tollfree to show how much better looking I am compared to Tollfree.

We could set up a place with a mic and have everone introduce them selves. With the music in the background we could even have a dance, under the stars.

Oh yeah this could be the RRCB social event of the year.

Jay in the Mojave

I have ONLY 1 left NOS pre-1995 Cob.29 left, BUT it says Uniden PC-76 on it.
Same identical board as the OLD Cobra 29. E mail me @ truth@planetc.com for
price. I have a few old PC-66a's left & such--same as the OLD 25. Those
are $130 each, untouched, 2 different types left. More for the PC-76.

I have five UHF hts that are motorola made for Radio Shack.These are work style radios and work great.Two of them need replacement batteries which are dead.They are 7.5 volt batteries.I am asking $200.00 shiped in the USA.I also have a Motorola Radius SP-21 VHF that does multi channels.I will throw that one in also.It works great and uses the same batteries.I do have a dropin charger and two wall warts.No paperwork or boxes.
Email me or call 978-281-3359 use *82 in front of the number.I am interested in trades for particular police scanners.

these are brand new 9 wire mic cords motorola real heavy duty.
Replace that skimpy mic cord with a nice LONG about 12' stretched out.
These are ideal for any mic give yourself some extra play tired of
reaching for something and your mic slipping out of your hand because of

a short cord. I have what you need.
20.00 shipped to your location. Do have a pic

I have for sale two Yaesu hts.One is the dualband FT-470 that comes with several batteries,charger,box and paperwork.This radio is in execelent shape and works flawlessly.Its a great radio for someone starting out,as its easy to program and work.I am asking $225.00 shipped in the USA.
The second is a Yaesu VX-5r triband that has box,manual and charger.This radio does mars/cap and freeband.It is a little finicky when in vfo mode but does work ok.I think it may be a bad solder joint with who ever done the mod to it.Anyway I am asking $225.00 for it shipped also.
I am looking for a Bearcat scanner,either the 3000 or the 9000 model which I would trade for one of these radios.I am also interested in the 1000 channel scanner that Radio Shack puts out.
Let me know what you may have that may interest me.(Triband mobiles etc?)
Email me or call 978-281-3359 dial *82 first.

Outgoing mail is certified Virus Free.

Not a bad choice either.
I'm a well known cb'er in that town. Lots
of place to stay, could camp just outside of
town or even Carson City wouldn't be bad.
Jay would fell at home there, looks just like
desert.

This is the sideband radio that has that special boards in it and has the dual antenna inputs.This radio is in great shape and comes with the hand mike and the Turner Expander 500 desk mike.It sits here collecting dust as I turn it on about once a week.I can't stand listening to the jerks around here,so its for sale.I am asking $250.00 and a little for shipping or will be interested in a trade for a high end police scanner.
This is the GE SuperBase not the junk.Email me or call 978-281-3359 use the *82 before the number.

Outgoing mail is certified Virus Free.

An SWR bridge is $29.95 at Radio Shack.

> c. They don't feel like investing the additional 10 to 50 dollars for an
> SWR meter, then the 10 to 40 for a book to tell them how to set it?

$30 for SWR meter (Radio Shack)

plus

$0 for instructions on the web (http://www.roity.com/rc/swr.html)

= $30 total

...versus how much for an "professional install"?

> Any of the above reasons (as well as others) would be legitimate.

Because you can't admit you're wrong?

Hello Landshark: Yes Reno / Carson City area would be nice place.

There's one Casino that invited us Not back once, but I am sure all the glass windows have been replaced, and they have forgotten all about us!

On the way up to Reno there are a few pull outs for fishing in a neat stream, on the California side. We would always spend a day or two there first before hitting Reno. Had fresh fish for BBQ'in during the social BBQ and Cocktail hours, and hours.

That was when Lyle was kicking everybody ass in "Rare Bare"

Use to make the Reno Air Races all the time. I would rent a Motor Home and haul ass up there. I was in with a great bunch of guys that knew the pit crews for a few of the racing aircraft. They would get us pit pass's and we could walk all around and take neat pictures of all the neat-Oh air planes.

Some of the big dollar sponsored air plane crews had private parties catered in down town Reno, in a fancy (wipe ya feet) Casino, oh man did I get the impression we didn't belong, but no one said anything, bithcen! The crews got out of hand right off the bat, kind of funny the big race was always on the day after, on Sunday.

But always plenty of Par Ta ing in the camp grounds.

Use to get all the neat crew frequencies from the guys selling handheld scanners just outside the main fence. Boy is Patty a something or other when she doesn't get her own way, more on that on the ol eye ball.

Man what a party that was.....

Having met you face-to-face, I admit you are a, well, If I may say, "A fine looking man". That being said, I refuse to dance with you. :-)

Hey! Got that modified Super Penetrator up in the air last weekend and it's da bomb. Great work Jay! I'm telling you, I have gotten some great reports from all over. The match is awesome too. No need for any power to be copied over here.... :-)

(I'm still not gonna do any dancin)

Hello Jeff:

Ok no dacing. I'll bring the girl friend she always likes get togethers, social events, and what not. Even PTA meetings, thats where I tell em to give the kids away at very eary age, so that they can't pull you out of a line up, ... but thats another story.

You Highly Modified Penetrator 500, will have several more dB in transmit and receive signal levels, due to less loss in the Modified Impedance Matching Device. Which is adjustable.

The Trombone 180 degree piece is a fine tune of the antennas length, and the shorter sideways U shaped is the Impedance Matching Inductor, Adjust the U for the lowest SWR, and the Trombone for your operating frequency, they work together.

Thanks for the input there.

Jay in the Mojave

Hello Bert: I ordered the Mosley Devant assembly instructions, to see if they had anything new and wonderful, cost 10 bucks. This antenna has been advertised in old 1960's, 1970's, and 1980's CB Magazines.

I have never seen any of the Devant Special, or Devant 1, 5/8 antennas.

The Devant Special has a Top-Hat, that slightly loads the antenna capactivly, allowing for less Impedance Matching circuitry, allowing for less loss in the matching circuit. And is advertised a having 3.4 dB gain as compared to the Devant 1, at 3.0 dB, that does not have a Top-Hat assembly. No dB gain references are given, but are probably dBi figures.

These antennas use only 3 ground plane radials, and I have measured the difference between 3 and 4 ground plane radials, as the 4 ground plane radials, give the antenna a wider bandwidth.

They use what they call a "Induct-O-Match" Impedance Matching, parallel then series inductor matching system, same as seen on the MaCo V5/8, the Penetrator 500, and a few other antennas.

The antenna is 19 feet tall, 228 inches tall. The Penetrator 500 is 257 3/8 inches tall. The performance is probably still very close, even being shorter.

But its a light weight, none reinforced, tubing fitting into smaller tubing type construction. I am sure it can be easily reinforced, not like the foreign
type antennas, with there cheap vertical ribbed tubing, and odd ball sizes.

Its probably a good antenna.

I have a I Max-2000 that a guy wants Ground Plane Radials installed onto it.

We will see.

1827. golfer and the frog

Newsgroup: rec.radio.cb
Date: 2002-02-19 12:27:06 UTC
From: arcweb@bnnorth.net
Message-ID: <3c724343.1441006@news.bright.net>
Source record: 116187

A man takes the day off work and
decides to go out golfing.

He is on the second hole when he
notices a frog sitting next to
the green.

He thinks nothing of it and is
about to shoot when he

Hears, Ribbit 9 Iron."
The man looks around and doesn't
see anyone. Again, he
hears, "Ribbit 9 Iron." He looks
at the frog and decides to
prove the frog wrong, puts the
club away, and grabs a 9 iron.

Boom!

He hits it 10 inches from the
cup. He is shocked. He says
to the frog, "Wow that's amazing.

You must be a lucky frog, eh?

The frog replies, "Ribbit Lucky frog."
The man decides to take the frog
with him to the next hole.

"What do you think frog?" the
man asks. "Ribbit 3 wood."

The guy takes out a 3 wood and,
Boom! Hole in one.

The man is befuddled and doesn't know
what to say. By the end of the day,
the man golfed the best game of golf
in his life and asks the frog,
"OK where to next?"
The frog replies, "Ribbit Las Vegas. "

They go to Las Vegas and the guy says,
"OK frog, now what?"
The frog says, "Ribbit Roulette." Upon
approaching the roulette table, The man
asks, "What do you think I should bet?"

The frog replies, "Ribbit $3000, black 6."

Now, this is a million-to-one shot to win, but
after the golf game the man figures what the heck.

Boom! Tons of cash comes sliding back across the table.

The man takes his winnings and
buys the best room in the
hotel. He sits the frog down and
says, "Frog, I don't know how to repay you.
You've won me all this money and
I am forever grateful."

The frog replies,

"Ribbit Kiss Me."
He figures why not,

since after all the frog did for
him, he deserves it. With a
kiss, the frog turns into a
gorgeous 15-year-old girl.

"And that, your honor, is how the girl
ended up in my room. So help me God
or my name is not William Jefferson Clinton."

How did I "twist" anything? From an RF perspective, higher frequencies
(I.E. microwaves) are worse than low frequency H.F.. What part of that
is not true?

What determines "harm" are the power and the frequency, and the distance
from the radiator.

No one is "looking for a problem" The "problem" is there wiping out the
whole band for the rest of the people trying (however vainly) to
operate. It only takes one "power junkie" to ruin the band for hundreds
of people in the vicinity.

When someone asks (axe'd?) someone politely to back it down so that the
rest of the mere mortals can operate on the band, and he gives them
attitude back, what does that say about this person?
I'll save you the trouble; Rude, inconsiderate, selfish, self centered,
egocentric, narcisistic etc. Not a person that I'd want my kids
emulating. There is NO excuse for this type of behavior, no matter how
many spins you want to put on it.

> I've experienced it enough times.
>
> -Seek and ye shall find.

It's there. It finds us. It's hard to ignore massive bleedover.

>

Sticking your head in the sand and denying what is a fact in many areas
doesn't change things.
And for the record. I don't HATE CB. I have many fantastic memories of
fun with CB. I do hate what the band has degenerated into, and the
relative few ignorant people that managed to ruin the fun for the
remaining people that aren't into "extreme" CB.

You still cannot "turn up your browser" and drown out anyone. You cannot
stop other people from posting no matter what your configuration setting
are. The only thing you can do is limit what you see, by way of a kill
file. But that is analogous to the receiver on a radio.

> -I didn't say you did. I asked your opinion on blatant usenet violators
> as applied to your logic and you avoided an answer.

I didn't avoid an answer. My comment applies to the way I handle myself
on Usenet. I cannot speak for anyone else in this regard. I don't belive
in breaking usenet rules any more than I believe in breaking FCC rules,
or at least the intent of them.

>
> So I don't understand your yet another attempt at the moral equivilency
> argement.
>
> -I didn't bring morality into it, you did and you understand just fine.

This is what I understand. You're attempting, by using the moral
equivilency arguement, to make the case that someone who routinely
breaks Usenet rules, has no place to complain about someone else
breaking FCC rules. The flaws in your position are:

1. By your own logic, since I've broken no usenet rule, you have just
given me free license to complain about FCC rule breakers (thanks!).

2. The moral equivilency arguement is weak, since 2 wrongs do not make a right (but 3 lefts do!;)). In other words, if one person breaks one law, it does not give you the right to break another one.

BTW, you really need to improve your browser, or your editing skills. You routinely cut and paste my quotes out of context and order. I usually just snip those out since they've become impossible to comment on without rearranging them again, and I'm just not that motivated.

Trying to explain things to certain people on this group is a lot like trying to explain the operation of the light bulb to a caveman. Those are the kind of people who can't accept anything, or learn anything, except by reinventing the wheel in their image. Then they're still likey to get it wrong.

RatCrap used to sell a version of the Shakespear "Big Stick", colored
a lilght blue.

Way to tell what it is:
If it's in two pieces, it's a Big Stick copy.
If it's three pieces, it's an Antron 99 copy.

Performance-wise there's not much difference, although IMHO the Big
Stick seems to be better made (stronger). Either way, for only $25
it's probably not a bad deal.

I'll remember that, but I try to
stay away from fast food places. There
is a Claim Jumper in Reno though, it's
pretty good.

NO, you are echoing the LIES of the catholic church! When it was prohibited, the NERDS did not buy it, which made it safer out here. With THE GOVT. selling it (in violation of Rom. 13), ALL the nerds can drink up, causing more accidents, death, and future sales to CB's will be cut down because of it. I often think of what would of happened IF they kept Prohibition in. We would have a LOT more people alive today IF they did! Dave!!!!!!!!!!!!!!!!!!!!!!!!

I didn't avoid an answer. My comment applies to the way I handle myself on Usenet. I cannot speak for anyone else in this regard.

-You can't offer your opinions on usenet troublemakers but you freely offer them on said cbers? Pretty selective.

I don't belive in breaking usenet rules any more than I believe in breaking FCC rules, or at least the intent of them.
  So I don't understand your yet another attempt at the moral equivilency argement.

-I didn't bring morality into it, you did and you understand just fine.

This is what I understand. You're attempting, by using the moral equivilency arguement,

-No. What I have always maintained is one can't be the morality cop of the cb or of usenet.
You indeed claimed that rulebreakers have no respect for the law and asked what is stopping them from moving on to larger crimes.I asked for your opinion on the usenet scofflaws using your analogy and comparisons and you are having a difficult time avoiding an answer and maintaining an appropriate balance where you present a perfect selfcontradiction.

to make the case that someone who routinely breaks Usenet rules, has no place to complain about someone else breaking FCC rules. The flaws in your position are:
1. By your own logic, since I've broken no usenet rule, you have just given me free license to complain about FCC rule breakers (thanks!).

-What does that have to do with it? I DX on 555 regularly. How does that preclude me from reporting anything to the FCC?

2. The moral equivilency arguement is weak,

-Agreed. Put it to rest.

since 2 wrongs do not make a right (but 3 lefts do!;)). In other words, if one person breaks one law, it does not give you the right to break another one.

BTW, you really need to improve your browser, or your editing skills. You routinely cut and paste my quotes out of context and order. I usually just snip those out since they've become impossible to comment on without rearranging them again, and I'm just not that motivated.

-Try staying on topic and you may be so inclined.

The results were posted. Did you not use the correct parameters? Now can
you understand how a 5 watt HT next to your head causes a greater rf density
than a 20KW mobile at 70 feet? The facts don't lie. Now then, the above
being proven, I really see no need for a 20KW CB mobile.

Source record: 116212

I dunno what makes one so clueless as to act as such. I have found that in any group a certain pattern exists that is considered to be the "norm" of the group. The majority of regs of a group usually accept certain deviations of the norm to a point, then it is no longer "generally" accepted.

This group is made up of varying individuals from across the globe with various levels of experience and personalities. One does not claim membership by talking about only what they want to hear, we belong because we respect each other (until given reason otherwise) and have common interests.

The majority of us are interested in cb radio and whatever is associated with it's use, not debating laws whether aspects of it or morality parts should or should be accepted in society like some would wish to do. It is the repeated few of the minority who try only to steer the conversation toward legal or moral issues. They have their own agenda.

To keep responding to trolls and other malcontents in turn causes the group to become one big wet spot for the trolls which has resulted in scaring away the real contributors and many gathering in moderated forums and in email. Rec.radio.cb is continues to be entertaining at times..nothing is more gratifying than watching a troll whither away and cry oceans of excuses when they get no reply. When one tells another to "guess" their agenda, nothing else need be addressed.

We all (well, most of us) have something to share concerning the hobby. Not forgetting about respect does not mean there isn't room for discussion of differing opinions or even the occasional flame....some come preoccupied with their own agenda and it doesn't concern cb at all. It's those of us that don't sweat the small stuff that really bugs 'em. Keep the dogs hungry.

>Hello Bert: I ordered the Mosley Devant assembly instructions, to see
>if they had anything new and wonderful, cost 10 bucks.

Ten bucks!!! At least Maco lets you download theirs off their site.

>This antenna has
>been advertised in old 1960's, 1970's, and 1980's CB Magazines.
>

Yeah, I have a bunck of old CB magazines fron the 70's. I realized that my very first base antenna was a Cushcraft CX-1000. It looks like a Maco V58 without the radials. It was advertised as having 3.75dB(?) gain. Probably a 1/2-wave. Worked well though.

>I have never seen any of the Devant Special, or Devant 1, 5/8 antennas.

I have, on a former neighbor's house. Gotta say...it did look good. I'll likely never own one at that price though. Here's my 11-meter summer project.

http://www.gopherlink.com/DeltaXray/hfantenn.htm

>
>The Devant Special has a Top-Hat, that slightly loads the antenna
>capactivly, allowing for less Impedance Matching circuitry, allowing for
>less loss in the matching circuit. And is advertised a having 3.4 dB
>gain as compared to the Devant 1, at 3.0 dB, that does not have a
>Top-Hat assembly. No dB gain references are given, but are probably dBi
>figures.

Sounds good. :-)

>These antennas use only 3 ground plane radials, and I have measured the
>difference between 3 and 4 ground plane radials, as the 4 ground plane
>radials, give the antenna a wider bandwidth.

I'm only on chs. 36 through 40 now. I remember an old Archer (Radio Shack) CB base antenna that used a similar configuration.

>They use what they call a "Induct-O-Match" Impedance Matching, parallel
>then series inductor matching system, same as seen on the MaCo V5/8, the
>Penetrator 500, and a few other antennas.

Just a different shape, eh?

>The antenna is 19 feet tall, 228 inches tall. The Penetrator 500 is 257
>3/8 inches tall. The performance is probably still very close, even
>being shorter.

I'd love to find an old AS M-800 Super Penetrator. That was a 5/8-wave. See, I do my homework...sometimes. I still have that M-400 NIB. :-)

>But its a light weight, none reinforced, tubing fitting into smaller
>tubing type construction. I am sure it can be easily reinforced, not
>like the foreign
>type antennas, with there cheap vertical ribbed tubing, and odd ball
>sizes.

For $300, it shouldn't need to be reinforced.

>Its probably a good antenna.

For $300... (You get the idea.)

>I have a I Max-2000 that a guy wants Ground Plane Radials installed onto
>it.

Can you do this? I don't think the matching system employed was meant to be used with radials. Copper just sent me an advertisement about their new ground plane attachment bracket for the IMAX-2000. Dunno, you tell me?

>We will see.

Lemme know.

>Jay in the Mojave

That's "Great" Mojave! Take it easy, Jay.

hi all,

i'm new to the CB world so please pardon my ignorance. i recently purchased a cobra hh 34 on ebay. i want to increase my signal strength by getting a better antenna. cobra makes a long range portable antenna, but i'm more interested in a semi-permanent set up. i live in a dorm, so i won't be able to mount the antenna outside, but i was wondering what the best antenna to get would be. thanks a lot.

Randy how far away is the operator of the 27 mhz signal you are not comparing apples to apples, In the HT equation you are comparing the operator with the 20 kw mobile your using 70 feet away this is not a fair comparision, the 20 kw mobile op is within a few feet of the antenna radiating 20 kw punch in the numbers again see what you come up with sir.

>i was wondering what the best antenna to get would be. thanks a lot.

You'd only be ignorant if you didn't ask. The answer to your question is a 1/2-wave dipole. You can build one for practically pennies or purchase a pre-assembled one specifically made for indoors off ebay. There are lots of different sites outlining the construction of a simple 1/2-wave dipole. Just do a search on 'dipole construction.' Here's one.

http://hamgate.sunyerie.edu/~larc/Dipole.htm

Here's the ebay variety.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1333692151

Note: I've made contacts with Northern Mexico and Ireland using an indoor dipole and 12 watts. You can get surprisingly good results from a simple dipole. Good luck to you.

Ain't NO doubt, Jeff! I think he is one of those OLD ladies (males) around
45-60 years old that make the Old cranky ladies look like a nice little
girl! I ain't done nuthin' to the Rand, and he comes @ me like he's
Chairman Mao's son!
Dave!!!!!!!!!!!!!!!!!!!!!!!!

> base antenna that used a similar configuration.

Yes Radio Shack sold a Hy-Gain CLR-II, a almost 5/8 wavelength long
vertical, with 3 ground plane radials. This was the second attempt by
Hy-Gain to have a 5/8 antenna. The first 5/8 vertical from Hy-Gain was
called the "Golden Colinear" it had a single point mount that held the
vertical element, that broke, after a short period of time, I have never
seen one of these antennas, just the advertisments.

Of course next came the Penetrator 500, that was advertised from Hy-Gain
to take 1500 watts, since the CLR-II had a small impedance matching coil
on a small round circuit board, mounted in the base of the antenas lower
insulator, that would easly burn up with to much power.

> >They use what they call a "Induct-O-Match" Impedance Matching, parallel

> do my homework...sometimes. I still have that M-400 NIB. :-)

Yeah ah lot guys would love to find a new Penetrator 500 new in the box.
I have a few of them. I have bought them off the internet and such. Some
where in great shape, and some didn't have one straight piece of tubing.

> >But its a light weight, none reinforced, tubing fitting into smaller

For a vertical element that long, I think a few extra pieces of tubing
is not out of line.

> >Its probably a good antenna.

Its a possibility that the impedance matching rings may only need a
slight tweak for the SWR adjust-O, don't know till I modify it and test
it.

Hello SD Jones: Then fine don't read the ng anymore.

This is a public forum, all the nut cakes will be here, just like going into a bar, there's the Bikers, Truckers, Cowboys, Construction Workers, and the normal people. You don't have to set with any of them.

Usually after a while or so, you'll ba ah listin to the Juke Box, Rockin n Rollin, orderin a few rounds, drinkin a few rounds, havin a great time. Shootin a few games of pool, shootin darts, arm wrestling, Peein in the womens head, because there's to many dudes in the mens room, oh you'll fit in.

Or ya can set on side lines and bitch, moan, complain, whine, weak dick out, like the goofballs.

I don't see you putting in any really effort to help make the ng more attractive or interesting. Bitch all you want, it ain't gonna help!

How about some great CB or Ham radio postings!

Rock on!

Jay in the Mojave

Well I hopped on the FCC web site this evening between the N Ohio disaster services zone meeting, and installing a new OS on a friends computer and saw that they posted my call, KC8TCQ. Now I need to start getting some equipment around, i.e. setup so I can play with PSK-31 on 2m and 6m, as well as more radios heheh. But it's a better expense than some other things I could be blowing money on.

The worst one I encountered was the unfortunate Craig Larsen who was WA□ROY and was, of course, called Roy more often than Craig. When he got the Extra he applied for a new call of some sentimental significance and got it.

So on a bright Monday, Craig came on the repeater with 'This is K&#65533;NR' and
a co-worker and good friend came back 'K&#65533; Name's Roy' from W&#65533; Rotten Lid.
You could hear Craig shrivel without the radio.

I admit to being the King of Qs and it seems to have been spread to you.
My current one is the only one I ever had that did not have one and you
are not my first friend to get one.

Actually it is a decent one but I had to give you a little shit or they would kick me out of the Extras Union. That is what 1x2 Extras do.

And I will warn you in advance that you will get some newbie shit from the OTs because that is what OTs do. It is easy to misunderstand for someone coming in at Chapter 78 of a very long and traditional book. Back when call signs were strictly sequential it was far worse.

The truth and reality since the Tech came out in 1951 is that one joins the fraternity with the General and that any number of people get lost on VHF phone never to be seen or heard of again. And the fact is that Techs have a really crappy renewal rate. So it is kind of assumed, and may well not be true in your case, that the object of the exercise is to get to the General asapy. So you will be met with a lot of cheer early with some gentle prodding (there will be at least one bitching about ex-CBers; tell

him to sit on a large tack and tell him I said so) and the prodding will get a bit more blunt and then outright nasty before you are simply written off as a lost cause. As there are only so many hours in a day to help people just as medics have to do one at a time, the process is comparable to triage. Don't take it personally as it really isn't intended that way; it is to keep you from falling down a manhole.

Just what will happen when Element 1 goes bye-bye in a few years is anyone's guess but my experience from being around in the seniority days tells me that the old order will not die without a fight.

Dick N&#65533;BK

Hello All: Getting more than just a few e-mails on this one, again.

Ralph is a RRCB reader and chooses not to post here, for what ever reason. I have talked to him on the phone once last summer, seems to a shy type of guy.

Ralph uses a Icom radio to drive the Ten Tec HF Amp, and he uses most all the bands. And is a big time shortwave listner type fan also.

The point that Ralph wanted to make is that the price of good equipment is not over priced. At times he has no way to mail off his equipment, so having reliable equipment is a must, and even has back up stuff. His old amp needed repair at least 1 to 2 times a year, and it cost more to repair than to have the good stuff that didn't break.

Hope I got it right, ah Ralph!

Just an opinion. I have compared DX work with both an A99 and my Shakespear ABS-1600. My neighbor has the A-99 with my 148 and his 148 I managed to hit Australia and he didnt. Just an opinion. BTW the ABS is a 5/8th wave the A-99 is a 1/2 wave. Bill

Damn, the impedance will vary based upon height over ground. That could well change what is 'resonant' or not. I still miss that rhombic 600 feet on a leg and 200 feet in the air. That thing smoked - and I don't want to hear about a yagi.

Interesting point, but WTH. You can buy the callsign of your choice now, and with the new 5 WPM CW, the theory isn't gonna hold many folks back. Ever seen a complex (resistor, inductor, AND capacitor) thrown into a test? Naw, something like a whatchamacallit farad capacitor with an I-forget inductor and a resistor - and they ask you what the impedance is - um, 20 + j50, 20 - j50, 50 + j20, or 50 -j20. You don't even have to figure the darn thing out. What is real and what is imaginary? Or, make that inductive or capacitive.

I do plan on going for my general as soon as I have the code down, and
I am already working on that. I want to play around with QRP on HF. I
am already looking into getting the gear needed to play with PSK-31 on
6m and 2m.

I was amazed last night that I was able to hit the fulton county club
repeater in Delta last night for the midnight madness net, for the
time being all I have is a 200wm HT that I got for X-mas while in NYC.
There are some people from michican on the FCARC repeater.

I have seen no real evidence of "usenet rule" infractions (Whatever they are). I HAVE seen many instances of FCC rule infractions. Is there even a governmental agency assigned to enforce "usenet rules"? Somehow I doubt it, which makes this an apples and oranges comparison.

I have not contraticted anything. You keep trying to make the moral equivilency case (And please stop getting hung up on the word "moral"), where "Gee if he can break a usenet rule, then I'm justified to break an FCC one". Like I said before, 2 wrongs don't make a right. You can't make your case to the feds by saying "Gee, I DX on 555 because Voobner (or whomever) abuse usenet".

Hello Dave: I haven't got a clue.

I bought a few of the Astron Switching type SS power supplies, they come in 25 and 35 amp verisons, and exremly quiet!

125 dollars for the 25 amp, and something like 135 dolars for the 35 amp power supplies. They are small but work great, and have the volt and amp meters on the face of the chassie. Looks bitchen!

I didn't avoid an answer. My comment applies to the way I handle myself on Usenet. I cannot speak for anyone else in this regard.

-You can't offer your opinions on usenet troublemakers but you freely offer them on said cbers? Pretty selective.

I have seen no real evidence of "usenet rule" infractions (Whatever they are).

-Well, off the top of my head, we could use your example concerning morality, but you seem somehow unable to apply it to usenet. Since you either A) Choose to have your head in the sand and claim you never witnessed any usenet infractions, B) Plead ignorance concerning what constitutes usenet abuse but freely interpret what defines morality, or C) are so far into denial or so closed minded, any continued debate on the subject with you is moot since you refuse to acknowledge what takes place. Your ISP has a TOS agreement and so does usenet concerning usenet posts and what constitutes usenet infractions..I suggest you read over them at least once since you did agree to abide by the terms set forth. Once you educate yourself on what constitutes usenet abuse of rules, apply what you have been trying to apply to cb all this time...your choice of the."morality" concept, to the board , and do try to come back and offer your opinion on the original question posed, now that you are armed and equipped with the information to somewhat educate yourself on that of which you already agreed to.

I HAVE seen many instances of FCC rule infractions. Is there even a governmental agency assigned to enforce "usenet rules"? Somehow I doubt it, which makes this an apples and oranges comparison.

-Pure sophistry.

-I didn't bring morality into it, you did and you understand just fine.You indeed claimed that rulebreakers have no respect for the law and asked what is stopping them from moving on to larger crimes.I asked for your opinion on the usenet scofflaws using your analogy and comparisons and you are having a difficult time avoiding an answer and maintaining an appropriate balance where you present a perfect selfcontradiction.

I have not contraticted anything. You keep trying to make the moral equivilency case (And please stop getting hung up on the word "moral"),

-"I" keep bringing it up? Hoo-boy, you need a rest. You brought it up, I just asked you to apply it to usenet and you pleaded ignorance. Let's

look at it again, shall we?
"You indeed claimed that rulebreakers have no respect for the law and asked what is stopping them from moving on to larger crimes.I asked for your opinion on the usenet scofflaws using your analogy and comparisons and you are having a difficult time avoiding an answer and maintaining an appropriate balance where you present a perfect self-contradiction."
Pretty simple stuff.

where "Gee if he can break a usenet rule, then I'm justified to break an FCC one". Like I said before, 2 wrongs don't make a right. You can't make your case to the feds by saying "Gee, I DX on 555 because Voobner (or whomever) abuse usenet".

-That is "your" analogy, not mine, although the expressly implied choice of logic utilized somehow resonates perfectly with you.

1. By your own logic, since I've broken no usenet rule, you have just given me free license to complain about FCC rule breakers (thanks!).

-What does that have to do with it? I DX on 555 regularly. How does that preclude me from reporting anything to the FCC?

Boy, talk about missing the point entirely.

-Your present point appears to be to distance yourself as far as possible from the morality issue you keep brought up.

2. The moral equivilency arguement is weak,

-Agreed. Put it to rest.

I will when you stop bringing it up.

-Once again, you brought it up and for some reason are extremely uncomfortable having it being applied equally. You may have thought about that prior to bringing it up in conversation, but agreeing and nodding your head in affirmation would be expected from one who doesn't read the fine print but agrees to the terms of a legal and binding contract.

-Try staying on topic and you may be so inclined.

I am on topic, even if you continually miss the point and can't seem to grasp the moral equivilency concept.

Message-ID: <kZRc8.7129$w67.943614@cletus.bright.net>
Source record: 116082

A drunk stumbles along a baptismal service on Sunday afternoon down by the river.

He proceeds to walk down into the water and stand next to the Preacher. The minister turns and notices the old drunk and says, "Mister, Are you ready to find Jesus?"

The drunk looks back and says, "Yess, Preacher..I sure am."

The minister then dunks the fellow under the water and pulls him right back up. "Have you found Jesus?" the preacher asked.

"Nooo, I didn't!" said the drunk.

The preacher then dunks him under for quite a bit longer, brings him up and says, "Now, brother, have you found Jesus?"

"Noooo, I did not Reverend."

The preacher in disgust holds the man under for at least 30 seconds this time, brings him out of the water and says in a harsh tone, "My God, man, have you found Jesus yet?"

The old drunk wipes his eyes and says to the preacher... "Are you sure this is where he fell in?"

Average Power at the Antenna 20000.000 watts
Antenna Gain in dBi 1.10 dBi
Distance to the Area of Interest 5.00 feet
Frequency of Operation 27.000 MHz
Are Ground Reflections Calculated? No
Estimated RF Power Density 88.2777 mw/cm2

Controlled Uncontrolled
Environment Environment
Maximum Permissible
Exposure(MPE): 1.24 mw/cm2 0.25 mw/cm2
Distance to Compliance
From Center of Antenna: 42.33 feet 94.59 feet
Does the Area of
Interest Appear to be
in Compliance? no no

Hello everyone!

First, I want to thank those newsgroup members here who took time to respond to my initial post here asking for recommendations on CB radio base stations! THANKS!

I am in the process of negotiating a purchase of a CB base station from one of the forum's members, and I need HELP in ascertaining whether this unit is LEGAL! I don't want to prchase a unit that will ultimately land me a hefty fine with the FCC!

The unit is known as a "M6," and here is the description from the aforementioned member's homepage:

ooooooooooo

JIL SSB-M6 Sideband BASE STATION. Made by Cybernet in Japan 1977--same board as Lafayette Telsat SSB-140, Midland 79-892, Penneys 6247, RCA, GE, Kraco. Will do 12-13 watts dead key when tuned up, 17.5 ssb watts. O2A Chip capable of getting every channel from 32 below 1 to 99, not missing any! (and more for Hams). This radio IS better than a cobra 2000 ! Real wood on the sides, black grey & alum. front & woodgrain metal top. 40 Ch. Freq. aligned now. Some used units available. THE Classic! Price is $350 & shipping NOS !

ooooooooooo

I realize that I'm only a faceless NEWBIE to you veterans here, but I really need your HELP!

If you can post your opinion, or e-mail me DIRECTLY, I would appreciate it!

Hope you CB experts can lend a "helping hand" to a NEWBIE who wants to get into the fun world of CBs and CBing!

I will be extremely grateful to all those who respond!

The Doppelganger

1928. Re: Ten Tec HF Linear Amplifier revisted

Newsgroup: rec.radio.cb
Date: 2002-02-20 21:30:15 UTC
From: Skipp <skipp@pilotNOSPAMPLEASE.ucdavis.edu>
Message-ID: <a514h7hgf2@woodrow.ucdavis.edu>
Source record: 116090

: Jay in the Mojave <jay123a@qnet.com> wrote:
: There was some discussion a while back on the Ten Tec, HF Amp using a
: 4CX1600 tube. The main consideration was the initial cost as compered to
: having lower quality Linear Amplifiers, constantly break and need
: repair.

I would have had more serious questions like the long term availability of
the 4CX1600 tube. It's getting to be hard to find... only recent news
from a promised limited production run by Svetlana makes it a practical
alternative. It is not a popular tube compared to others...

: In the long run it was cheaper to purchase a quality Linear Amplifier,
: and have it last for years and years, again compared to lower quality
: Linear Amplifiers that require almost constant repair work.

Welcome to the real world.... also works with cars and Women, I'm told.

: 495 out of the Aleutian Islands read the posts, and did purchase a Titan
: II HF Linear Amplifier. Using the Titan for the last few months, Ralph
: said he has never had a lick of trouble with the Titan HF Linear
: Amplifier.
: His old Clipperton sweet tube amp has been barried at sea without
: honors, he said. A 5 week repair turn around at at average cost of 300
: to 400 dollars, TILT!

$300 to $400 ..?
Get a new technician... Dentron Amplifiers are only good as rebuilding
projects. I've never seen a model that had safe a proper circuit from the
factory. Every Dentron I've seen needs a rework which includes updates
and protection to keep from going poof...!

: If you want to play you have to pay, buts that the price of doing
: business.

Not really, you could pick up a copy of the ARRL 2002 Handbook and do it
yourself a lot cheaper. Plus you'd learn something doing it...

: Ralph also added that he has reduced the drive input level, so that the
: Linear Amplifier does right at 1200 watts output, all day and all night.
: Its is very enjoyable to have a reliable clean sounding station. Maybe
: he uses it to keep the beams from icing up?!?!??
: Thanks for the input there Ralph.
: Jay in the Mojave

Smart people limit the drive power and filament voltage so the tube(s)
will last longer.

1929. Re: REQ: Palomar tube-type linear amplifiers info

Newsgroup: rec.radio.cb
Date: 2002-02-20 21:42:12 UTC
From: Skipp <skipp@pilotNOSPAMPLEASE.ucdavis.edu>
Message-ID: <a5157khgf3@woodrow.ucdavis.edu>
Source record: 116091

: JLsoft <jlsoft@atari.org> wrote:
: I'm looking for schematics and/or operating instructions for a Palomar
: "Skipper" 300-watt linear amp and a Palomar 400-watt 10-40 meter
: linear.
: Thanks in advance.

The manual is one page, the circuit diagram is the other. I'll scan it in again as I can't find the last time I did it and send it to anyone who wants a copy free.

Take the NOSPAMPLEASE out of my Email header or use one of the icons off the http://sonic.ucdavis.edu web server.

The early Palomar Skipper was the classic 2 driving 4 tube amplifier which covers the 40-10 meter bands. 6KD6 were the tubes installed in that version, I've worked on a gazilliion of them and have a few myself.

Circuit diagrams are on http://www.cbtricks.com

The skipper 300a was the smaller 3 tube version... one 8950 driving three 8950's in parallel.

Names, model numbers, tubes and face plate front colors changed over the years, but the amplifiers were all similar in operation.

The six tube 6KD6 version (two driving four) can be used with a 4 watt (max drive) radio in the high power position for just over 300 watts carrier output.

The low power position drives the "final" 4 "Quartet" output tubes direct and drive should be limited to about 40-60 watts max for best (most linear) operation. You won't notice an end result signal increase using 100 watts drive vs. the 60 watts I mention... except unless your a VCR taping a program in your neighbors house.

Great Amplifiers... If you can't find the low profile replacement tubes, you just use/make some simple lid stand offs with aluminum and your back in business with the tall tubes in place.

cheers
skipp

That makes it illegal already. A legal US rig should do no more that 4 watts output dead key, or a maximum of 5 watts rms of power input to the final RF amplifier.

> 17.5 ssb watts.

Regs say 12 watts PEP max too here.

>O2A Chip capable of getting every channel from 32 below 1 to 99, not

>Price is $350 & shipping NOS !

If the rig had been modified in ANY way, more power or access to more that the legal 40 US channels etc, it isn't legal to use period.

>I realize that I'm only a faceless NEWBIE to you veterans here, but I
>really need your HELP!

If you give in to the temptation to run out of band or above legal power limits, and I'm sure many on this news group will urge you to do so, will leave you open to FCC fines of typically $7500 per violation at the current going rate. That's assuming you live in the US. They will also tell you the chances of the FCC busting you is low. Well think for a moment whose pocket that money would be better sitting in, yours, or the US treasury department. Are you the kind to bet that kind of money, and can you afford to loose it?

>I will be extremely grateful to all those who respond!

You'll be even more grateful when the local pirate CBer gets busted, and you didn't because you followed the rules.

Have fun.

Hi this radio is about 2 month old.
Like new with box manual mountting braket.
Comes with a new echo power mic the cobra ca79.
I have had this radio tuned up.
this radio has a feq counter built in.
$160 shipped u.s only
I also have a icom 706 hf rig forsale
This radio has the cr-502 crystal installed.
160 thru 10 6 and 2meters 100 memories 100 watts on 160 thru 6meters on ssb
and 30 watts am 10 watts on 2 meters
I have a mirage b23 amp for 2meter also 2 to 5 watts in gets 30to 40 watts
out $550 shipped with out the amp and $575 with the amp.
The icom comes with box manual and mic and powercord and plugs

Sparky, why are you so fixated on the improper use of prepositions? Hey, I just thought of something....why don't you call Jenny Craig, and discuss them with her? Think about it, you could kill two birds with one stone!

hope this is the right place for this. i have a ranger 2950 i would like to sell. it has been converted to pick up citizens band, and tweaked out. works great, just needs a good spit shine and a home where it would be put to good use. im asking $135.00 including shipping. please email me at user96589@yahoo.com if interested.

thanks

There is a 4CX1600 amp in the 2000 Handbook that kind of makes my skin crawl over such things as lifting the cathode above ground and modding the socket to allow it. Curious what you think of it if you can get your hands on it.

The 1600 has 6146 disease, to a lesser extent 8950 disease, in that it despises drawing grid current. You damned well better keep the grid negative or have a pipeline to old Petesville.

Then how can you compare a HT at 1 foot away Randy you are twisting the facts how does that harm the public, unless there is a circle jerk going on. It may harm the ht operator being so close to his cranium, just as the 20 kw will definatly hurt that operator. So are you gonna compare apples for apples and punch in the real numbers.

OK, one more time for you slow learners. At say 135 feet, the exposure falls into compliance. In most cases, if not all, the general public is not going to be that close to the keydown. Now, for the likes of vooby(intentionally uncapitalized for you Sparky), to piss and moan about danger to the school kids is unfounded, as is the danger to the general public.

**** this, go practice your Voodoo!

If you are ever up when a TV station signs on or off you are going to hear, in the case of Channels 7-13 something like maximum aural power of 316,000 watts 'effective radiated power'. Believe me the station is not running 316kw. A 10kw FM transmitter into a 10bay will come pretty close to 100kw erp, the legal limit.

You will also hear the term 'antenna gain' which does not imply that gnomes come out to shine your shoes at nite or that if you follow the incantations you will somehow get the Holy Hand Grenade. You are quite right, no more comes out than goes in.

ERP and gain are always the result of directivity so one unstated thing is direction. Your TV station's antenna gathers up what would be radiated up or down by a simple monopole and squirts it out sideways where it can be useful. And that is the other generally unstated thing, with respect to what?

The rhombic Jim describes is directional as hell and therefore has a fantastic gain in one direction with respect to a simple vertical or dipole. The Sterba Curtains used by shortwave stations tend to be pretty phenomenal as well. See the Voice of America website for the ones at Greenville SC pointed toward Africa. The ultimate gain antenna remains the parabolic dish.

Randy, why do you side step your original post you compared a 20 kw mobile
at 70 feet and a ht at 1 foot. Ill ask you again real slow, how many people
are within 1 foot of the ht? you are using the public as your excuse since
when is the public this close to a HT? Just the operator right, do you
wanna see pics from some of these keydowns these people are right up next to
these flame throwers, go to Big radios .com
follow the keydown links. watch a few movies of the 100 kw mobiles keying up
they are ejecting tapes out of the camera. No these guys don't stand any
where near these things do they?

What does Jenny Craig have to do with the usage of prepositions? That
wasn't much of a thought, Randy. Try again next month.

> Think about it, you could kill two birds with one stone!

Now why would I want to do that? I just photograph birds, I don't kill
them. That wouldn't make a very good photo, now would it?

Yeah I would agree too. The difference between 12 watts PEP and 17.5 watts PEP would hardly get noticed on the "S" meter or the RX audio at another station. Plus I remember, when I was using CBs many years ago, people would spend big bucks having their radio's output "peaked". After the money was spent you still couldn't tell the radio was louder on the air with that extra watt or two thanks to the logarithmic nature of things. If nothing else it screwed up the bandwidth on some of the rigs so they actually put out LESS power at the band edges!

No, psychologists call it "selective blindness". Patients retreat into
a fantasy world where they actually can't see upsetting facts.

Watch.....HEY RANDY, KEYDOWNS ARE ILLEGAL. See? He can't even read
that because it literally disappears from his vision. His brain says
"that's too painful" and blocks it out.

In general, stay away from anything with Cybernet involved with it.
Whether you wanna be legal or not, they make, primarily, junk. Better
than a Cobra 2000? I don't think so! There are better radios than a
Cobra, but this isn't one of them.

If I remember right, a dish needs to be five wavelengths in diameter
in order to realize the gain that a dish can provide. That's 180 feet.

The sense antenna on dishes is a 1/2 wave dipole. And the sense antenna is much smaller than the dish, if you want to get much gain out of it.

I will leave it to you to calculate what size even a 2 wavelength diameter dish would be.

Dick, you are correct .... now if I could just buy up the real estate necessary for a good 160 meter dish .... probably have to rotate the whole county - maybe the state. Well, I may be getting old, but my imagination is just as crazy as when I was 10 - maybe crazier.

Problem is the size. About the lowest frequency you'll see them on (at least for amateur use) is 440 MHz - and these have to be HUGE to generate much gain. It is easier at 440 to develop gain using stacked yagis. Above 1 GHz you'll find dishes. 27 MHz goes into 1 GHz close to 40 times. Not practical, even if you buy up and rotate a whole county.

I used to work on those, under warranty.
They are not all that great a unit in actual fact.
Not bad, but far from the best of the time.
I wouldn't give more that $100.00 for one, if I wanted one.
Far better units out there now.

You can have more ERP than true watts that you put in, but that requires gain. I *kinda* doubt that this guy's figures are truly accurate. But then again, he may have used the same formula that Antenna Specialist used to rate the gain of the original Starduster, which was a quarter wave with downward sloping radials to adjust the impedance.

I am planning to install a whip antenna on my pickup. My question is where would the best place to install it? Behind the cab on the back of the front bed? off the side of the bed? Off the bumper?

Second question:
I ve seen base loaded whips and just plain stainles steele whips. Whats the advantage of a stainles whips that are not loaded? I plan use use both am and ssb on my radio.

Thanks in advance.

Do you think that such grade-school taunting bothers me? It doesn't:
in fact, it reinforces my opinion that people are too superficial and
vain. It also shows your developmental disabilities. Hmm... I also
wonder why people are so obsessed with other people's weight. I'm fine
with my weight. I'm moderately active and I'm certianly not obese. So
why should you be concerned? Sounds like you have a personal problem
that you need to resolve with your therapist, Randy.

BTW, how did you get to the topic of weight when the subject was about
your usage of poor grammar while preaching the same?

Anything shorter than 9ft requires some sort of loading, whether it's
at the base or in the center of the whip. Fiberglass whips are
actually spiral-wound antennas that provide their own loading. But the
rule of thumb is the longer whips are better, and a 9ft whip is best.

Also, the best location is dead center on the roof. A bumper mount is
good as long as the bumper is close to the ground. Everything else is
a trade-off or a matter of personal preference.

Help!!!

I've got a near-new (not hacked) Johnson 223 tube base station. It works great, except for the hum in the speaker at no/low volume. Is there anything I can do about it? I noticed that a lot of these exhibit some kind of hum, yet this one is very noticable.

I had a 102" still whip, tree banging big time problem. Mount it to the
center of the box just behind the cab. Your ground plane will be in a
circular area of your pickup. Much better setup that way. I use to talk to
the wife on the way to work, around 20 miles. With my whip on the box rear
corner it wasn't as good as the center part up to the cab. I could talk
farther to her when driving away from home with the whip in the center of
the box behind the cab. Then when your tired of banging trees,,,,,,,get a
mag mount for the cab. I use the Wilson 500. It works as well and it's not a
tree banger. My wife has a Wilson trunk mount on her car and I was told it
sounded better than my whip. Same Radio's with the same mods. I put the
Wilson 500 on my cab and was told it was better sounding than the whip.

About 10 years ago I got to see Jodrell (?) Bank in person. Just turning that pup must have taken a small locomotive and holding it up in the winds off the Irish Sea would take concrete and steel on a scale like Hoover Dam. It is impressive enough in pix but almost unbelievable up close and personal.

The closest I have ever come was an alcoholic plot to load the St. Louis Arch on 75.

I don't know if it is the one you have in mind but they had one parabolic array of some stupid number of towers (60??) with a feed antenna on tracks and hydraulic lifts that was used and if nothing else established that there is a point where the power you are putting to a small point of the ionosphere does indeed have a limit. Exceed it and you vaporize Dr. Heaviside's magic layer and go nowhere. Somewhere about 5.5 megawatts ERP as I recall.

No one beats the Russians for bludgeoning a problem to death.

--Tom

Without having much of a clue about this Johnson the most usual cause for this kind of problem is a drying filter capacitor in the power supply thru sheer age -- which probably explains why every old one you ever hear has the problem.

Odds are it is a three-section can type no longer available but bridging it with tubulars is not a big deal to any old yo-yo who ever worked on hollow-state thingees. It is not a job for Red the Tech down at Happy Larry's Truck Stop, Funeral Home, and Emporium of CB Delights; find a retired TV man.

Do the world a favor and don't post in HTML, some can't get it and it is kind of flakey to reply to.

First thing to check are the filter capacitors. These little wax-covered paper tubes often get leaky and stop functioning with age. I'd say to re-cap the whole unit, replacing with comparable values of newer, far more reliable caps. What's happening (if it is caps, which usually causes humming in tube gear) is that a capacitor that normally removes rippling waves from the power source is not doing its job, and therefore the rippling is getting into the audio circuitry.
Be sure to use capacitors that have the same capacitance value, and at least the same if not greater voltage values as the ones you replace.
Hope this helps. I'm sure others may have other suggestions.
Linus

Not really because I have never run my life as a popularity contest. But I did just finish carting grade school and jr. hi kids for about 5 hours this afternoon and it might be nice to hear an adult-sounding voice after the experience. Do I detect a bad case of Peter Pan Syndrome???

2028. Blind Observations

Newsgroup: rec.radio.cb
Date: 2002-02-22 03:36:34 UTC
From: arcweb@bnnorth.net
Message-ID: <3c75bc99.3641239@news.bright.net>
Source record: 116492

Once upon a time, in a nice little forest, there lived an blind little bunny and an blind little snake.

One day, the bunny was hopping through the forest, and the snake was slithering through the forest, when the bunny tripped over the snake and fell down. This, of course, knocked the snake about quite a bit.

"Oh, my," said the bunny, "I'm terribly sorry. I didn't mean to hurt you. I've been blind since birth, so, I can't see where I'm going. In fact, I don't even know what I am."

"It's quite okay," replied the snake. "Actually, my story is much the same as yours. I, too, have been blind since birth. Tell you what, maybe I could kinda slither over you, and figure out what you are, so at least you'll have that going for you."

"Oh, that would be wonderful," replied the bunny.
So the snake slithered all over the bunny, and said, "Well, you're covered with soft fur; you have really long ears; your nose twitches; and you have a soft cottony tail. I'd say that you must be a bunny."

"Oh, thank you! Thank you," cried the bunny in obvious excitement.

The bunny suggested to the snake, "Maybe I could feel you with my paw, and help you the same way you've helped me."

So the bunny felt the snake all over, and remarked, "Well, you're scaly and smooth, and you have a forked tongue, no backbone and no balls. I'd say you must be either a politician, an attorney, or possibly someone in upper management."

Message-ID: <3C75C099.7F3D3760@vdoefx.com>
Source record: 116491

Thanks very much Dick for the quick response. Allow me some comments.

o Please don't be offended by the 'html' post??? I use
Netscape 4.79 exclusively, and have the formatting set to text. Or, at
least it is in the email section; would assume same in newgroup
posting? Please reforward my original posting back to me so that I can
see why this is. I would never ever purposely post in html. I'm an old
unix fellow, who thrives on the KISS method.

o The johnson radio is old, circa 1970's I'd guess. The hum is
very noticable, and is essentially AC I'd imagine. The power plug,
still factory wrapped by the way, is only two prong. No ground. I did
connect the radio's case to the ground side, but hum still there.

o I don't (yet) have a schematic, so I can't really tell what's
what (I'm a retired Navy Electronics Technician - been there, done that
etc). However, there is a two section can style filter cap for the B+
high (tx) and low (rx). I'd assume that these were simply not available
in RS :), so guess I'll have to start looking elsewhere. I would also
assume that the old jumpering of the cap test would also prove/disprove
the filter cap going bad (connect a similar cap in parallel, provided
voltage rating is at least equal to the factory unit).

Source record: 116494

http://page.auctions.shopping.yahoo.com/auction/61618822

This auction is for a Cobra 142 40 channel base CB radio. Included in the auction is a D-104 amplified desk microphone. This radio shows some age, but works excellent. It was recently put through alignment procedures at my local CB shop, which has been in business for 15+ years. The audio limiter was replaced, as the previous owner cut it. It now puts out approximately 12 watts AM and 20 watts SSB. Also included are "extra channels", extending the range above and below the normal CB band. The clairifier has been opened to allow you to slide about 5 kc's in either direction, giving you more coverage. The radio features a built in SWR/Power meter. The SWR CAL dial has been modified to act as a "dial-a-watt", allowing you to adjust the output power from almost 0 to the maximum stated above, great if you want to drive an amp.

Bayou Biscuit,
Of the three choices you gave, off the side of the
bed would probably be best. The idea is to get the
antenna as far from any part of the truck as you can.
On top of the roof would be ideal, but raises all
kinds of other problems.
The advantage to the 'loaded' antennas is that they
are shorter than 9 feet. Makes it much easier to find
an acceptable place to mount them, not hitting every
tree you go by, etc. The disadvantage is that they aren't
quite as 'good' as the steel whip (lots of argument
about that though). It really doesn't make any difference
what mode you use (AM/SSB), you pick an antenna for the
band or frequency your going to use.
Good luck...
'Doc

I run a 96" Francis mounted on a bracket centered behind cab. With the bracket it is about 11" away from cab at top of bed. (A little in the way if I want to put something such as an ATV in the back, but) My truck is fairly tall to begin with, top of bed is about 60" from ground,.

I have adjusted my driving style to avoid trees, telephone lines, ect... Although people do look at you funny for swerving into the other lane for what appears to them as no reason. LOL I took my antenna and coated the top 6' or so with about a 1/6" of two part epoxy (clear). It has taken some pretty hard blows and it is still holding up. I did split the first one on the second day. This one has been on almost six months now.

I am willing to bet that these regulations were in effect when you purchased you land. I don't see how they couldn't have. Going on that last assumption. MOVE fool. If you don't like it don't buy the land. That is not hard to figure out. I live in one of the regulated places and as bad as I would love to put up an antenna I am glad I can't. Because this is a nice place, now most radio operators would be OK, but there is always going to be those one or two that are going to put up a junky nasty old ugly one that the either poorly made or found in the local junk yard. Then when I get ready to sell I won't be able to because Billy Bob next door has a antenna made out of coat hangers that sits on five Ford nine inch rear ends welded together for a pole.

Again, I would love to have one myself, but once I can't take it anymore I will move where there are not regulations.

do you have any idea just how big it would have to be to exhibit the
standard 20DB gain found in most microwave systems?

I'd do the math, but I can tell you, it isn't worth the next hours work
on multiple lines of equations to design the dish and matching network
(and you'd need about 100 acres of land to put the thing on)

Although we dont have keydowns in the UK, I have been reading the threads and watching the movies on bigradios.com about the RF produced with some interest. Then I got to thinking, say someone got hurt as a result, and the lawyers got involved, who would be held responsible. In other words who would sue whom?

Seems to me it could be a pretty expensive exercise finding out, especially in the USA.

Cheers

Most of our lawyers work on contingency, a practice for which attorneys are jailed in most of the English-speaking world. As a result, until 'who is responsible' can be answered and determined to be solvent and then some, no counselor will even get interested.

What you are trying to change is just one small aspect of the general problem of CC&R's, home owner associations, city ordinances etc. that try to control what people do with their own property. The ARRL has been pressuring the FCC, and congress, for some time to add to the language in PRB-1 that would exempt Amateurs, and allow them to erect antennas structures that are within reason to facilitate their communication needs. You should be able to find out what the ARRL is doing on the legal front lines so to speak on this issue. I would also suspect that CBers would likely profit from anything done to improve the situation for Hams as well.

2055. "Peak & Tune" or TUNING UP CB's DOES made a Difference!

Newsgroup: rec.radio.cb
Date: 2002-02-22 15:08:19 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3c7661dc@news.planetc.com>
Source record: 116367

The problem is that you went to an Incompetant tuner uper of CB's that made no or not much difference when he tuned it up. For US that do a good job doing this "Peaking & Tuning" of CB's, it DOES made a BIG difference! BIG meaning 40% louder modulation (without mod. kits) and more dead key watts. The problem is that the man asked for EXPERT opinions, not Hambo Theory Thinkeries! When an AM CB is tuned up right, lets say another 1-2 watts more AM dead key, with the 40% increase in Modulation, the other CB that receives THIS signal is up about 2-3 "S" units on the meter. WHY is this, MR. Theory man? Theory says it is not so. For US good CB shops that do it on a daily basis, our customers KNOW and see and WE HAVE SEEN with our own eyes that much of an increase on our S meters when the job was done right. SO IN the REAL world of Watts & Modulation, there IS a difference when a CB is "peaked out or Tuned Up." So next time someone asks for Expert Help, you need not spout what your Theory books say from Hambo land. You're on da wrong newsgroup for that. Leave the real world information to US that KNOW what is going on! AND there is no problem on the Band edge when it is done right, either! WE KNOW Better!!!!!!!!!!!!!!
Dave!!!!!!!!!!!!!!

This is a very neat looking radio and a bit on the Rare side. I am looking for the best offer over $250.00 It is a STONER PR-10 transceiver that works on 11 meters . I was amazed how sensitive this radio was. The stations just boomed in. It has been checked out on both receive and transmit and is fully operational. AM-USB-LSB multi speed scan, RIT control and a neat looking digital display. I don't have any DC power cord or operating instructions for this radio. The wood case is in good condition. Each side has a small screw hole from a mobile mount. The up-down microphone works great! I would rate this radio an 8 on a scale of 1-10. Please look at the pictures below. Questions can be sent to roblonn@cox.net.

Mailing list for Personal communications:
http://www.smartgroups.com/groups/frscomm

This list allows discussion of ALL radio services available to the general public, with the exception of amateur radio.

49 Mhz
FRS
GMRS
MURS
CB

Only discussion of legal operation of these services are permitted.

The goal is to talk about radio and have fun! Off topic banter is also allowed for the most part.

Usenet is a place to share ideas, but there is too much flaming and spam at times to allow for friendly conversation.

Smartgroups functions in a similar manner to Yahoo groups, but with more reliable service and support. Also, there is "writing on the wall" that Yahoo may begin to charge for access to the lists.

All are welcome..... Enjoy!

>
> --Tom

Tom,

Try replacing the 6AW8A tube used in the squelch circuit.

This used to be a common problem with those radios when anything other than an RCA 6AW8 tube was used there.

Warranty shops would often have to 'select' 6AW8A tubes if someone wanted to minimize or completely eliminate the hum.

The squelch circuit is after the volume control so when you turn the volume down you do not affect any of the very low level hum being introduced by the squelch circuit.

I would try the tube swap first because the tube is socketed and is easy to change, but if that fails, you may have to replace the power supply filter cap(s) as the other poster had sugested.

Dennis O.

2063. Are the Cobra 75WXST and the Midland 75-822 the same radio?

Newsgroup: rec.radio.cb
Date: 2002-02-22 16:16:31 UTC
From: noahkaatz@yahoo.com
Message-ID: <87220c3c.0202220816.1a4eadef@posting.google.com>
Source record: 116375

I have the Cobra 75WXST and Midland 75-822 radios and are wondering if they're the same units. They both are made in the Phillipines, both have the same five notes (i.e., startup tones) when fired up, and both have poor squelch capabilities (cutting out conversations frequently).

Does anyone know about these radios? Any better handhelds out there have better squelch than these two units (Uniden's Pro 350XL?).

I don't know the reasons why maybe someone will jump in.

I was surprised I was being told my radio sounded better using the Wilson
Mag mount. I took my radio from my pickup and put in the wife's car thinking
no way could the Wilson 1000 truck mount work better than my 102" whip.
Nope,,,,the radio wasn't the problem. I was told my radio sounded just like
it was her's. Beats me?? My swr's were just fine on my whip too.

Personally, I prefer a 102" stainless steel whip antenna. That with 20' of coax will give you a SWR of 1.1 to 1...
As far as mounting, right behind the cab gives you the best range pattern.. If you mount it on a bumper, then the opposite corner will be your strongest point. For example, I mounted my whip on the back right side, and my strongest signal was off of the front left side (at a distance of 20 miles). I had a dead spot when I was facing sideways to the person receiving me (in my case she was to my West, so when I was facing North or South). When I put the mount right behind my cab, I lost the dead spot, and had the same signal strength for any direction (at 20 miles).
pat.

Although I can't cure the "tree banging" problem, I would offer the most obvious suggestion for you to lessen it.. Place a tennis ball on the antenna right about where it will hit between the top of your window and the top of the cab.. At least that way, it won't beat your cab to death when you hit the trees.. Or, when you are NOT using it, hook it to the bed of your truck.. Radio Shack has a little hook that actually keeps it from touching the bed, so if worse comes to worse, you can still transmit with it down.

The keyclowns won't sue each other as they treat all injuries received
at a keydown as proof they had fun. Even the guys who got big tumors
in their brains after hanging around ridiculous amounts of RF (and
died) didn't consider sueing their fellow keyclowns.

Only way lawyers could get involved is if the keyclowns harmed a
member of normal society. Like, say, a bunch of SCHOOLKIDS at a PARK
that happened to be playing 138 FEET away at a PLAYGROUND during a
KEYDOWN. Some broadcast engineer would probably be called to the
stand to testify about harmful levels of ERP the kids were exposed to.

Ok, after reading all of the posts in here, I've come to the following observations, and conclusions.. Please correct me if I'm wrong...
1) Currently, the law states that the only antenna that can be placed on a roof is a TV antenna, and that hooking anything other than a TV (Eg. Stereo, Scanner, Ham Radio, SW Radio) to it is illegal.
2) You want to petition to correct that for what means? By this I mean, do you want to be able to mount a CB antenna to your roof, or do you mean that you want to be able to hook your "receiver" (please note I DID NOT say "transceiver") to the antenna?
IF your petition is for hooking up a receiver only then I am 150% behind you.. But, if it will allow anyone to put up any kind of antenna (or hook anything they want to the existing antenna), then I would ask for some restrictions. One case noted was the gentleman who said it would be hard to sell his house if "Billy Bob next door has a clothes-hanger mounted on old Ford tires" sitting out front. I wouldn't be as concerned for the way his antenna looks (Being an operator, not trying to sell my house), as I would for what kind of transmission problems he's creating...
If a person is going to do everything in their power to prevent their transmissions from affecting their neighbors TV's, radios, or cordless telephones for example, I am behind them 150% also.. They should be allowed to put up an antenna for the enjoyment of their hobby. Mind you, I realize that you can't totally prevent this interference, but if you are at least TRYING, then your neighbors are more likely to WORK WITH YOU..
pat.

2073. Re: Johnson 223 Hum? Please HELP!

Newsgroup: rec.radio.cb
Date: 2002-02-22 18:19:24 UTC
From: Tom Jenkins <tjenkins@vdoefx.com>
Message-ID: <3C768BAC.5F5D309C@vdoefx.com>
Source record: 116385

Thanks MUCH for the info. I'll obtain some tubes and see what happens.
I did think about replacing some capacitors, but am not there yet.

By the way, I was looking at the schematic last night - seems that when
I shorted the grid (pin 7) of the first audio amp (V7A), the hum would
go away. Yet, when I shorted the volume control, the hum was still
there. It does appear that the problem is around the first audio amp,
but can't determine yet why.

Also, when I gound pin 7 of V5A (squelch), there is no hum either.

Why would the follow-on squelch tube introduce hum?

I can confirm that the V5A/B is an original 6AW8A tube, RCA manufactured
for E.F. Johnson, dated 1973.

I'm T/S'ing with a simple meter - all my other test equipment is in
storage :)

Bumper mounts do have that drawback. Once you learn the radiation
pattern, though, it can be an advantage. I have my mount on the center
of the roof, and usually holds a short center-loaded rat shack wire,
while the 9ft whip stays in the back for special occasions. I have
another advantage with the roof mount -- I have an L-pad inside the
cab right under the mount and I can peak it at any time.

My question is if FM BC reception from a VHF/UHF/FM antenna is
specifically banned, or if it is just assumed to be illegal because
the rules do not specifically state that such an antenna -can- be used
for FM reception. In other words, "you can't use a TV antenna for FM
reception" as opposed to "you can only have a TV antenna". Got a link
to these rules? Maybe a quote?

BIG
> > meaning 40% louder modulation (without mod. kits)

Of course it may no longer be "intelligible" either, but what the heck
right?

> and more dead key watts.

You can send CW by watching the "S" meter swing I guess. Without more audio
power to modulate the typical class C output stage, in an AM rig, the extra
carrier power doesn't do a thing except thrill the "S" meter junkies.

> > The problem is that the man asked for EXPERT opinions,

The "honest" experts will tell the lucky CBer that peaking isn't really
worth the money.

> not Hambo Theory
> > Thinkeries! When an AM CB is tuned up right, lets say another 1-2 watts
> > more AM dead key, with the 40% increase in Modulation, the other CB that
> > receives THIS signal is up about 2-3 "S" units on the meter.

Hummm... one "S" unit is typically assumed to be 6db, in practice that looks
more like 3 to 6 db. A 3 db increase in power is a factor of 2
(3db=10*log(2)). A stock CB has 4 watts of output power, legal max, or 5
watts of INPUT DC power. So the extra 2 whopping watts will net you
10*log((4+2)/4)=1.76db. So at best, 3db per "S" unit, you gain a little more
than a whopping 1/2 "S" unit. That's nothing to brag about. The luckless
CBer would have better spent his money buying a good antenna with a real 3db
of gain or more.

> WHY is this,
> > MR. Theory man?

If some dummy wants to spend his cash like that there will be somebody out
there willing to take it. Fools and their money soon part ways.

>Theory says it is not so.

Ah... theory does say so. Or you can say it's just a big commie plot to take money away from dumb CBers who believe peaking their radios does any real measurable good. 8-))

I wonder if the commies on this NG would like me to preach on the DANGERS of practicing communism?! I'm sure it would be an eye-opener! You in the UK: here is something that you don't know. The "shootout" people are mainly from African ancestry, and because of their darker skin, RF would tend to hurt them less? ! And since the HATE for lawyers is so great, because of them we can't have metal GP antennas made here anymore, so those in the "shootout" contests would be less inclined to hire those who Jesus said WOE to!

Dave,
That IC is a uPD 2824 it can be replaced with a uPD 2816. Try RFparts.com or
Radio Shack. 1-800-843-7422 (NP Part # 4694).
This is very common in used/junk CB's. I might even have one around somplace.

Tim

I Thank All for the information. I have spoke with LC in Stevensville
Mich. many times. And know of his web site. He is high priced and does
not have all the original type replacement parts for trams D201 and
A's. I collect them and have been for many years. My collection may
not be as big as others but I'm still trying. I'm in the process of
rebuilding one now with all of the tubes in a separate box. with
cooling fans. A complete redesign. I needed to know of troubles I
might encounter creating more wire distance between some components.

I am aware of shielding parameters. Again Thanks for the Info to all.

I had the tennis ball. I've had a few different antena's and so far the best
I've used is the mag mount on the center of my cab, and I prefer the Wilson
500. Friends tested the Wilson over the K40 and the Wilson preformed better.
This guy testing was a dealer for both company's. He droped K40 after.

>1) Currently, the law states that the only antenna that can be placed on a
>roof is a TV antenna, and that hooking anything other than a TV (Eg. Stereo,
>Scanner, Ham Radio, SW Radio) to it is illegal.

Incorrect. The law Keith is referring to only states that consumers have the right to preempt or otherwise prohibit previous CC&R restrictions on TV antennas. It says nothing about the legality of receivers, or even other antennas, *per se*.
It only says that the use of a TV-receiving antenna/dish cannot be restricted anymore.
The quote used, about SW, scanners and other radios being 'not covered' by this rule is misleading.

Another thing to consider, and I have seen plenty of "legit cb shops"
do this, is when doing a "peak and tweak", is the "whistle test" on
the modulation/power meter. trying to get that extra forward swing
ect. Well sure a whistle is louder, but how many people speak while
whistling? Why don't these shops show you what the net gain in power
and "swing" is under a normal operating voice level?

Viola.... new squelch tube didn't work, but first audio (V7, 12AT7)
replacement worked like a champ!!!

No/full volume - no hum. Thanks for the pointers all!

This makes my weekend :)

Seems somewhat unfair, if someone is injured by RF, and the guy that
organiszed the event, and the guy that keys the mike that produces the
RF both say they are broke, the poor victim will get sweet f*ck all!

Mind you the laws pretty much the same here, unless neglect can be
proven, then *I think* it can become a criminal matter. Thats a whole
new ball game :-)

Cheers

Score for you both. The Gregorian is earlier (15xx) but being the work of a Catholic Pope, it was not adopted in Protestant nations until later, about 1730 in Britain where the Hanovarian king, the issue having had to be worked out in Germany, thought it was stupid to continue on the Julian. The October Revolution in Russia took place in November for the same reason; they did not shift until the 1920's. Orthodox Christmas is now 13 days later than Western Christmas but most civil governments run on Gregorian. Easter (Ishtar??) is lunar and the only diff is that the Orthodox require Easter to follow Passover.

The diff is in the Leap Year formulas where the Gregorian requires years ending in 00 to divide by 400 so a day was gained in 1800 and 1900 and another will be gained in 2100. Gregs formula is so close that a day will not need to be deleted for nearly 10,000 years. Greg did not quite take all the slop out so that Christmas which was designed to celebrate the return of the Sun now follows the solstice by 4-5 days.

So now we will continue the exam:

1) The seven-day week has been essentially unchanged since early Mesopotamians defined it to honor seven gods, whose names incidentally have also gone essentially unchanged in over six millenia although the languages they come from differ. Sun, Moon, etc and Thursday is the thunder god. The 'day of rest' also originated there, not because of religious reasons but because one of the gods was a flake and nothing done that day would work anyway. So it was appropriated to be Shabat. What in hell is the attraction of the seven-day week???

2) Gregs calendar fix was a good one that made sense unless one likes Christmas in Lent among other stupidities. Given the composition of the US Congress;

a) how many would understand that there was a problem?
b) How many would know what the problem was?
c) How many would try to blame the opposite party?
d) Other than the sure bet Billy Tauzin, how many would try to figure out how to get a campaign contribution.
e) What is your estimate of the probability of getting it fixed?

Give yourself a bit of credit for what is really pretty logical blundering around. The 12AT7 would not have been my first choice for no better reason than they rarely shorted or became microphonic but you seem to have found one that did. 12AX7s were another story entirely.

You win this week's Pretty Pink Painted Pisspot!

2107. FS: Galaxy Saturn Base

Newsgroup: rec.radio.cb
Date: 2002-02-23 02:40:14 UTC
From: Matt <mudpup@newnorth.net>
Message-ID: <3C77010E.B41D253@newnorth.net>
Source record: 116418

I am selling a Galaxy Saturn base. It is in good shape 8+ out of 10. The face has 2 scratches on it one light scratch by the handle on the left side about 1" long and another scratch about 1/4" long by the upper left speaker holes. Some of the writing around the switch labels has also worn a bit. The mods that I know have been done to it are red and green meter lights, a switch on the frequency counter- the switch is located in the "frequency counter" jack spot on the back of the radio, and it has been tweeked and peaked. The only thing wrong with this radio is that when you turn the echo on and turn the tone control past "0" it starts to have a high pitched whine with the audio. I don't have an owners manual for it and I don't have a mic since I always just used a d-104 on it. Make an offer......

I have to get me one of these websites. You know self-incrimination is the number one reason criminals get caught!!!!

BTW I live about 10 miles from L.M. What do you call yourself on the radio? I am guessing you have one since you post your diluted opinions here on rec.radio.cb often. What freq. you run? Maybe I can voice my opinions to you on the air.

This sounds like Congress has passed a law that very narrowly overrides
CC&R restrictions. In other words, they were not willing to create a
general override - but did so for television. I am surprised they did
not do so for FM. Maybe they assumed that, since the FM band is in
the VHF TV band, that both would be covered.

The seven days approximately match the lunar quarter cycle. So four
weeks is approximately one lunar month - which actually averages about
28.5 days.

2130. raisins

Newsgroup: rec.radio.cb
Date: 2002-02-23 15:29:09 UTC
From: arcweb@bnnorth.net
Message-ID: <3c77b41f.6585873@news.bright.net>
Source record: 116442

A general store owner hires a young female clerk who likes to
wear hot skirts and thong panties.

One day a young man enters the store, glances at the clerk and glances
at the loaves of bread behind the counter. Noticing the length of her
skirt [or general lack thereof) and the location of the raisin bread,
he has a brilliant idea. "I'd like some raisin bread please", the
man says politely.

The female clerk nods and climbs up a ladder to
reach the raisin bread, which is located on the very top shelf.

The young man standing almost directly beneath her is provided with an
excellent view, just as he surmised he would be.

Once she descends the ladder he muses that he really should
get two loaves as he's having company for dinner. As the clerk
retrieves the second loaf of bread, one of the other male customers
notices what's going on.

Thinking quickly, he requests his own loaf of raisin bread so he can
continue to enjoy the view.

With each trip up the ladder the young lady seems to catch the eye
of another male customer. Pretty soon each male patron is asking for
raisin bread, just to see the clerk climb up and down.

After many trips she's tired, irritated and thinking that she is
really going to have to try this bread for herself!!!

Finally, once again atop the ladder, she stops and fumes,
glaring at the men standing below.

She notices an elderly man standing amongst the crowd staring up
at her. Thinking to save herself a trip, she yells at the elderly
man, "Is yours raisin too?"

"No," croaks the old man...."But it's startin' to twitch."

An elderly retired sailor puts on his old uniform and heads for the docks one more time. He engages a prostitute and takes her up to a room.

He's soon going at it as well as he can for a guy his age, but needing some reassurance, he asks, "How am I doing?"

The prostitute replies, "Well old sailor, you're doing about three knots."

"Three knots?" he asked, "What the hell does that mean?"

She says, "You're knot hard, you're knot in, and you're knot getting your money back."

Source record: 116444

There were twin sisters just turning one hundred years old in St. Luke's Nursing Home and the editor of the Cambridge rag, "The Cambridge Distorter," told a photographer to get over there and take the pictures of these 100 year old twin biddies.

One of the twins was hard of hearing and the other could hear quite well. The photographer asked them to sit on the sofa and the deaf one said to her twin, "WHAT DID HE SAY?"

He said, "WE GOTTA SIT OVER THERE ON THE SOFA!", said the other.

"Now get a little closer together," said the cameraman.

Again, "WHAT DID HE SAY?"

"HE SAYS SQUEEZE TOGETHER A LITTLE" - So they wiggled up close to each

other.

"Just hold on for a bit longer, I've got to focus a little," said the photographer.

AND AGAIN - "WHAT DID HE SAY?"

"HE SAYS HE'S GONNA FOCUS!"

With a big grin, the deaf twin shouted out, "OH MY GOD - BOTH OF US?"

Bert,

Na-na-NA-na, boo boo, my daughter is 15. Been thru about all the stuff described. Still, the
toils of parenthood don't stop--they just take a different form. Right now, I am about the dumbest, nerdy-est, uncool person there is (the gospel according to teenagers)! She once in-
formed me that I knew nothing about sex! WHAT!? Her logic was that parents are so stupid, so out-of-it, we CAN'T know anything! LMAO! Of course, my return question to her was,
"DUH! How ya think YOU arrived on the scene?" Ah, just a case of speaking before thinking.
She conceded that, well, maybe you know "a little". In spite of our wide age gap (I'm 54), we
are the best of friends, and are a real "pair" when we get together. She comes up to visit, or I
drive down to see her, and we stay on the go; shopping (her favorite, naturally). movies, skating, looking at cars (she thinks old Dad's gonna fork over the dough for a new'un next year), and just running around. I think she tries to see if she can wear the "old man" out. Hey,
I actually had her begging to go home one Saturday! LOL! She was "give out" as we south-erners say, and I said, "That'll learn ya, durn ya!"

Congratulations!

I hope you enjoy the hobby, meet new friends, and find the DX to be great
after the solar cycle
dies down on the lower frequencies. Yeah, yeah, I know, you'll find some of
those curmud-geons the fellas in here use to put down the entire Amateur
community, but they will be few and
far between. Ninety per cent of the hams you will run into will be nice to
you and welcome you
to the bands. Hey, I like the suffix of your call--TCQ-- CQ, CQ CQ, CQ, de
KC8TCQ, K.

Kind of makes you wonder a few things.. ya know?
How long has he been waiting for this radio? Did you e-mail him back to get a correction on the address right away? Did you try, and it got sent back to you? If so, did you e-mail him right after that, and tell him this? IF the answers are "longer than 3-5 weeks", "No, I didn't", "No, It didn't get sent back", and "No, I didn't"--I think YOU owe the apology ma'am.. And personally, I think that you should have e-mailed your reply to him, instead of making yourself look like a fool on a Publc board....

No I'm not. But seriously, can't you picture it?

PROSECUTING ATTORNEY: Your honor I'd like to call an expert witness.

BROADCAST ENGINEER: Yes, my calculations show that the keyclowns at
Tracey Field were operating well in excess of the minimum safety
levels for the ERP exposure.

DEFENSE ATTORNEY: I object! How were these measurements made? Are
these "bird watts"?

BROADCAST ENGINEER: There's no such thing as bird watts.

TOLL FREE: (FROM THE GALLERY) Yes there is!! Yes there is!!!

JUDGE: (POUNDS GAVEL) Sit down or you'll be ejected from the courtroom!

Source record: 116310

This is a very neat looking radio and a bit on the Rare side. I am looking for the best offer over $200.00 It is a STONER PR-10 transceiver that works on 10 meters. I was amazed how sensitive this radio was. The stations just boomed in. It has been checked out on both receive and transmit and is fully operational. AM-USB-LSB multi speed scan, RIT control and a neat looking digital display. I don't have any DC power cord or operating instructions for this radio. The wood case is in good condition. Each side has a small screw hole from a mobile mount. The up-down microphone works great! I would rate this radio an 8 on a scale of 1-10. Please look at the pictures below. Questions can be sent to roblonn@cox.net.

i dont know who this dumb ass is...but "la raza" simply means "the race"
meaning the mexican race of people. it is also the name of a political
organisation comprised of mexican nationals and mexican americans,dedicated
to the imposition of their particular political views.some of these views
are not necessarily in step with the best interests of america.

Yeah, I guess you're right. I wonder if he'd feel better if I said I didn't get $500.00? I sold it for $450.00 without the VFO. I sold all my Mark III's and Mark IV's for $400.00 and up. I don't see his problem unless he has 1 and can't get anything for it! Maybe it's not as nice as mine, I dunno. If you have "good" stuff and keep it in "good" condition, there is no reason why you shouldn't get good compensation for it. Oh well, on to bigger and better radio deals!

2155. Re: 11m parabolic dish

Newsgroup: rec.radio.cb
Date: 2002-02-24 00:50:19 UTC
From: technomage <proudhawk@uswestmail.net>
Message-ID: <fNWd8.3033$2v6.273542@news1.west.cox.net>
Source record: 116317

how big?

I spent enough time running through antenna analysis to know that 2.5
wavelengths is not even close to sufficient for more than 10 db of gain.
I'd have to break out my text on antenna engineering to be sure, but for
11 meters, the dish would have to be a minimum of 90 feet radius to
exhibit any appreciable gain on the upper HF bands. to make a dish that
parge is going to require multiple tones of etal, a support structure
that will allow for ground clearance (120 feet tall minumim) and a 5000
pound counterweight on the end of a 20 foot boom stuck out the back side
of the dish.

believe me, it ain't worth the approximately $70,000 in materials and man
hours to build, let alone the utilities expenditures when you go to turn
it. also, a structure that big will require FAA approval and I also doubt
the fcc would allow a cb'er the variance needed to allow its operation.

hell, a joe gunn beam works far better and costs substantially less.

The Dish antenna will start to collimate the energy at about 10
wavelengths.

A dish can also work very well, with a off set feed, not illuminated the
vertex, with just a little amount of loss in gain.

Large Dish Antennas could probably be feed with a mobie near it, acting
as a offset feed.

Breaker breaker, dude!

Source record: 116319

gotta say, the guy just below is right.
Look in any radio book that is on the subject.

live long and prosper!!

Hummm... one "S" unit is typically assumed to be 6db, in practice that looks more like 3 to 6 db. A 3 db increase in power is a factor of 2 (3db=10*log(2)). A stock CB has 4 watts of output power, legal max, or 5 watts of INPUT DC power. So the extra 2 whopping watts will net you 10*log((4+2)/4)=1.76db. So at best, 3db per "S" unit, you gain a little more than a whopping 1/2 "S" unit. That's nothing to brag about. The luckless CBer would have better spent his money buying a good antenna with a real 3db of gain or more. And put it up high as you can with GOOD coax!!!

She's the typical housing commision, dole bludging, single mother menopausal
old woman that gets on the CB because she thinks it makes her sound more
intelligent somehow. As if talking down to truckies makes you look
intelligent? I'll never understand these people. Reminds me of the Primus(?)
ad where the slogan is "you can have a really cheap conversation".

Granted that if it made any real difference but most lunar calendars do not try to match moon phases more than once a year, like Tet and Ramadan but just set up an arbitrary 28 day 'moonth' and let it flow. Twelve mooths is 336 days and 13 comes to 364 so a fudge factor of some kind is required now and again. One may plant crops by the moon but that is about its only real function.

In later times the moon, with the single exception of Easter, fell out of general use in the Western World with the solar calendar (and Mithra the Sun God) taking prominence. Various other weeks have been tried and pretty summarily ignored including the French who in keeping with decimalizing everything tried ten day weeks and ten-hour days and the Russians where Lenin rather wisely flushed the whole shebang aborning. Wouldst this had happened to the metric system; that it did not simply shows you can run a system with no people-sized units at all. Viva la France, belch.

It is of interest because it is virtually unchanged since Sumer complete with the days of the week. So I still wonder what makes it so bullet-proof.

Just ignore the ignorant webtv hater. I ran "real" computers from 1980 until last year. This pea-shooter webtv is way less hassle & more reliable than any computer that I ever owned, including my Macs. To use a "real" computer for newsgroups, e-mail and surfing the 'net is a waste of a good computer.
The only thing I can't do with this is packet stuff & I have a cheap Toshiba laptop for that.

I think there is something wrong with it. It barely works when a CB is keyed up on it (2 amps) and is a long grey one, so I figured that it is at least a 5 amp soop - ply ! I will mess with it when I git time.
Dave

Subject: Wanted For Attempted Murder

WANTED FOR ATTEMPTED MURDER (The actual AP headline)
Linda Burnett, 23, was visiting her inlaws, and while there went to a nearby supermarket to pick up some groceries. Several people noticed her sitting in her car with the windows rolled up and with her eyes closed, with both hands behind the back of her head.

One customer who had been at the store for a while became concerned and walked over to the car. He noticed that Linda's eyes were now open, and she looked very strange. He asked her if she was okay, and Linda replied that she'd been shot in the back of the head, and had been holding her brains in for over an hour.

The man called the paramedics, who broke into the car because the doors were locked and Linda refused to remove her hands from her head. When they finally got in, they found that Linda had a wad of bread dough on the back of her head.

A Pillsbury biscuit canister had exploded from the heat, making a loud noise that sounded like a gunshot, and the wad of dough hit her in the back of her head. When she reached back to find out what it was, she felt the dough and thought it was her brains. She initially passed out, but quickly recovered and tried to hold her brains in for over an hour until someone noticed and came to her aid.

And, yes, Linda is a blonde.

One day God was looking down at Earth and saw all of the rascally behavior that was going on. He decided to send an angel down to Earth to check it out. So he called one of His angels and sent the angel to Earth for a period of time.

When she returned, she told God, "Yes, it is bad on Earth,95%are misbehaving and 5% are not.

He thought for a moment and said, "Maybe I had better send down a second angel to get another opinion."

So God called another angel and sent her to Earth for a time too.

When the angel returned she went to God and said, "Yes, the Earth is in decline, 95% are misbehaving and 5% are being good."

God was not pleased. So He decided to E-Mail the 5% that were good because He wanted to encourage them..... give them a little something to help them keep going.

Do you know what that E-mail said.......?

*

*

You didn't get one either, huh?

N8 and all you dweebo Hamboz CB bashers, PLEASE go to another message--I Ain't talking to you!

(All others scroll down for da scoop)!

Now that we got rid of da commie crybabies, I wanted to tell ALL what will probably work better than getting a LINIKER ! ALL you got to do is:

Get the LONGEST antenna you can find, one with the coil on it as high as possible (or a 108" whip with NO coil). Make sure the antenna system is PROBLEM FREE, and that the SWR is set PERFECT. I have been stopping sales of linears to customers because MOST CB'ers don't KNOW what they want, equipment wise. Maybe N8 can sign us up on a govt. program to give us $$$ for da linikers we ain't sellin' any more! CB'ers just want the RESULTS of MORE RANGE. Just last night a guy wanted a liniker. His system was so messed up that the 1st thing to do was to make it RIGHT (as GOOD as possible, with the best designed antenna for his vehicle, as long as he can stand it, with the coil as high as possible (sorry to all you WILSON DRUG addicts, but this means NO WILSONS)! So with the system then PERFECT (as good as possible) he is experiencing MORE range than before, MORE $$$ left in his pocket, and NO liniker to make the N8 commies happier! Now I don't care what the N8 commies think, but I AM a CB shop that gets people the MOST amount of range, for the LEAST amount of $$$$! You can be 'walkin da dog, without being a HOG ! I mean POWER HOG; amperage HOG, and finally but not least, a Channel Master HOG ! Sorry Channel 6 people, but da depression is here, and we can't afford da BIG watts no mow!
Dave!!!!!!!!!!!!!!!!!!!!!!

I agree, you can have the best radio in the world, but if your antenna
is junk, and the setup is junk, your performance will suck.

Both cases sited here ARE CORPORATIONS and thus have NO
Constitutionally secured God given rights! Individuals (God created Human
Beings) HAVE those rights, because WE made the Constitution to LIMIT the
government, thus corporate entities in commerce have NO rights to be
UNlicenced! Ain't you glad there IS a difference between "artificial
persons"(man made entities), and God made people!!!!!

> you PROVE your ignorance to the entire concept.

The ignorant one is you Tim. What a hoot. The "contestants" that are at the moment "competing" judge each other! Like I said before -

"The judges are about as honest as the ones at the Winter Olympic ice skating contests."

You could have put a few more seconds of thought in to your statement above Tim so you don't sound so dumb. And you still can't demonstrate to the group anything supporting wild claims you made about the "contests" being about ERP when the judging is based on the audio output from a crappy CB radio. Put some solid science and theory behind your claims that make sense. Lets see if you really know what the heck your talking about.

2206. Searching for Alps Snap switch

Newsgroup: rec.radio.cb
Date: 2002-02-24 23:56:12 UTC
From: "Dennis B." <dennisandcarol@attbi.com>
Message-ID: <w4fe8.18308$dK1.63606@rwcrnsc54>
Source record: 116518

I'm searching for the on-off -volume switch for my cb base. The radio is the Realistic Navaho base mobile unit.
Radio Shack said that the switch was no longer available.
I was wondering if anyone knew of a source where I could get a new switch or might have one of these radios that no longer works that would be good for parts. I've already searched all the internet sources that I could find with no luck The numbers on the old switch are: "Alps Snap Switch TV-2 5J141110 H892 690-R-541-50K". I'm not sure which set of numbers identify the switch so I copied all the numbers that are on the label.
If anyone out there can help me get my radio working again it would be greatly appreciated. Please respond to this post or e-mail. Thanks for any help.

Dennis

2211. HOW MUCH POWER did you 1st have when starting on CB?

Newsgroup: rec.radio.cb
Date: 2002-02-25 00:35:18 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3c7989de$1@news.planetc.com>
Source record: 116523

Yep, did you ever think again of what you first had when starting on CB, and what you have now? I started out with 100 milli-watts ! Yep, for you yuppies it is a hand held; we called it a Walki-Talkie then & now. Some were more powerful than others. Some of us hooked 2- 9v batteries in series for more power, mostly we just hooked them to TV antennas OR heating ductwork in da house for more range. Or we may of messed with the tuning slugs for "peaking up" or to hear the 27mc SW band early evenings! Then we got a REAL CB and antenna. WOW ! 3-4 watts now! Now we is in da BIG TIME. Talking to people miles away! Listening to those BIG time stations on the 100mw unit made them bigger than life! Boy they boomed in from 1/2 mile away! I remember going over to a school friends house and seeing his dad on a Tube base in the early to mid. 1960's. Man that looked impressive! SO do the newest units I have made in '76 by Teaberry 40 channel digital readout! Man I was scarred to talk on 100mw, or 4 watts. Look @ us now! I guess 40 years makes a difference in da CB world! Also remember listening to Hams on 10 meters on AM mode on a SW radio I helped build around '70 or so. Any more of them on AM today there?
IF the newsGroup is boring, then who's fault is it? YOURS ! Let's get HYPED TYPING digital blurbs to da satelite to get things ROLLING again, 10-4 ? !!!!!!!!!!!!!! CQ-DX !
KEY DOWN, SERIOUS KEYERS (not Hambo CLOWNS)!!!!!!!!!!!!!!

Southwest shall secede
from U.S., prof predicts
By Frank Zoretich
Tribune reporter

Charles Truxillo, a professor of Chicano studies at the University of New Mexico, suggests "Republica del Norte" would be a good name for a new, sovereign Hispanic nation he foresees straddling the current border between the United States and Mexico.

The Republic of the North -- he predicts its creation as "an inevitability" -- would include all of the present U.S. states of California, Arizona, New Mexico, Texas, plus southern Colorado."

Stretching from the Pacific to the Gulf of Mexico, it would also include the northern tier of current Mexican states: Baja California, Sonora, Chihuahua, Coahuila, Nuevo Leon and Tamaulipas.
Its capital would probably be Los Angeles.

Truxillo, 47, has said the new country should be brought into being "by any means necessary."
But in a recent interview at a coffee shop near the UNM campus, Truxillo said it was "unlikely" civil war would attend its birth.

Instead, he said, the creation of the Republic of the North will be accomplished by political process, by the "electoral pressure" of the future majority Hispanic population throughout the region rather than by violence.

"Not within the next 20 years but within 80 years," he said. "I may not live to see the Hispanic homeland, but by the end of the century my students' kids will live in it, sovereign and free."

Truxillo said it's his task to help develop a "cadre of intellectuals" to begin thinking about the practicalities of how the Republic of the North can become a reality.

In the past, of course, wars have erupted when states seceded from either parent nation -- including the U.S. Civil War to keep the South in the Union and, in Truxillo's quick description, "the Alamo and all that" when Texas declared itself independent of Mexico.

Truxillo said the U.S. Civil War settled the question of secession militarily but not in a legal sense. States do have the right to secede, he maintained, if -- as was untrue in the 1860s -- the rest of the country is willing to let them go.

Professors asked for comment in other departments at UNM were skeptical that politics alone would find a way to make his proposed new nation possible. But, they said, given 100 more years -- well, who can say for sure?

"How realistic is it? That's one of the key issues," Truxillo said. "It's not unfeasible as a premise -- and a realistic possibility when you consider global geopolitical trends. It could happen with the support of the U.S. government."

He listed a number of international developments that he said would have seemed "far-fetched in the 1950s," including the breakup of the Soviet Union, the breakup of Yugoslavia, the apparently imminent creation of an independent West Bank Palestinian state agreed to by Israel, and ballot-box separatist movements aimed at achieving a Quebec independent of Canada.

The "tide of history" is moving the U.S.-Mexico border region toward political autonomy, Truxillo said.

Why does he think there should be a new Hispanic republic?

It's an idea that has been suggested before. In the 1960s, during the height of Chicano activism, something similar -- a sovereign Hispanic homeland to be called Aztlan -- was proposed by Rudolfo Gonzales and others.

When Truxillo was 14, he first met Reies Lopez Tijerina, leader of a group of New Mexicans who seized the courthouse in Tierra Amarilla, the Rio Arriba county seat, in 1967. It was a protest against Spanish land grants being taken by the federal government and set aside for national forests.

In October, Truxillo was a speaker during a ceremony at UNM's Zimmerman Library honoring Tijerina when he contributed his personal archives to the library's Center for Southwest Research.

At the event attended by about 300 people, Truxillo said it was from Tijerina that he had learned "that I was a member of a people with a country that had been taken from them by war, a land that was our own by treaty."

He listed a number of Spanish and Mexican treaties dating back to 1494 and ending with the Treaty of Guadalupe Hidalgo in 1848, by which Mexico granted to the United States -- after the Mexican-American War -- possession of parts of what are now California, Arizona, Nevada, New Mexico, Colorado, Utah and Wyoming.

"None of the rights of the Treaty of Guadalupe Hidalgo were fulfilled," he told Tijerina. "None of the obligations were upheld. You told us this was our country, our patria, and that we should fight for our rights, that all colonized and exploited peoples should rise up in struggle for independence.

"We will one day be a majority and reclaim our birthright by any means necessary -- and we shouldn't shy away."

Truxillo's tone was more scholarly during the coffee-shop interview. He said New Mexico is the first "minority-majority state" in which Hispanics and Indians and other

minorities on a national level outnumber non-Hispanic whites.

(U.S. census estimates of New Mexico's 1998 population: 52 percent Hispanic, Indian, Black and Asian; 48 percent non-Hispanic white. The Hispanic population alone was estimated at 40.3 percent. The 2000 census is expected to provide more precise figures.)

Texas is likely to become the next minority-majority state, Truxillo said, adding Hispanics are already in the majority in the border regions of all the Southwest states, largely because of a long and continuing immigration from Mexico.

The "overwhelming bulk of Mexican immigrants are attracted by the American economic way of life," Truxillo said. "Not as attractive to them is the American cultural way of life, but they are willing to make the exchange of economic security for cultural anarchy."

Hispanics in the American Southwest "have been ruled by three empires, Spain, Mexico and the United States," Truxillo said. "Under all three systems, we have failed to achieve self-determination.

"Among native-born American Hispanics, there is the feeling that we are strangers in our own land," he continued. "We remain subordinated. We have a negative image of our own culture, created by the media. Self-loathing is a terrible form of oppression. The long history of oppression and subordination has to end. There has to be an alternative."

Truxillo, who describes himself as a Chicano, said he was born in Albuquerque. He attended public schools in Albuquerque and earned his undergraduate and graduate degrees from UNM, majoring in Latin American, borderlands and Asian history.

He was an assistant professor of history at New Mexico Highlands University from 1992 to 1997, but after being denied tenure there, he began teaching in the Chicano Studies Program at UNM where he is now a visiting professor on a year-to-year contract.

Truxillo said Hispanics who have achieved some positions of power or who are otherwise "enjoying the benefits of assimilation" are most likely to be in the vanguard of opposition to his concept of the Republic of the North.

"There will be the negative reaction, the tortured response of someone who thinks, 'Give me a break. I just want to go to Wal-Mart.' But the idea will seep into their consciousness, and cause an internal crisis, a pain of conscience, an internal dialogue as they ask themselves: 'Who am I in this system?'"

Along both sides of the U.S.-Mexico border "there is a growing fusion, a reviving of connections," Truxillo said. "Southwest Chicanos and Norte&#65533;o Mexicanos are becoming one people again."

Went to a swap meet on 2-23, made a point of looking at the CB stuff for sale there... saw no CBs which are modifiable, although one OM was selling an "11-meter linear" (probably a booby-trap designed to burn out the finals of anyone dumb enough to buy it). Once you've modded a 706, you can't get excited over a run-of-the-mill CB---just try getting a CB to handle FM!

Must admit I was slightly disappointed not to see Voobner show up at the swap meet in his cape & tights... because we all know how a little CB fun is worse than murder/treason/genocide, etc.

Source record: 116535

Hello Dave:

Dear ol Dad traded his Bowling Ball for a old Gonset G-12 tube type CB radio, back in 1965.

I use to take the radio and Dads truck battery, using a 102 inch whip antenna up on the roof, and listen to all the neat CB'ers. Many times I returned the truck battery completely dead, but Dad had the truck facing down hill, and could get it going by letting it roll down hill, and let the clutch out. This probably saved me being hit more times than I know.

Many ah time before going to school, I would suddenly remember I have to put the ol mans battery back in his truck, and go off to school with battery acid on my hands and clothes.

The old Gonset G-12 tube CB had a 12 volt vibrator power supply, that hummed when the radio was turned on. It had a neat smell of vacuum tubes, and had a light in the antenna circuit, that was mounted on the face of the radio, and came on when you transmitted, absolutely great!

It only had 4 channels, it had channels 5, 9, 11, and 15, most guys in 1965 only had one or two channels, Dad said not to brag.

I am sure the radio had a few watts of output, my range wasn't a big thing, but all the family had a ball with it.

I use to talk to a guy named Carl, who had a Mustang, he was a about 2 blocks away. Then other people came over the radio and it was quit a neat thing.

There was a guy in the San Fernando Valley called Rebel on channel 5, who shot skip all day long, and I got to meet Rebel at a CB Break one day. He said he use to run a lot of power almost 7 watts but had his antenna pretty high.

Then the ol man upgraded to a Pace II-S, 12 channel radio, with a 12 volt power supply. Probably didn't want his truck battery taken out any more.

The Pace II-S worked great, and talked all the place, while having a ball. The CB Radio guys had Saturday Morning Coffee get together, and the comrdery was great!

A good time was had by all, and this posting couldn't even to began telling all my CB history, leanings, battles, accomplishments, losses, and friends.

But Dad never knew or didn't let it be known, that the old truck battery left a battery acid hole in the carpet, in my room. Maybe I shouldn't have left the battery charger on so long .... But the transmit light was brighter with the battery charger on ....

Hello Guy:

Was that the TRW Swap meet, near the Los Angles Airport, yesterday?

I ran into my old group, what a bunch of old farts, but there still all nuts as the day is long..... I was always a model child.

We use have this little club, the S.S.S.S. the Seven Six Secret Service.

The memories, and all the Jam Feasts on 2 meter AM ....

The SSSS is still talked about today on the 147.435 Zoo repeater.

How cow, Batman! I had forgotten those 100 mw walkie talkies! Yep, about 14 when I used them. Good for a few blocks, no more ('cept hooked to a big vertical, then maybe a mile, tops). Got my novice ticket at 15, my general at 17, and my extra, 1st phone, and 2nd telegraph at 19. Used 65 watts am - good worldwide. At 19, was using 5 watt mobile CB - stock and had a ball on bunny hunts (man, we made a wrong turn one time and were met by a nasty farmer with a loaded 12 gauge!). Best distance on low power was from Guam Island running 15 watts to Fairport, NY - probably somewhere near 10,000 miles. That, however, was to a 6 element beam up 102 feet over salt water! 'course one guy used to run 15 watts and ran phone patches to the states constantly from Guam - but he was using rhombic antennas 600 feet on a leg, 200 feet in the air - also over salt water. The antenna really makes a BIG difference! Now running 1.5 to 3.5 watts FM on 440 with a big whip (36 inches) and am good for 40 miles into the repeaters - but when I'm up 20 stories, I'm solid into repeaters 100 miles away. Gotta get back on HF ...

SIGH. Read the beginning of the thread, dummy. SD Jones brought
violence into the conversation. I guess to him, illegal CB is worth
killing for. My response was just a little bit of humor (SD Jones
kills the wrong guy, gets caught) that took HIS scenario to its
logical end.

B.S.

RG-8/x is a larger diameter cable with more improved shielding. The 8/x
will lose less signal than the 58. Plus the coper shielding that is in the
58 sucks. It allows signals to leak in and out. Better off to go with the
8/x.

Hear hear!

Kindof like putting $20.00 speakers on a $8000.00 stereo.. It'll still
sound like crap. Put $400.00 (each) speakers on a $200.00 stereo, and it'll
sound SO much better, assuming the speakers are worth the $400.

Can't make good sound without decent speakers, even if the receiver is awesome.

Think about it.

We're talking about CB here. You're trying to steer the conversation over to something that is unrelated. What goes on on USENET, the stamp collectors club, man-boy lovers, etc, is of no concern of mine. As a radio operator (Ham, CB, MURS, FRS, Marine) and hobbyist, I am concerned when certain (unfortunately growing) groups of people abandon common courtesy and respect, and embrace a selfish arrogant attitude toward other users that they are supposed to SHARE these radio resources with.

THAT is the bottom line. Any comparisons with other hobbies and attempts to compare their indescretions (AKA the moral equivilency arguement) with that done on the radio are nothing more than diversionary tactics.

I'm still waiting to see if you truly are a supporter of rude, arrogant and disrespectful behavior, which you would be doing if you support people who run "big radios".

The ignorant one is you Tim. What a hoot. The "contestants" that are at the moment "competing" judge each other! Like I said before -

"The judges are about as honest as the ones at the Winter Olympic ice skating contests."

You could have put a few more seconds of thought in to your statement above Tim so you don't sound so dumb. And you still can't demonstrate to the group anything supporting wild claims you made about the "contests" being about ERP when the judging is based on the audio output from a crappy CB radio. Put some solid science and theory behind your claims that make sense. Lets see if you really know what the heck your talking about.

>NO, they were centralized to make this country into a USSR ! How does it
>save money to set up a central office, and keep the local ones, where hardy
>NO ONE at the central location knows anything of what is going on!

Nah, they centralized with the idea that things could work more efficiently, with people better trained to handle all the small problems/questions that come into the Postal Service every day, and thus save money at the local level. And if it worked like it should Dave, you probably wouldn't be thinking communist plot, you'd be a fat, lazy, happy camper.~g~

Trouble is, there's nobody at the local post offices who have "phone duty" or "switchboard" as their job. And there's nobody at the local post offices who have "complaint department" or "inquiry department" as their job. So each time a person calls the local post office, they're taking somebody away from whatever else they're doing to answer a question or track down a problem. The person closest to the phone gets to pick it up and answer it when they hear it ringing (one of the reasons why a person can call a post office and sometimes get it to ring an hour before someone picks it up -- there's no "centralized" person even at that local office to pick up the phone -- everyone thinks someone else will get it). And many times, the answer a person receives is even less knowledgable than the 800 number is going to give them.

A lot of times, also, local "phone duty" was given to people who had been injured and are either temporarily or permanently on the working disabled list. That unfortunately doesn't mean they were qualified to answer questions or inquiries. So often the caller would sit on the phone an hour waiting to be transferred to someone who *could* hopefully answer the question.

This is going on at a time when the USPS is dealing with constantly decreasing volume and constantly increasing cost, a lot of it general economics, a lot of it post 9-11 stuff. Clerks are being excessed out of local post offices at ever increasing rates, and if they retire, they're not being replaced. Because it does work out to be much less expensive to have one centralized group of people doing it. Why have an extra person at each local post office when you count up the number of post offices in this country, when you can have 1/1000th of that number manning centralized phone banks?

In other words, the powers that be are playing with and changing what they can. Take those teeny tiny rural post offices. They can't be shut down. Yet to save billions of dollars, they *should* all be shut down, and those people serviced out of the closest large town. Heck, towns of only 200 people have their own post office. But try getting just one small post office shut down and see the stink it raises in Congress because every Congressman knows his area could be next, and the voters won't be happy campers, and it'll show in the votes. So they attempt things that will affect everybody yet won't cause anybody to actually bother their Congressman about it and lose them votes.

A large number of Republicans in Congress would like nothing better than to privatize the Postal Service if they could find a way to do it and not lose votes. Privatization ain't communism.

Take the larger repair companies. Sears still has their small repair centers here in northern IL.....but they can no longer be called directly to schedule service. For that, a person gets to call someone sitting at a huge phone bank somewhere down in Tennessee. But the person coming out to fix the washer isn't driving from Tennessee. It just centralizes the "paperwork" and saves money.

Take insurance claims adjusting. Last year I had ice damage on the house in the Chicago suburbs in the living room. Welp, the "claims adjuster" who handled the paperwork on my case was a guy sitting at a huge phone bank somewhere in Georgia! He took all the information from me, did all the paperwork, and then would arrange for someone local to be sent out to look at the damage.....but they would save time on the local employees by having all the paperwork already done for them and ready to go. Agents often used to have secretaries in the past or be able to handle fewer cases. This way they can by-pass having an assistant and also take on more cases, if they have far less to worry about on the claims end. Is it a hassle for people that would prefer to deal with someone they already kinda know.....like their own agent? Sure. Does it save the company a nice amount of money? Sure. Save money and keep the stockholders happy and keep the people paying maybe a little less increase in premiums happy, to me that says capitalism, not communism.

And phone service is not the strong point of the USPS, no matter whether one is calling locally or a centralized number. Having a centralized number also means a *lot* less time for the local post master to handle complaints on the way his/her clerks handle the phone calls. Much easier on all the local post offices to let customers get upset and frustrated at someone sitting at a huge phone bank in outer Mongolia or someplace.

Just wait.....next step in saving money
is to move the Postal Service phone banks to Mexico. (Read the fine print in NAFTA.) Either that or change the central number from a 1-800 number to a 1-900 number and callers can pay by the minute.~g~

2249. Antenna interference in rural area?

Newsgroup: rec.radio.cb
Date: 2002-02-25 14:03:57 UTC
From: appaloosax4@aol.com
Message-ID: <20020225090357.24554.00000299@mb-cb.aol.com>
Source record: 116660

OK, we've completed the move from the Chicago suburbs to the outer mongolia of corn country out in DeKalb County. My closest neighbor is now a good quarter mile away and the next closest is a half mile. I like the idea of raising children out in a country atmosphere, tho the commute to work is rather a pain. But, fergit the kid, fergit the commute, is the move a good thang for keeping antenna interference away?

I'd like to put up an antenna to use the radio at home. I have fun listening to it while I'm doing housework, taking care of the animals, etc. But I remember the awful time that Doug's ham equipment gave some of the neighbors with their phones, TVs, stereos, etc. back in the suburban neighborhood. And I don't give a hoot whose "fault" it is, the radio stuff or poorly constructed appliances. If I look into doing the antenna thang, will the distance mean the neighbors won't be bothered anyway, if how I do the antenna is faulty or if their appliances are faulty?

What I'm asking is.....in the suburbs, the houses were only 50 feet apart, so this quarter mile and half mile seems huge to me. Will it seem huge to the antenna too?

Maggie

>

That is pure B.S., unless you subscribe to the theory that the laws of physics and RF change when they fall on 11 meters.

An "S" unit is calibrated in units of 6 db. It takes a doubling of power to increase 3 db. So, to increase signal level from "S7" to "S8", would require taking a carrier power of 4 watts and increasing it to 16 watts. Something that cannot be done to a "type accepted" CB without internal parts changes.

Now we all know that most cheap CB radios do not have "S" meters that are either linear or calibrated to any great degree. 2 or 3 db might move an "S" unit at the low end of the range, while it might take 8 or 9 at the high end. The math doesn't lie, but most likely your meter is.

As for modulation. Most "AM" only radios are high level modulated from the output of the audio amplifier chip. This IC is typically rated to no more than 4 watts of audio (3 watts is more typical at 10% distortion). Note that this is the maximum power rating, and at that level, you are running practically a squarewave output.

High level modulation requires that 50% of the carrier power's wattage be applied as audio modulation in order to achieve 100% modulation. That means for a 4 watt carrier, you need 2 watts of audio power for 100% modulation.

Now if a screwdriver jockey ups the carrier power to 6 watts, you will now need 3 watts of modulation power. You are now near the power amp's maximum power rating, considering transformer losses, and your waveform will start to squarewave. Any more carrier power (if possible)and you will no longer be able to fully 100% modulate your signal (and what modulation IS there will be severely distorted, and splatter will result).

This is not "hambo theory" this is reality. Peaking a radio for one or 2 more watts will be virtually unnoticable, at least until you tell someone, and then they might say "Oh yea, wow, you sound great now!".

Anyone "in the business" that at the very least, does not have an oscilloscope that can display the modulation envelope, and an accurate (read: not a Dosy) wattmeter, and preferably a spectrum analyzer to check audio sidebands and spurious emissions, really has no business tinkering in circuitry when they cannot see first hand just what crap their "handiwork" produces.

Maggie,
With the kind of seperation from your neighbors that
you have now, I think you can turn Doug loose to play
with his radios/antennas with complete peace of mind.
Even if he does something absolutely, completely wrong
with radios and antennas, the neighbors should be far
enough away so that they won't be affected. And besides,
Doug won't make any mistakes with the radio stuff, will
he? I mean, we know he knows what he's doing, right? And
people who live in the country tend to buy 'better' stuff
that isn't affected by radios and such, you knew that,
didn't you? Even if Doug wants to put up a couple of
those 100 foot towers, no one will think anything about it.
Gee, Maggie, it sounds so good out there, would you like to
adopt me?
'Doc

PS - (Doug, you won't believe the great story I told)
(Maggie like you asked. Down-played all the RFI)
(stuff, really 'pumped' her up about the radio.)
(Hope it helps...)

2255. Re: RG-8 Mini VS RG-58 The Argument

Newsgroup: rec.radio.cb
Date: 2002-02-25 15:02:14 UTC
From: 'Doc <w5lz@icok.net>
Message-ID: <3C7A51F3.6AEE75AB@icok.net>
Source record: 116667

Joe,
It really just depends on how/where your going to use
the RG-58 and RG-8x. In general, RG-58 isn't 'better'
than the RG-8x, and in a few specific instances, it's much
worse. Assuming that both cables are of equal quality, the
major differences are in signal loss in long runs, and slightly
less power handling ability. For short runs, and moderate
power usage, there's really little difference in the two.
For that matter, there's little difference between short runs
of RG-58 and RG-8, or RG-213, or '9913', aside from the power
handling ability (less than about 250 watts or so). So, which
ever 'side' of the argument your on, you'll have some basis
for argueing the 'pro's and 'con's of RG-58 and RG-8x.
'Doc

I started out with a radio that put out 2-watts.. My fathers... Although I had a Texas Star DX-250 at my disposal when needed... So I guess you could say that I started out with probably about 150-watts...

Nononono sweetheart, Doug and I aren't attached. Doug hasn't lived with me since around Feb of 1999, and we were only together a few months. Doug and I were not compatible to say the least. ~g~ Two yins, two yangs, who knows, but we didn't get along.

I'm reattached and except for the occasional times he makes short phone calls or writes short letters, or the occasional friends he's asked to drop by, we happily have nothing to do with each other. So the antenna will be my toy, not Doug's.

So now, are you really serious that I shouldn't have a problem or could the antenna cause problems? ~g~ This "country" is DeKalb County, not Lake County. "Better" stuff in this neck of the woods can mean a flush toilet.

Maggie

Twistedhed wrote:
I didn't avoid an answer. My comment applies to the way I handle myself
on Usenet. I cannot speak for anyone else in this regard.

-You can't offer your opinions on usenet troublemakers but you freely
offer them on said cbers? Pretty selective.
-
We're talking about CB here. You're trying to steer the conversation
over to something that is unrelated.

-HEhehe, Dave! If you're bored, just say so, I can arrange it so you may
discuss the finer merits of participles with your second choice.
I'm not steering the conversation anywhere. It was over and done with,
but if you're feeling especially froggy this morning, go ahead and leap
and we'll dissect your post one flawed line at a time, beginning with
the dates on the your posts and responses to several other threads since
this one was ended. It tells us several things: A) You're bored
B) You're incorrect
C) You can't follow the posts
D) You alone are steering the conversation which supports
another self contradiction and incorrect assumption/accusation on your
behalf.

What goes on on USENET, the stamp collectors club, man-boy lovers, etc,
is of no concern of mine. As a radio operator (Ham, CB, MURS, FRS,
Marine) and hobbyist, I am concerned when certain (unfortunately
growing) groups of people abandon common courtesy and respect, and
embrace a selfish arrogant attitude toward other users that they are
supposed to SHARE these radio resources with.
THAT is the bottom line. Any comparisons with other hobbies and attempts
to compare their indescretions (AKA the moral equivilency arguement)
with that done on the radio are nothing more than diversionary tactics.

-Call it what you may. According to Lelnad, ignoring the question makes
you guilty. We'll accept his theory in your particular instance.

I'm still waiting to see if you truly are a supporter of rude, arrogant
and disrespectful behavior, which you would be doing if you support
people who run "big radios".
Dave
"Sandbagger"

-What I happen to support or think should be of no concern of yours.
Your above statement again self-contradicts. When you decide which topic
you wish to cover, come on back for another education. You're welcome.

Dave,

There is still a little AM activity up on 29.000 MHZ. I do that sometimes
just for kicks. I got
on AM one day and talked back home while about 70 miles away using a 500
watt Amateur amp. Lotsa fun. I know Richard McCollum "hates" AM, but I
even do a little AM down on
40 meters--but not every day. It's just something different.

And for jack-diddley who the hell cares. My problem with AM is that it is
far too easy to screw up and appears on new rigs only for the illegal
market. It has its place but it sure is not on anything that purports to
be new or leading edge.

Dick, NBK Big Kahuna (I like that!)

Don't sweat Aaronia (she is female, you know) you will find the VEs in most cases are pretty straight guys and with a few exceptions over the years you will find most radioactive types are at least semi-reasonable when the hobby does not become a personality extension. Much like drunks, beware of those whose personality changes under either the possession of a mike (or keyboard) or under the affluence of incohol. While I do not believe a word of it, Aaronia claims to be ticketless.

You do not indicate whether you are taking the code test (Element 1) or not and it makes no diff except for the paperwork you will get. You can take the writtens in order until you fail one so if you get thru 2 and 3, by all means take 4 as the VEs will more than likely suggest. I suggest this for several reasons:

1) it is free. You paid the $10 for the entry not the exams.
2) You get a free peek and may get lucky.
3) People underestimate what they have learned. Ask Bert who sweated bullets on the code and copied the whole thing.
4) It helps the stats to have people fail it from taking it cold.

Same old websites:

http://www.arrl.org for all sorts of good poop. I might join up one of these days.

http://www.qrz.com for some good sample exams

http://ah0a.org for Morse Academy a good code package. The ARRL material reputedly is not too shabby either but this is free. Buy a cheap set of headphones at Walmart to prevent assassination by your family. Exam is Farnsworth-- 15wpm characters spaced to five.

Good Luck, hang by your thumbs, and write if you find honest work.

Dick NBK

That's for "Phoning Home". I think back in Dick's day, they referred to it
as the "ET" knob.

Thanks... I kinda figured that out it had been modified when I looked up the unit "after" I posted the message (shoulda looked before I posted right? Duh!) Anyway,someone has a 6 position switch where the headphone jack used to be,but obviously pulled out whatever was there,because the switch is no longer hooked up to anything at all.
The am seems to work,I can transmit to a CB nearby,but the sidebands,which I've never used before seem only to recieve (I get no swr at all on the sidebands when matching antenna,and using a frequency counter,it will read the am frequencies,but shows nothing when I try transmitting on sideband,although a field streangth meter seems to show a slight reading. Where can I get a schematic or somehow get this back to original shape?? And is it worth it? (I paid 50 dollars for it)
Oh,also the switch to go priorty channel 9 doesnt work either....maybe someone knows what the modifications could have been and how I might reverse them??
Thanks!

1/4 mile now, compared to what was 50 feet.....equals 700 times
less interference. This is with all other things equal.

So.....Hmmmmm.....If you ran 4 watts before.....you can now
run 2800. And nobody will know.

Part of it is power, true, but another factor is location and type of antenna. If you could find a somewhat quiet channel you might work coast to coast using 12 watts sideband with the proper antenna.

There are serveral reasons why you hear him and he does not hear you. Certainly one of them is that for whatever reason, and power can be among them, he hears someone better than he hears you. There are those who disagree but I will still maintain that paths are not 100% reciprocal.

You noted that you are mobile which pretty well means vertical which in general means a low angle of maximum radiation which is an advantage on multi-hop DX but may not be one on single-hop conditions. I give you an example from years past on 75 meters which is D-layer about 600 miles per hop. I am in St. Louis listening to three guys with roughly equal sigs spread from about Toledo, to east of Cleveland, to Buffalo and I am on a Hy-Tower which is an honest quarter-wave vertical on 75. For whatever reason I toss in my call sign and the three make sure all can hear me. The guy in Toledo says fine but nothing remarkable, the guy in Cleveland says good to strong, and the guy in Buffalo asks how many kw I am running. In this case the antenna was the whole thing and verticals are not reciprocal transmitting and receiving or at least not so you can tell it in a receiver with decent AGC. They will respond to sigs coming from goofy angles but are not about to transmit back the same way.

You will find serious DXers on the ham bands often run antenna farms and in fact my Hy-tower came from a guy who at the time was in the top 10 on

DXCC and had a wild hair for another one. Now you know why. I've seen guys with remote crank-up towers raise and lower them for takeoff angle.

Long and short is that given antenna setups are not reciprocal even if you believe the path is.

Ok i want a vertical horizontal beam antenna i talked on my friends yesterday
now i want one what would be a good one for under 200 dollars

Well, you've figured out the phone thing. If you look at the back of the ch
9 sw brd you should see a few cut traces on the brd or some cut off wires.
Try to match the wires up to where they came off the brd or replce the cut
traces.

The ssb thing you mentioned sounds like you didnt apply any audio from the
mic.
On ssb you wont see any output until you make a sound into the mic.
You want to make sure the mic gain is turned up sufficiently to allow mic
audio to modulate the radio.
If you've got the mic gain up and it works on AM ok, then you may have a ssb
problem after all. Yes it's worth it, money wise, to drop a few bucks into
it. You'll have to decide if another 50 is worth it.
In general, there's no point to using ssb to check swr. Just rely on the am
only readings.

Combination automotive AM/FM/CB radios were fairly common in the late seventies even as factory options. GM offered combo radios with built in 8-track & cassette players for quite a few years but I doubt any similar radio is currently manufactured.

>In that case disregard everything after " 'Doc " !

So you're saying my pig farmer neighbor will stay a happy camper even if I goof up. Good, I'm happy then.

The pig farmer is the farm half mile over. He plays classical music all day for his pigs.....says it makes them better mommas. I do *not* want to goof things up with his sows and hurt his radio reception.

Now.....what brand of antenna is best and at what height do I put it or will whoever I buy my toy from be able to tell me what comes after forkin' over the money for it? I'm not really interested in talking on it because I'm working while I'm listening, but I want to hear folks from as far away as possible. As long as the antenna can't pick up pig noises.....oh gawd, it *won't* pick up pig noises will it?

Maggie

From: hitek@aol.invalid (hi-tek redneck)
who the hell is this cadillac man and what kind of big radio this fucker got? Got to be 1500 or 3000 watts maybe more.
He seems to be somewhere around Brownsville Texas, but he's coming in loud and clear on the east coast!!! He even breaks the daytime AM static walks all over the locals.
There's another one a spanish lady, sounds like a recording. She's on every evening about the same time on 19.
I've been listening to these two for years and was wondering if anyone else hears these broadcast?
Cadillac Man is advertising his tour service were he will take you down to some whore house in mexico were they serve puerto rician neck ties and take all your money. He's got free liquor and girls on the bus. Sounds tempting doesn't it? The prices start high but as the bus fills he comes down in price even as low as $35.
--
I've heard this guy a few times before but always thought he was in SoCal. May be a semilegit thing, acting as designated driver and taking a bunch of tourist gringos to a tourist border town just on the other side of the border to get their kicks. Tijuana and Mexicali come to immediate mind.... Texas, I dunno..
Far as the espanol senorita, eeet ees a way of life down heeere in Deeexie on the cb, si? Mexico, the islands, it goes on and on..

get a maco "comet",or a y-quad,or a maco m-103 h/v.those should all be under
or close to 200.00. for 230.00 you can get macos "shooting star".very close
in performance to the old moonraker 4. personally,id spend the extra 30.00
bucks and get the shooting star...an ass kicking antenna! go to
www.copper.com and check these out. good luck,and good dx-ing!

"cadillac man" is located in elpaso,tx. he and" pappa smurf "tie up channel 19 all the time trying to lure truck drivers to go on their trips to the mexican whore houses.we get tired of havin to listen to their crap,but hey...they are there to stay.i personally shut them down for a few days with a handy talkie and motor cycle battery built into a 50 cal ammo can with a 5 foot fiberglass whip installed on the lid.....what fun....i hid it in the desert just behind their operation located behind the petro truck stop.they thought that their radios had burned out.i never laughed so hard in all my life,listening to them call to the truckers with their "ears plugged" but it was too much trouble to keep them tied up,so we decided to let-em do their thing. hey ,if yah feel like comming down to elpaso and cut their coax...you wont hurt our feelings.....:) have a great day.elpasogunslinger

Randy,
It's true for VHF too, except the definition of
'long' and 'short' (runs) are much smaller.

That's what partitions are for. I've run XP for almost 8 months on one box
and several other flavors on others.

Make a DOS only, or, a 95 partition and use all your oldies to your hearts
content.

I am planning on being there, as is a friend of mine Shelby WA8FVT,
and another friend was planning on going also, the assistant emergency
services director of the Greater Toledo American Red Cross. Rick just
spent a cubit butt ton of $$$ outfitting their communications room.
I'd love to have their setup. I am also interested in setting up an
IRLP node. So I will be looking at both radio equipment, as well as
computer equipment.

I personally do not have anything but a ratshack 200 mw HT, Shelby
will most likely have all of his gear, and I also know that many from
the fulton county club will be there, I hang out there on the midnight
madness net at 11:00 pm m-f.

One evening I was driving home from napoleon on US 6 heading to my
house, I was talking to a friend of mine back in napoleon on channel
13, anyway curt (undertaker) and I were talking and some guy comes
back and asks me where I am. I told him and he's freaking out, he was
hearing me in florida. He couldn;t hear curt, and curt couldn't hear
him. After that I more or less came to the conclusion that RF
propogation is a big mystery, and I wanted to learn more about it.

Same thing happened another time as I was heading from Defiance to Napoleon on St. Rt. 281 some guy in atlanta could hear me but he couldn;t hear my friends in their homes on their base radios.

Both times I was running a stock 148 GTL and a 102" whip. I miss that setup.

I have these two readio and was wondering what they might be worth I am planning on selling them as I do not use them anymore. Anyone have an idea as to a reasonable asking price. They have been in a box for a long time but hooked them up and they seem to work just fine still. any help is much appreciated.

Stephen...

#1 is a Teaberry Big"T" 23 channel base station, no idea how old this unit is

#2 is a Radio Shack model TRC 421A 40 channel, it is about 22years old

> That is pure B.S., unless you subscribe to the theory that the laws of
> physics and RF change when they fall on 11 meters.

You didn't answer THE question. We're not talking about "cheap CB's"
without S meters here. I have seen with my OWN eyes that a couple watts
more and more modulation DOES make the receiver's S meter go up an s unit to
3 units! WAS I seeing things? Others have noticed it too. Someone PLEASE
explain this to the theory geeks!

>
> An "S" unit is calibrated in units of 6 db. It takes a doubling of power

> require taking a carrier power of 4 watts and increasing it to 16 watts.
> Something that cannot be done to a "type accepted" CB without internal
> parts changes.

You're right on that, but I GOT the increase without the 16 watts!
SO HOW does it do that in REAL life? !

>
> Now we all know that most cheap CB radios do not have "S" meters that
> are either linear or calibrated to any great degree. 2 or 3 db might

NO, the meters used was a full REAL S meter that is on most
expenxive units (over $75 cost).

>

NOT if it is set all the way up! On most CB's it is not too loud and
is used by the extra watts also increased.

>
> This is not "hambo theory" this is reality. Peaking a radio for one or 2
> more watts will be virtually unnoticable, at least until you tell
> someone, and then they might say "Oh yea, wow, you sound great now!".

I'm talking about LOOKING at the receive S unit meter, doing the
tuning, and the receiver reporting AN INCREASE. YOU can't explain it.
We're talking base stations for the most part, where people actually SIT and
make notes of where a signal was before, and after. WHY then did it go up?

>
> Anyone "in the business" that at the very least, does not have an
> oscilloscope that can display the modulation envelope, and an accurate

You are talking about "modulation kit" installers here. Those FEW
of us out here who get the POWER up too, don't have the splatter problems
that the mod. kit installers do!
Unless you can explain WHY the S meter went up, I guess you is SANBAGGED to
Hambo theory that only exists in schools, but NOT the real world!

> Train, How about you write the FCC and tell them that.
> Do you think your disclaimer on your website protects you in some way?
>
> Perhaps Aaron will post the rules for you again regarding this matter.

No prob.

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture,
sell or
lease, offer for sale or lease (including advertising for sale or
lease), or
import, ship, or distribute for the purpose of selling or leasing or
offering
for sale or lease, any external radio frequency amplifier or amplifier
kit
capable of operation on any frequency or frequencies between 24 and 35
MHz.

In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.

THIS IS the CB newsGroup, no CW allowed here! The man's question can basically be answered by this: Sometimes they are running more power, sometimes the conditions are right so they can hear you; sometimes like the other guy said, it is only 1 way. It is as mysterious as a Ham on the CB newsgroup! What is he doing here? Can I try to talk to him? IS he hearing me? I keep hollering, maybe he'll eventually hear me! I talked nationwide on 4 watts! WOW ! Did I go over the 151 N8 mile commy approved "limit?" If I do, without knowing or trying, am I still in violation of plank #6 ? ! Dave!!!!!!!!!!!!!!!!!!!

>i want a vertical horizontal beam antenna i talked on my friends yesterday
now i want one what would be a good one for under 200 dollars<
PDL-2 $140 Apx 2 element quad
MACO M103HV $175
3 Element
2 Beams on 1 Boom
10-11 Meter Vertical/Horizontal Beams available
http://www.majestic-comm.com

I like the M103HV but the Quad has the same gain in a same size package. Both
only require a basic TV rotor.

>if I can hear them skip to me..
then why can't I skip back to them where they can hear me as well?<
Jay, You can hear the skip come in but as far as getting your signal back to them may require some technical points. What type of antenna are you using? Type of radio?
Have you checked your SWR or Match?
Most often, a mobile unit will have a tough time getting thru the skip, that the station you hear, is hearing. Oh and Poor Old Aaron Voobner will tell you it is still illegal to talk farther than a distance of 150 miles, but he can go to hell. Ah what am I saying, he's already there(the ham bands)! Bottom line? You setup a radio, good antenna and I expect you will need a small RF amplifier to get the signal from your mobile up to the levels that other stations can hear. Oh yeah, someone will post that they run a stock radio, 4 watts AM or 12 Sideband and they talk plenty of skip without a "helper". Hogwash. They end up in the static like all the other QRP stations....
they hear...."Can you repeat that" over and over....they know it but wont admit it.
Get the radio and antenna lined out then work on other ideas. Start with the basics.

"If it aint broke, don't fix it"

>i installed a new antenna on my galaxy 949 and now when key down my power reading drops to 0.<
Check for a short circuit in your antenna system. Put an ohmeter lead on the center conductor and touch the other lead to the shield. Any reading?
If so you need to find the short.
In the coax or in the connectors. What type of coax are you using? Is it new?
New coax is cheap compared to the price of a radio.
Check the antenna mount. Many can easily be miswired.

Hahahah. I bet you had'em scratchin their heads till their bald spots
shined.
These guys are ok. I've used them before. Hahahah and before anyone says
anything I better add that I didnt go to boystown or anything like that. It
was me and the ex and another couple and all we did was shop in the markets
downtown.

Hey gunslinger, we were almost neighbors. A few yrs ago, I was interested in
one of those new houses on top of the hill around exit 11 or 12. They were
still building them and the prices werent bad. I just couldn't get the (now)
ex to budge...and it was more her idea to move to El Paso. Oh well. If it's
got tits, tubes, tires or transistors...it's gonna give ya' trouble.

Again Leland with the made up post, if you are
going to post it, at least post the original, not some
snipped and paste job.

Message-ID: <nQEe8.49047$2v1.1643121@e3500-atl1.usenetserver.com>
Source record: 116638

Sandbagger,

Dave/Debbie HAS to debunk the correct and accepted engineering basis in order to continue
the business, doncha see. After all, if the consumer were to find out that the "Loud 'n Proud"
stuff they sell is imaginary, they would no longer have a business. After all, so many untrained
CBers WANT to believe this SO bad, that it makes for easy pickin's.

It's like the coax length thing which is utter bull**** and only lives in perpetuity on 11 meters.

> If so you need to find the short.

This may, or may not, be the case. Unless the antenna is a 1/4 wavelength
whip - then it is likely to have a tapped loading coil at the base.

If so, it will show a DC short. This is normal.

Mid seventies if I recall correctly. I believe they had slide controls for volume and squelch. Estimate $25 in working condition perhaps slightly more to a Teaberry collector.

you are bette off going to a local retailer (Cb shop?) and buying one for less money and be totally legal. cobra still has thje 148 gtl mobile (get a power supply and its as good as a base unit).

Otherwise, you are asking for trouble with a capital "T".

Hi,

Just thought i would post my site url on the group
incase anyone is interested in checking it out.
It has a couple of small programs to do with CB's
and one mod for the upd858 at the moment.

Leave a message in the guest book.

http://www.geocities.com/cybacreep/

Sorry guys, but I gotta give the devil his due. I don't think I've ever read Aaron busting chops over the 155.3 mi. limit. Unless, of course, it's done with an amp, export rig, or a converted ham rig. The rule's unenforceable and just plain silly. If the ITU requirement re. CW does actually go away in 2003, this rule will lose it's suppoting crutch. Oh yeah, third party traffic? Prohibit it...end of story.

Bert:

1. How does changing 25.5 affect Land Mobile??

2. Third party traffic is already prohibited and in fact is in the Geneva Treaty of 1927, the first radio treaty. Why is that going to be obeyed any more than the distance rule??

Far as Aaronia, take your word for it.

You are correct Jeff. But if the guy bought his PC with XP preinstalled, and only got a "recovery" disc with it, that might not be an option.

Not everyone tried all the beta flavors of XP, as I assume you did, because XP has not been out but 6 months. Personally, I *found* an image file of XP Pro Corp, with the volume licensing key, burned a bootable disc of that image with ISO Buster, and have been using it since it came out. Don't tell Aaron. Anyway, I don't use many old 95 programs, and Morse Academy is the only thing I've tried that I couldn't run with XP.

We ARE talking about cheap CB's WITH "S" meters. If you think that
because you paid $149.95 for a "Cobra 148" or whatever, that it makes
the "S" meter accurate, you're naive. I have $1000 ham radios and the
"S" meters are still not accurate. They're abit better than a typical
Cb, but the linearity is still not there.

Which is STILL inaccurate and non linear.

You can't get more power out of an audio amp than it's maximum output.
The modulation limiter only limits the amount of audio to what it takes
to make 100% based on a 4 watt carrier. removing the modulation limiter
allows the modulator power to increase somewhat beyond that, but there
is still a max limit, and it also drives the modulator to flatopping or
squarewave distortion. Something you would see if you had a monitor
scope. If you have a 6 watt carrier and you have 3 watts max of audio,
you will barely make 100% moduation, and it will be a distorted
squarewave. Something that will not sound as clean, and will also
splatter adjacent channels.

Frankly I'm shocked that anyone would consider such a tuneup to be an
"improvement".

> We're talking base stations for the most part, where people actually SIT and
> make notes of where a signal was before, and after. WHY then did it go up?

I told you, an overly generous "S" meter. Most CB radios have meters
that are very generous at the low end. I've had radios on the bench that

when I jumped 10db on the signal generator, they would go from "S1" to "S5", when slightly over "S3" would've been about right. Once you get to the "S7" to "S9" area, it gets better. Some radios need a bolt of lightning to advance past 10 db over S9.

The bottom line is that the "S" meter was never designed to be an accurate measurement device. It was meant as a relative indicator.

2346. Beacon Experiment on 11 Meters !

Newsgroup: rec.radio.cb
Date: 2002-02-26 14:06:03 UTC
From: timnebo@aol.com420
Message-ID: <20020226090603.12952.00000620@mb-me.aol.com>
Source record: 116557

Beacon Experiment

From: Tony 43AT415, 271AT/DX Greetings all

I will be setting up a beacon during my stay on Nauru with 20watts output into
a half wave vertical. I hope to have it operational 24 hours a day. This is
just a small experiment to help determine propagation paths to Nauru.
Example: Long path EU and Indian Ocean ect...
If you rx the beacon and wish to send a report to me,
please send an e-mail to beacon271@yahoo.com.au with the following
information.

In the subject line "beacon271"

In the body Time received (UTC)

Division _ _ _

L/P or S/P

Signal Report (optional)

Transmissions will be call ID at about 10WPM then a short carrier followed by
an 8 second interval. The frequency will be: 27.400 LSB

* Note: Any e-mails not following this format eg: stations asking for skeds
ect will not be forwarded to me.

Any questions please contact me at

beetle@bigpond.net.au

73's and good luck Tony 43AT415, 271AT/DX

Uniden HR2510 with external S-meter Mod
Best offer or trade for Galaxy Mobile,depends on which model.The external s-meter is kinda neat on this rig,I'll include and external housed s-meter (lighted) and a D104 with the channel buttons,The buttons aren't wired but can be done simply enough,mic is not cosmetically perfect but works fine,also have BRAND NEW 2510 face plate I'll let go with it for the right price or trade.Thanks,Tom

2356. Re: "Peak & Tune" or TUNING UP CB's DOES made a Difference!/Sandbag...

Newsgroup: rec.radio.cb

From: joxendi@bellsouth.net (Jerry Oxendine)
Sandbagger,
Dave/Debbie HAS to debunk the correct and accepted engineering basis in order to continue the business, doncha see. After all, if the consumer were to find out that the "Loud 'n Proud"
stuff they sell is imaginary, they would no longer have a business.

-Hiya, Jerry. Are you referring to a peak and tune job? If you are, I am surprised to see you believe a peak and tune (no, NOT a swing kit) is imaginary. Now, if you would have argued the pros vs. con of such an idea...

After all, so many untrained CBers

-"Unrained cber?" Wouldn't that equal a cber that wanted to do things by the book and become a nocode, or are you implying a nocode is somehow "trained" (not counting my litter of nocodes) by forking over a few dollars for a slip of paper?
Does that "nocode" authorization somehow "train" a hammie in your eyes, Jer?

WANT to believe this SO bad, that it makes for easy pickin's.

-Wow. How did you know what all believe? Hey, Jer, lotto number for tomorrow, you tell me, I'll buy the ticket, halves when we win, ok? Hell, I'll even give you sixty percent.

It's like the coax length thing which is utter bull**** and only lives in
perpetuity on 11 meters.

-Well, most of us are quite happy with 11 meters. It;s you hammies that constantly bitch about it, and it was just a few posts ago that you made yet ANOTHER incorrect biased and generalization statement (That PERPETUATES more bullshit) concerning something about 'some may say something against ham radio".....
Gee, Jerry, do you wonder why that may be when you have been slammming the cb service with a vengeance lately? Matter of fact, can you give me an example of this bullshit you're trying to ply now cocerning ham radio getting a bad rap in here? By who, Jerry? Who do you refer to that is giving ham radio a hard time besides the replies by you government "licensed' hypocrites?
Why is it always you hammies that have a hardon for cb? The perpetuating and generalizations are by your own kind, Jerry, including yourself. Who pushed you off the camouflaged fence?

73
Jerry

2357. Re: "Peak & Tune" or TUNING UP CB's DOES made a Difference!

Newsgroup: rec.radio.cb
Date: 2002-02-26 15:49:04 UTC
From: twistedhed@webtv.net
Message-ID: <2205-3C7BAE70-83@storefull-2315.public.lawson.webtv.net>
Source record: 116568

You can't get more power out of an audio amp than it's maximum output.

-True.

The modulation limiter only limits the amount of audio to what it takes
to make 100% based on a 4 watt carrier. removing the modulation limiter
_Here is where you err. No one mentioned cutting or removing the
limiter except you. Get it together, Dave.

allows the modulator power to increase somewhat beyond that, but there
is still a max limit, and it also drives the modulator to flatopping or
squarewave distortion. Something you would see if you had a monitor
scope. If you have a 6 watt carrier and you have 3 watts max of audio,
you will barely make 100% moduation, and it will be a distorted
squarewave. Something that will not sound as clean, and will also
splatter adjacent channels.

-(Yawn) Feel better?

Frankly I'm shocked that anyone would consider such a tuneup to be an
"improvement".

-No one did. Remember YOU mentioned removing the limiter.

This is not "hambo theory" this is reality. Peaking a radio for one or 2
more watts will be virtually unnoticable, at least until you tell
someone, and then they might say "Oh yea, wow, you sound great now!".

                I'm talking about
LOOKING at the receive S unit meter, doing the tuning, and the receiver
reporting AN INCREASE.

-No, you weren't, either. You were talking about removing the mod
limiter, something that wasn't mentioned till you mentioned it. Wanna
see it again?

YOU can't explain it.

-Nope. YOU can't explain it, which is why you are reaching for such far
corners and inserting dialogue that never existed.

We're talking base stations for the most part, where people actually SIT
and make notes of where a signal was before, and after. WHY then did it
go up?

I told you, an overly generous "S" meter. Most CB radios have meters
that are very generous at the low end. I've had radios on the bench that
when I jumped 10db on the signal generator, they would go from "S1" to

"S5", when slightly over "S3" would've been about right. Once you get to the "S7" to "S9" area, it gets better. Some radios need a bolt of lightning to advance past 10 db over S9.
The bottom line is that the "S" meter was never designed to be an accurate measurement device. It was meant as a relative indicator.
Dave
"Sandbagger"
-
Yup, the "S" meters aren't all that accurate. Still doesn't have anything to do with your original error. Again.

2358. Re: Why Keydowns Suck (Editorial)

If somebody wants the original they can get if they're that interested. Besides nobody on this group has yet to demonstrate conclusively, and verifiable, that any post has been forged by anybody. I get a kick out every time Tim or Twisted accuses me of posting forged messages. Since I'm the one at this end on the keyboard, thus I know exactly what I posted, and seeing them repeatedly making the same old mistaken claims over and over again, they have amply demonstrated their inability, to me, to prove any post as being forged or otherwise. They can't do it to save their life much less their sorry rep's on the group either. Thus I can post the message in question and there is nothing either of them can do to prove it did not originate from the keyboard of Twisted, either through his webtv account, or any others that he uses. They just don't have the resources and the smarts for it.

Because removal of the rule will require that 27MHz CB service be
redesignated. The ideal solution would be a "shared" band. (Or a
portion thereof; i.e. chs. 36 through 40.) I know that some would
argue that it's already a shared band, but then we're only playing a
word game. I'm confident that everybody has a pretty good idea of what
I mean. You once asked me "what's the vision, man?" Well here it is.
(For better or worse.)

1. The return of CB licensing.

2. A 'written' Morse exam with the 43 required characters in two
columns. On the left side of the page, a column with the characters in
CW form and a blank line beside each. On the right side of the page, a
numbered column with the characters in alpha form. Enter the number in
the blank line beside the corresponding CW character. Pass and you
"license" receives a DX endorsement. Viola!

3. As previously stated, prohibit third party communications. Will
some folks ignore it? Sure they will, it happens on the amateur bands

too. That's why we pay taxes to fund Riley's enforcement crusade.

4. Drop that silly 155.3 mi. limit rule! Worried that it will allow a service to "parallel" amateur radio? Bzzzzt, NOT! DX is but ONE of many many facets of amateur radio. I don't believe for one second that allowing DX on ch.'s 36 though 40 represents any "paralleling" of services. That's pure ego talking. Time to move on.

5. Get rid of AM. (Threw that one in just for you, Beer Keg. :-))

> 2. Third party traffic is already prohibited and in fact is in the Geneva
> Treaty of 1927, the first radio treaty. Why is that going to be obeyed
> any more than the distance rule??

No particular reason. Those who are inclined to obey it will, thos who aren't won't. Same as it ever was.

> Far as Aaronia, take your word for it.

Fair enough.

If you keep running the radio with the existing PS, then a 20 Amper should run that amplifier. That's the smallest I'd be willing to go.

One of those 26 (surge) Pyrimid PS's oughta do it (for both). If I were you though, I'd save my $ a little longer and get something in the 50 to 60Amp range.

'Cause you _know_ you're gonna go bigger at some point, right? Never know when that medical condition may need extra juice. :-)

> other retailers are marking them down to $150.00. What gives?

Perhaps the following:

1) Probably going to be discontinued (if they already haven't been).

2) Folks are finding that the work to get them to perform satisfactoraly
isn't worth the price of admission.

3) A hundred bucks or so will get you a stock 148 or Grant XL on Ebay.

Lots of reasons I guess.

Source record: 116584

Hmmm, I bought a Midland 79-280 for $150 2 1/2 years ago, so I doubt they're discontinuing them. Perhaps Midland just expects them to be sold for much mroe, but they sell cheaply to the stores?
Something that would set the 79-290 apart from all other CB's is if they took advantage of the ability to remove the head for security reasons and added a remote mounting capability.

TOM,

CONGRATULATIONS!

I don't think I have EVER experienced a HUM problem caused by a 12AT7 tube in that particular radio, but one thing I have learned over the years is that in the field of electronics, just about anything is possible!

Regards.

Yep, in the early days of radio it was designed for use as a "tuning meter", meaning you tuned incoming signals for a peak "carrier level" meter reading.

Tim, now you quantify your statement with "the greatest erp and loudest modulation" thats not what you or Troll Free said last week. Is it because you were shown that modulation is what will also contribute to a winner at a keydown. and not just erp? There is a difference the station with the loudest modulation doesnt have to have the greatest ERP and they can still win at a keydown, you seem to still be having problems with this.

Exactly. That's why those contests are such a joke. Asking you for "proof"
was an exercise in seeing how deep a hole you were willing to dig for
yourself.

> common sense is all thats needed most times when debating you.

Tim you don't even know the meaning nor the origin of the phase "common
sense". If you did you would realize how dumb you last statement happens to
be too. For example it was "common sense" that when things went wrong in the
village you could blame it on the local witch, now days called an innocent
victim, whom was normally and promptly burned at the stake. Unfortunately
for you "common sense" does not mean that what is a "commonly" held belief,
is correct, and makes "sense". So "common sense" is nothing more than a
belief held by a large group of people, and has little or nothing to do with
the true nature of things at times.

Wow, I didn't think any of these were still around.
Ok, I dont have the sams on it anymore so you'll need to find the components and circuit I speak of.
In the mic preamp circuit you can change the feedback resistor and improve the mic gain.
Then, you can look at the clipper circuit in the amc section, I think. You should see two diodes in series. They are biased by a high value resistor in the 470k ohms range.I think. Try cutting the resistor value in half roughly. I did it by parralleling another resistor of same or slightly higher value. This should bring the swing up a bit while still performing a clipper action.

When you get thru, your stock mic will have the gain of a power mic, thus, you'll need to turn the mic gain down quite a bit. You'll also see a higher peak output on your wattmeter. If you disable the amc you'll get a lot louder but you'll also be putting out a hell of a square wave. Great for making a little bleedover too!

There were several models in the president line that used this mic preamp chip and the clipper circuit.

You could also make the radio go up to 27.665 and quite a dsitance below 26.965 by tricking that chip.

Wow what memories this brings back.

ok thankyou for the responses now a couple of other questions I have:

what does cw mean?

what is meant by a "10 meter" radio? vs a plain ordinary "cb"

What is so cool about this? Your a ham operator and can talk around the world why would this be cool to you?
Just curious.

Many well-meaning newcomers have the same question. Nothing personal against you Jay and this isn't a test of what you know or don't know. I'm just curious to know what you've heard or assumed a "10 meter radio" means. I maintain that the dealers and disributors of CB gear are intentionally misleading folks.

While I agree with some parts of your post, this one has me puzzled.
If I read it correctly, it appears to be a scheme "to get around" the
ITU hf cw requirement. My pet salamander could match up morse
characters with a written key chart. What does that prove? It comes
off as sleazy and dishonest.

If CBers spent just 1/10th the effort they use thinking up ways to
"get around the rules" and applied it to studying the license material
- they'd all be hams.

I still don't see where 25.5 requires the redesignation of a Land Mobile
service although I will agree that it hasn't really been one in years, nor
do I see where calling it a shared band changes the present situation
other than requiring me to be N�BK instead of the Velvet Codpiece. If the
idea is to provide some kind of training ground where we Extras lead the
rookies in righteous paths thru sheer force of sterling personality,
non-nail chewing, and silver-haired wisdom I guess my reaction is Why?
It's a hobby, I don't need a job.

Actually you could do that without changing 25.5. The Brits have M2 or M3
(I can't remember which, the other is reserved for MI6) which basically
requires sitting thru a Morse Appreciation course on a Saturday.

>

Actually I am inclined to agree but that is the price of being a Land
Mobile Service. At least we do not require one party to any conversation
be mobile as a number of countries do.

>
> 5. Get rid of AM. (Threw that one in just for you, Beer Keg. :-))

My problem with AM is that it is so easy to upgescrew by idiots and a
miserable use of spectrum.

I'm also an 11-meter enthusiast. (Or CBer if you prefer.) I don't deny the "hobby radio" aspect that's evolved on the CB, despite having never been meant to be. So when I see a nice idea like this beacon abroad (Or the 20mW CW beacon on 27.1250MHz in CA.) as opposed to the lid activity others choose to focus on, I think it's "cool!"

BTW, if it weren't for CB, I might never have become an amateur. This is were I forst developed a taste for radio. Hope that explained.

Believe it or not talking to the world gets a tad old after a while for an awful lot of people. I would find this more impressive if he told us what the call sign was going to be.

Propagation on HF is not that well understood and the people who did it for a living, RCA Globecom, Tropical Radio Telegraph, ITT Worldcom, Cable and Wireless to name a few did not publish or disclose their trade secrets even at the time. So propagation studies are a valid Amateur activity even if not on Amateur freqs.

Amateur Radio is about 472 hobbies with one name; you just found one of them.

2404. Re: "Peak &Tune" or TUNING UP CB's DOES made a Difference!/Sandbag...

Newsgroup: rec.radio.cb
Date: 2002-02-26 23:52:46 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <VcVe8.63681$2v1.1825671@e3500-atl1.usenetserver.com>
Source record: 116716

What in the world do you mean, TW? We were referrring to the idea that one or two more watts or a little "swang" does nothing to increase the ERS of one's signal. Dave/Debbie was trying to trash the known and accepted engineering theory that it actually takes 4X a given power to make a REAL gain in a received signal--or an upward movement of an S-meter.
Six DB = 1 S-unit--that is, if the S-meter is calibrated. One-half, or 3 DB, is not enough to detect. Many people think that it works like a car; press the gas half-way down, and you get a linear response in "perceived" power. It doesn't work that way.

Lots of CB shops make their livings based on the "linear response" method. Knowing that the natural assumption of the public is to believe that any amount of "more" is better, they can more easily peddle their "peak and tune" jobs. Actually, it is nothing more than a placebo--a sugar pill that makes the customer feel better about his "gittin' out". Truth is, 3-4 more watts and/or more "swang" won't improve anything enough to tell it. OR, it causes harmonics and distortion because the radio was not designed to be tinkered with to start with.

The final point was that "coax length" thing that so many so-called CB "gurus" swear by. Coax length, except for a restricted and few applications, doesn't matter. And, again, if a "shop" can make the meter read a certain value with "multiples of 3", or certain jumper lengths, it means he doesn't have to get out there and prune the antenna, or fiddle with it to get the ACTUAL SWR of the antenna.

Finally, when one has studied this stuff, worked with this stuff, and, additionally, BUILT hundreds of antennas and reads where somebody makes silly statements about PROVEN RF applications and practice, it is very hard not to respond in an attempt to correct the mistaken premises that seemed to live forever--and, yes, mostly on the CB band. Sorry, but that is the way it is. There was no intent in my post against CBers, just an attempt, tho, perhaps, ill-spoken, to correct a couple myths. I AM, tho, very reluctant to be taken for a ride, and that

is what happens to people that don't know very much about radio--or cars, for that matter.
When I see someone saying that, "Them 2 watts CAN be seen on an S-meter, I know it cuz I
seen it", and I know it is imaginary, then I'm a-gonna say so!

Jerry

Twistedhed <twistedhed@webtv.net> wrote in message news:2203-3C7BAC81-511@storefull-2315.public.lawson.webtv.net...
From: joxendi@bellsouth.net (Jerry Oxendine)
Sandbagger,
Dave/Debbie HAS to debunk the correct and accepted engineering basis in order to continue the business, doncha see. After all, if the consumer were to find out that the "Loud 'n Proud"
stuff they sell is imaginary, they would no longer have a business.

-Hiya, Jerry. Are you referring to a peak and tune job? If you are, I am surprised to see you believe a peak and tune (no, NOT a swing kit) is imaginary. Now, if you would have argued the pros vs. con of such an idea...

After all, so many untrained CBers

-"Unrained cber?" Wouldn't that equal a cber that wanted to do things by the book and become a nocode, or are you implying a nocode is somehow "trained" (not counting my litter of nocodes) by forking over a few dollars for a slip of paper?
Does that "nocode" authorization somehow "train" a hammie in your eyes, Jer?

WANT to believe this SO bad, that it makes for easy pickin's.

-Wow. How did you know what all believe? Hey, Jer, lotto number for tomorrow, you tell me, I'll buy the ticket, halves when we win, ok? Hell, I'll even give you sixty percent.

It's like the coax length thing which is utter bull**** and only lives in
perpetuity on 11 meters.

-Well, most of us are quite happy with 11 meters. It;s you hammies that constantly bitch about it, and it was just a few posts ago that you made yet ANOTHER incorrect biased and generalization statement (That PERPETUATES more bullshit) concerning something about 'some may say something against ham radio".....
Gee, Jerry, do you wonder why that may be when you have been slammming the cb service with a vengeance lately? Matter of fact, can you give me an example of this bullshit you're trying to ply now cocerning ham radio getting a bad rap in here? By who, Jerry? Who do you refer to that is giving ham radio a hard time besides the replies by you government "licensed' hypocrites?
Why is it always you hammies that have a hardon for cb? The

perpetuating and generalizations are by your own kind, Jerry, including yourself. Who pushed you off the camouflaged fence?

Oh man, this thread takes me back MANY years.
I started with an old Pearce-Simpson (sp?) tube rig. It could only transmit on five channels unless you plugged a crystal into the socket on the front. It had holes drilled in the top to hold the other crystals which came with it. That radio had to be early 1960s vintage. The antenna, which they told me at the time was a "floppy ground plane" cut for CB frequencies, was on top of the house about 50 feet up. I'm assuming it was 4 watts.
Then I graduated to a Johnson Messenger 223, still a tube model. I installed an Astro-Plane antenna- you know, the one with the ring around the bottom- on the roof. Later I procured a 60-foot tower and mounted a 5-element vertical beam on it. With a 100-watt linear feeding into it, we figured the effective radiated power was somewhere in the neighborhood of 1500 watts. I rode the skip from Canada to Florida to California with that rig.
CB radio was the IRC of its day. Sometimes I would switch off the linear and shoot the breeze with friends in towns all over eastern NC. Then we got our driver's
licenses and discovered girls and the whole CB scene kinda faded. But it was fun while it lasted.
Real radios glow in the dark and get warm.

If anyone comes across a CB QSL card for a station with the callsign KFO3255, please contact me via email ASAP. I let all the copies I had slip through my fingers over 20 years ago and I would really love to have one, or at least a scan of same.

As others have said power can be a factor, but in most cases, and I suspect this is true in your case, when you are in a mobile your reception is somewhat sporadic and selective when compared to a base stations elevated antenna. The party of the selective signal you hear can not hear you because his antenna is of such a height that it is not selective and he is hearing multiple signals that cover you up.

Sorry Marty, big fingers and small buttons again.

The poster is Australian and the rules are Nauru's so it is hard to say what is legal and what is not. May not qualify as a Land Mobile use at the ITU but someone has to complain and get the bureaucrats marching.

Ok, so you are saying that illegal operation is a legitimate step towards getting licensed? I have to disagree with you about that one. How big is the jump from legal CB to a no-code ticket? Not very big.

In fact, it's a bigger step to go illegal, because you have the cost of getting the radio modded (or purchasing one complete with mods), which can be quite a bit more than a simple $40 2m rig. And if you want to get into the same power class you need an amp, which costs that much more. A simple whip for 2m costs almost nothing and is easier to mount than 10 or 11m. After all that, then they have to worry about getting caught. But if IO is just a stepping stone to ham radio, they will end up getting all the ham equipment anyway, so all that expense is for the sole purpose of freebanding.

And how hard is that test anyway? I mean, if all the answers are freely available in the question pool, isn't that almost the same as cheating? You can bet that's what it would be called in any public school or college. Either that or a freebie.

So how hard is it to talk to people on the ham freqs as opposed to CB? Do CBers need some sort of social transition period before they are no longer afraid to key up on 10m? Hardly, and anyone that listens to the garbage on that band knows it doesn't sound much different than CB.

Freebanding isn't a step towards getting a license any more than, say, burglary being a step towards a career in locksmithing, or growing pot being a step towards farming. Aren't there any legal steps towards a ham ticket, like building a few simple electronics kits? There may be IOs that get their ticket, but you suggest that someone could freeband as a step to becoming a ham? Sorry Bert, but your argument is lame.

>Ok, so you are saying that illegal operation is a legitimate step
>towards getting licensed?

I don't recall mentioning anything about "illegal" operation. Please reread the thread from the beginning, Spark.

>I have to disagree with you about that one.

Not with me.

>How big is the jump from legal CB to a no-code ticket? Not very big.

I agree, but there are others who may feel differently.

>In fact, it's a bigger step to go illegal, because you have the cost

I agree with all of this.

>And how hard is that test anyway?

Cake.

>So how hard is it to talk to people on the ham freqs as opposed to CB?

The characteristics of 2m and 11m are very different.

>Do CBers need some sort of social transition period before they are no
>longer afraid to key up on 10m? Hardly, and anyone that listens to the
>garbage on that band knows it doesn't sound much different than CB.

I'm not sure where this is coming from, Frank? I completely disagree with both those statements.

>Freebanding isn't a step towards getting a license any more than, say,
>burglary being a step towards a career in locksmithing, or growing pot
>being a step towards farming. Aren't there any legal steps towards a

>as a step to becoming a ham?

Again, I urge you to reread my comments in this thread. "Freebanding?!"...I never mentioned anything about freebanding being a step toward AR. (Despite it being true for some folks.)

>Sorry Bert, but your argument is lame.

Sorry Frank, it's not my argument.

Not on subject, but hope you enjoy ..

The following are accounts of actual exchanges between airline pilots and control towers from around the world:

~~~~~~~~~~~~~~~~~~~
While taxiing the crew of a US Air flight departing for Ft. Lauderdale made a
wrong turn and came nose to nose with a United 727.
The irate female ground controller lashed out at the US Air crew, screaming:
"US Air 2771, where are you going? I told you to turn right onto Charlie
taxiway! You turned right on Delta! Stop right there. I know it's difficult
for you to tell the difference between C's and D's, but get it right!"

Continuing her tirade to the embarrassed crew, she was now shouting
hysterically: "God, you've screwed everything up! It'll take forever to sort
this out! You stay right there and don't move till I tell you to!
You can expect progressive taxi instructions in about half an hour and I want
you to go exactly where I tell you, when I tell you, and how I tell you!
You got that, US Air 2771?"

"Yes ma'am," the humbled crew responded.

Naturally the ground control frequency went terribly silent after the verbal
bashing of US Air 2771. Nobody wanted to engage the irate ground controller in
her current state. Tension in every cockpit at LGA was running high.
Then an unknown pilot broke the silence and asked,
"Wasn't I married to you once?"

~~~~~~~~~~~~~~~~~~~
The controller working a busy pattern told the 727 on downwind to make a
three-sixty--do a complete circle, a move normally used to provide spacing
between aircraft. The pilot of the 727 complained, "Don't you know it costs us
two thousand dollars to make even a one-eighty in this airplane?"

Without missing a beat the controller replied,
"Roger, give me four thousand dollars' worth."

~~~~~~~~~~~~~~~~~~~
A DC-10 had an exceedingly long rollout after landing with his approach speed a
little high.
~~~~~~~~~~~~~~~~~~~

San Jose Tower: "American 751 heavy, turn right at the end of the runway, if able. If not able, take the Guadeloupe exit off Highway 101 and make a right at
the light to return to the airport."

~~~~~~~~~~~~~~~~~~~
It was a really nice day, right about dusk, and a Piper Malibu was being vectored into a long line of airliners in order to land at Kansas City.

KC Approach: "Malibu three-two Charlie, you're following a 727, one o'clock and
three miles."

Three-two Charlie: "We've got him. We'll follow him."

KC Approach: "Delta 105, your traffic to follow is a Malibu, eleven o'clock and
three miles. Do you have that traffic?"

Delta 105 (in a thick southern drawl, after a long pause): "Well...I've got something down there. Can't quite tell if it's a Malibu or a Chevelle."

~~~~~~~~~~~~~~~~~~~
Unknown aircraft: "I'm f...ing bored!"

Air Traffic Control: "Last aircraft transmitting, identify yourself immediately!"

Unknown aircraft: "I said I was f...ing bored, not f...ing stupid!"

~~~~~~~~~~~~~~~~~~~
Tower: "Eastern 702, cleared for takeoff, contact Departure on 124.7."

Eastern 702: "Tower, Eastern 702 switching to Departure. By the way, after we
lifted off we saw some kind of dead animal on the far end of the runway."

Tower: "Continental 635, cleared for takeoff, contact Departure on 124.7. Did you copy that report from Eastern?"

Continental 635: "Continental 635, cleared for takeoff, roger; and yes, we copied Eastern and we've already notified our caterers."

~~~~~~~~~~~~~~~~~~~
The German air controllers at Frankfurt Airport are a short tempered lot. They not only expect one to know one's gate parking location, but how to get there without any assistance from them. So it was with some amusement that we (a Pan Am 747) listened to the following exchange between Frankfurt ground control and a British Airways 747, call sign "Speedbird 206":

Speedbird 206: "Top of the morning, Frankfurt, Speedbird 206 clear of the active
runway."

Ground: "Guten Morgen. You vill taxi to your gate." The big British Airways 747
pulled onto the main taxiway and slowed to a stop.

Ground: "Speedbird, do you not know where you are going?"

Speedbird 206: "Stand by a moment, Ground, I'm looking up our gate location now."

Ground (with arrogant impatience): "Speedbird 206, haff you never flown to Frankfurt before?"

Speedbird 206 (coolly): Yes, I have, actually, in 1944. In another type of Boeing, but just to drop something off. I didn't stop."

~~~~~~~~~~~~~~~~~~~

O'Hare Approach Control: "United 329 heavy, your traffic is a Fokker, one o'clock, three miles, eastbound."

United 239: "Approach, I've always wanted to say this...I've got that Fokker in sight."

~~~~~~~~~~~~~~~~~~~

A Pan Am 727 flight engineer waiting for start clearance in Munich overheard the following: Lufthansa (in German): Ground, what is our start clearance time?"

Ground (in English): "If you want an answer you must speak English."

Lufthansa (in English): "I am a German, flying a German airplane, in Germany.
Why must I speak English?"

Unknown voice (in a beautiful British accent):
"Because you lost the bloody war!"

2426. RCA Transmitter Reference

Newsgroup: rec.radio.cb
Date: 2002-02-27 02:30:58 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3C7C44E2.58A1EA3A@qnet.com>
Source record: 116738

Hello All:

I am looking for a old RCA book that describes a AM Phone Transmitter, that uses a different modulation, other than the common plate modulation technique.

If my memory serves me right, the RF Driver tube also modulates the carrier, a small amount, and then the finial is a "Linear" RF Finial, that also increases the modulation percent, to close to 100%.

Either its in a RCA Broadcast Engineering Manual, somewhere after W.W.II to the early 1950's, or maybe in the RED RCA Transmitting Tube Manual.

I believe it shows a low power transmitter with common low power type tubes, and such. And the modulation technique, description has the words "Razor Sharp Modulation" in them.

Any help is greatly appreciated.

I have some NOS AM/FM/CB/8 Track Pushbutton units brand new in the box 25 years old. E mail me for details @ truth@planetc.com . Asking for an AM/FM/CB/CD is like asking for a DVD or VCR player built into a 1920's AM radio!!!!!!!!!!!!!! There ain't any! I may still be able to get you a hidden CB that will play through your AM/FM/CD player IF possible. E mail me for details! What year S-10 do you have? I have the BEST antenna mount for one. I have a early '90's one! FORGET the ON GLASS one.
Dave!!!!!

I owned 2 S-10 pickups when I worked as a plasterer, I had a regular cab, and mounted the radios behind the seat, screwed the mount to the metal rim at the bottom of the rear glass. I know on some models, there is a tray on the passenger side, I used to throw my cassette tapes on he tray, you could probably mount a radio there. If headroom is not a problem, there is a overhead shelving uniot available that mounts to where your sun visors mount, that gives you around 2-3 inches and a depth of 6-7 inches to put a radio in. Only other thought I have would be to get one of those hidden mount radios i.e. the radio proper is under or behind the seat, and all controls are in the mic.

Hope this helps.

Hey man, you gonna tell a lie, tell a real Big One.

>
> >Actually I am inclined to agree but that is the price of being a Land
> >Mobile Service.
>
> Ditch the LMS!

Fraid that is easier said. It is kind of a quirk - a good one I think -
in the rules. Freqs are assigned internationally where there is some
reason to do it like ships and planes and the Amateur Service in most
cases and satellites of more recent years although the C band used in most
of the world for DBS digital was and still is a telemetry freq here so
unless we move Vandenberg, we are not going to get to use it. Some go
down to regional level where, like AM broadcast it makes no diff if we are
on 10 kHz channels and the rest of the world is on 9s and we park airport
beacons on Long Wave but it is nice if all of the Americas do the same
thing. The 11 meter band was Amateur by way of Region 2 allocation, not
the treaty in the old days.
You see this also in the 3.9-4.0 and 7.1-7.3 which are Region 2
allocations and broadcast in other places.

Some allocations are just blocks and Land Mobile is one of them and
countries are allowed to pretty much fiddle at will subject to their
neighbors. This is why the DX limit exists in truth, it is the price you
pay for having the countries being able to allocate at will: keep it
within your borders. With CB already worldwide, there is some argument
for your position but this came to pass more or less unintentionally. It
would require some action by individual countries to legalize much as
third-party traffic was done. Just how inclined they might be for CB is
another issue.

The ITU is not the enemy, as bureaucrats go they are much more in the
facilitation than prevention biz. Our FCC does goofy things all the time
such as camping religious and other broadcasters in areas near
international broadcast bands in Fixed or Military freqs with the proviso
that they move if the freq is needed; NASA kicked Gene Scott off 5855 and
all went well. Brother Stair moves off 7415 (WWCR) up band for a similar
reason at nite. These guys are not really obstructionists but they do
like to be obeyed on rare and selected occasions.

What a
> beast!

And the new one is not the beast the old one was. The originals were made at 3415 West Broadway in Council Bluffs IA a bus ride on a Saturday for me as a kid. The World Radio Labs building is now the Salvation Army but the owner, Leo Meyerson W GFQ is still alive and as big a roid as ever. One of the world's truly great harmonic generators.

I don't know about RCA's TN on the subject, but I think what you are referring to is what used to be called two-stage modulation. It is supposed to be a compromise between grid and plate modulation, and was actually used on a very few older broadcast transmitters. It was reported to be highly linear, but wasn't used much because it was too much of a pain to keep working properly, even more so than pure grid modulation -- it has some serious phase issues. The standard plate/screen-grid modulation is much better. But if want to play around with it, look around for a set of old Coyne books.

Winter is having it's last gasp up here. Got snow and dropped to ten
the past few days, but nothing serious. It could be worse tho, we have
had arctic blasts come through here at this time of the year with
temps well below zero.

2450. Re: CB stuff I saw at swap meet

Newsgroup: rec.radio.cb
Date: 2002-02-27 05:35:05 UTC
From: Smokin Cash <ira20@earthlink.com>

Source record: 116763

I have taken the practice tests at QRZ and have only failed the tech once out of about 40 tries. I think I have failed the Gen. 3 or 4 out of about 20. I have never tried the Extra. They are pretty much just common sense. The part that really gets me is band limitations what type of trans. you may use where and at what power limit. Plan on taking test on 3-9-02. I haven't looked at material in a few days now. Need to get back at it. I am not sure if I will make the code test. I have A B C D E down (took about 3 evenings of an hour or two) but then I kinda lost interest for some reason. I downloaded a app. call MORSE123 from QRZ I think.

As for Aronia, not having a ticket changes my whole thought pattern towards her/him/it. I don't know if yall remember my very first post to this NG a couple of months ago. He/she/it was the main reason for the post.

Thanks for the advice!!!

Hopefully I will be asking about rigs soon! I have yet to get one for fear that I could not keep myself from the PTT switch. LOL

I've seen similar "situations" in many hobbies. It usually
is a matter of "not balancing" family, spouse, hobby, work, etc.

Cheers,

Not me. I'm not interested in pursuing the crusade of illegality. I much prefer the more psychological approach, of trying to understand what motivates people to disregard other people's rights, and why they feel justified in doing so.

> -
> From: nojunkmail_n3cvj@worldlynx.net (Dave Hall)

Hello Toxic Waste:

Your better off without her I would think. I think she would incourage a hobby that you enjoyed.

However women are like bus's, when one leaves, another will show up sooner or later.

Now you can affor to buy a large Linear Amplifier, and massivly high gain antenna system, every thing has a silver linning.

How so? You have not provided any counterpoints (other than the moral equivilency arguement that you still don't seem to grasp the concept of), to justify why we should tolerate rude, arrogant and inconsiderate behavior on the radio.

> so much in fact that you asked me to drop it several times,

You keep getting hung up on the word "moral" in the term "moral equivilency arguement". All you see are ringing church bells, and some preacher holding a bible calling you a sinner. That's not what I've been trying to illustrate.

You try to make the case that since "some person" breaks "some law" that it's ok for you (or other CBers) to be rude and inconsiderate to other CBers. THAT is the equvilency arguement.

> making us profoundly aware of your inability to apply right and wrong to
> anything other than what you consider proper radio technique. So, to
> answer your question, each time you mention behavior considered not in
> agreement with your views, you are indeed bringing up morality, but you
> keep begging me to drop it, yet it is you that seems unable to get
> beyond it.

So now you want to argue the definition of "rude" and "inconsiderate"? Now you're REALLY reaching.

The definition of rude, inconsiderate (and the rest of the adjectives that describe outlaw CBer's attitudes toward the rest of the operators they aren't "buds" with) is pretty much universal. It's not "my" morality at issue here. It's the generally accepted definition that we, as a supposed civilized society, have applied to certain behaviors.

Your attempts to compare what happens on the radio with what happens on this (or any other) USENET group is irrelevant to this discussion, despite you best attempts to divert the discussion from the core

problem.

You can argue legality, and your "right" to ignore a rule, based on some misguided sense of "consciencious objection", but you cannot argue that your behavior is inconsiderate of other people and their rights.

Oh come on! Are you that naive, or are you in "Da Nile?

Riddle me this Batman, how would you maintain or increase the modulator output power to keep pace with an increased carrier level, when the modulation limiter is still holding the modulator for 100% at a 4 watt level? You HAVE to either clip it or adjust it for the new carrier level.

>
> allows the modulator power to increase somewhat beyond that, but there
> is still a max limit, and it also drives the modulator to flatopping or

> Yup, the "S" meters aren't all that accurate. Still doesn't have
> anything to do with your original error. Again.

No but it has everything to do with YOUR error. Had you been closely following this thread (A pattern that is all too familiar for you as of late, as illustrated by you attributing text to me that were quotes from others), you would have known that it originally called into question the practice of tuning up a CB, and whether it was worth doing. DebbieDave claims that his couple of watt improvements were noticable by several "S" units. I countered that this was most likely the result of an overly generous "S" meter. The text about the evils of peaking as it relates to modulation, was a technical illustration as to why it really shouldn't be done, and why it's really not an improvement. If you crave power all that much, it's better to leave the radio alone and buy an amplifier (If you're going to run illegally, at least do it relatively cleanly).

>work 10-80 meters in a mobile installation, or is it designed strickly for
>10/11 meters?

Hi Barry,

I believe it's designed strictly for 10/11-meters. We can just rule 11-meters out right off the bat. However, this unit is legal to operate on 10-meters PROVIDED you purchase it in 10-meter 5 watt CW transmitter form and perform the modification to transform it into an amplifier yourself. You must also be a licensed ARO. I know, the rules are kinda quirky re. this.

>If need be,
>is the modification to cover the entire hf spectrum posted anywhere?

Unsure.

Does anybody (Dick?) know if these are fairly clean amps for use on 10-meters?

>what mine described as *a weird hobby*?

Did she hate the hobby itself or did she hate your obsession with it and where you placed it among the various other priorities that litter your day?

A radio hobby is nice but if you put it above the relationship with her, well, helping her pack her bags was a gentlemanly touch I guess, but be careful you don't roll over on your radios in bed.....can make for an awful backache in the morning. Not to mention that on cold nights you might to warm 'em in the microwave a minute or so.
Same with computer hobbies I guess. Some people put their priority on looking at porn thru their monitors but then spend their nights alone in a nice cold bed. Doesn't make sense to me.

With partners/spouses/significant others/insignificant others, It's not the hobby that's "weird". It's the hobbyist. Now if she actually thought the hobby itself was weird, well, then there's not much hope for the relationship I wouldn't think.

> However, a bad TU will leave you thinking otherwise.

The general term "Performance" means nothing unless you want to get down to specifics. There are more things to "tweak" in a radio than just power output. For example a good alignment job in the RX section would be a worth while exercise. For example crystals age and drift a bit in frequency after being in service for a while so your converted RX passband maybe off a bit compared to the IF filter passband. Some Hams for example send in their expensive rigs regularly for just that reason, an alignment job in the RX section. This is even more of an issue with a SSB rig since the passband is only a few KHz wide to begin with. However getting a few extra watts of power output is a rather worthless exercise. So if you want to talk about performance you need to be more specific.

Heheh reread my previous post, I had mounted Cobra 148 GTL's behind the seat in both trucks the controls where right over my right shoulder. Easy to get to, I had a remote speaker mounted on the upper left side of my head, and for the mic, I had a onger mic cord made, and ran the mic between seat bottom, and seat back, with it hanging on the side of the dash.

So you feel there is that much of a difference in "propagation" between 11m
and 10m that would justify a 11m beacon? You would figure that the beacons
on 10m would be sufficient given the few hundred KHz difference between the
two bands.

Lets look on the bright side Walt, personally I have no trouble in finding a girlfriend, unlike the average British Ham, who takes up the hobby purely because he is incapable of pulling a bit of totty, although it might help if he bought a bar of soap and a toothbrush.

I suppose its fair to say, a British Hams radio is his equivalent of a blow up doll...

Yeuk, dont even bear thinking about ;-))

Have a nice day Walt.

I have forwarded you're threatening e-mail to the Toledo Police Dept,
Ohio Chapter of the FBI. and my local police Dept in my city...

and for the record, I *WILL* be at the toledo hamfest, ready and
waiting for *ANY* Bullshit you clowns might wanna start...

I don't fear anything or ANYBODY!

I saw this in another group and they were the first "people" I thought of while reading it.
Train

You swine. You vulgar little maggot. You worthless bag of filth.

You are a canker. A sore that won't go away. I would rather kiss a slug than be seen with you. You're a putrescent mass, a walking vomit. You are a spineless little worm deserving nothing but the profoundest contempt. You are a jerk, a cad, a weasel. Your life is a monument to stupidity. You are a stench, a revulsion, a big suck on a sour lemon.

You are a bleating foal, a curdled staggering mutant dwarf smeared richly with the effluvia and offal accompanying your alleged birth into this world. An insensate, blinking calf, meaningful to nobody, abandoned by the puke-drooling, giggling beast who sired you and then killed himself in recognition of what he had done. Your daddy was a bastard, your mamma was a whore, and you wouldn't be here if the rubber hadn't tore. I will never get over the embarrassment of belonging to the same species as you. You are a monster, an ogre, a malformation. I barf at the very thought of you.

You have all the appeal of a booger. Lepers avoid you. You are vile, worthless, less than nothing. You are a weed, a fungus, the dregs of this earth. And did I mention you smell?

You snail-skulled little rabbit. Would that a hawk pick you up, drive its beak into your brain, and upon finding it rancid set you loose to fly briefly before spattering the ocean rocks with the frothy pink shame of your ignoble blood.

May you choke on the queasy, convulsing nausea of your own trite, foolish beliefs. You are weary, stale, flat and unprofitable. You are grimy, squalid, nasty and profane. You are foul and disgusting. You're a fool, an ignoramus. Monkeys look down on you. Sheep won't have sex with you--only trash such as yourself.

You are unreservedly pathetic, starved for attention, and lost in a land that reality forgot. And what meaning do you expect your delusionally self-important statements of unknowing, inexperienced opinion to have with us? What fantasy do you hold that you would believe that your tiny-fisted tantrums would have more weight than that of a leprous desert rat, spinning rabidly in a circle, waiting for the bite of the snake?

You are a waste of flesh. You have no rhythm. You are ridiculous and obnoxious. You are the moral equivalent of a leech. You are a living

emptiness, a meaningless void. You are sour and senile. You are a disease, you puerile, one-handed, slack-jawed, drooling, meatslapper. On a good day you're a half-wit. You remind me of drool.

You are deficient in all that lends character. You have the personality of a used condom. You are dank and filthy. You are asinine and benighted. You are the source of all unpleasantness. You spread misery and sorrow wherever you go. You smarmy lagerlout git. You bloody woofter sod. Bugger off, pillock. You grotty wanking oik artless base-court apple-john. You clouted boggish foot-licking twit. You dankish clack-dish plonker. You gormless crook-pated tosser. You churlish boil-brained clotpole ponce. You cockered bum-bailey poofter. You craven dewberry pisshead cockup pratting naff. You gob-kissing gleeking flap-mouthed coxcomb. You dread-bolted fobbing beef-witted clapper-clawed flirt-gill.

You are a fiend and a coward, and you have toe jam. You are degenerate, noxious and depraved. I feel debased just for knowing you exist. I despise everything about you, and I wish you would go away forever.

I cannot believe how incredibly stupid you are. I mean rock-hard stupid. Dehydrated-rock-hard stupid. Stupid, so stupid it goes way beyond the stupid we know into a whole different dimension of stupid. You are trans-stupid stupid. Meta-stupid. Stupid collapsed on itself so far that even the neutrons have collapsed. Stupid gotten so dense that no intellect can escape. Singularity stupid. Blazing hot mid-day sun on Mercury stupid. You emit more stupid in one second than our entire galaxy emits in a year. Quasar stupid. Your your statement makes you a troll.
Nothing in our universe can really be this stupid. Perhaps this is some primordial fragment from the original big bang of stupid. Some pure essence of a stupid so uncontaminated by anything else as to be beyond the laws of physics that we know. I'm sorry. I can't go
on. This is an epiphany of stupid for me

Beg to differ. Polarization is determined by the antenna at the feedpoint
and the dish will maintain it. I do not know if it is still done but one
of the Satcoms ran two transponders in the same freq to get 24 channels
from 12 freqs. You rotated your antenna to select one from the other and
the capture effect of FM did the rest.

No clue but putting in a 300 watt linear after a rig already capable of
50-75 watts is a vast effort for a half-vast result. Particularly on 10
meters

I have seen lots of hams and cbers so eat up with the hobby they
wound up loosing family and friends. Really sad to loose so much
over such and unimportant thing.

I just want to know if this particular amp will operate 10-80 meters as is.
No legalese please.
Class AB-1 , clean audio in / clean out.
A seven pole filter kit could always be added.
300-350 watts certainly will be heard over 100 watts and would not put a severe strain on a stock
mobile electrical system, battery and alternator.

I'm considering picking up the Astron SS-30M (25A continuous/30A
surge) power supply. If the outlet that I'm using for this base setup
is rated at 20 amps on my home's circuit breaker, will I trip the
breaker when I fire-up the power supply? Do I need to go for the
Astron SS-25M, which is 20A continuous and 25A surge?

Thanks for your advice.

Noah

Why is it that there always has to be some smart-arse Brit chime in and say that Yanks really don't speak/write English? We communicate in the same language as you, albiet with variations, but it's still English. Canadian French is different from that spoken in France, but it's still called French. Ditto Mexico and Spain. However, English is supposed to have a different set of rules, according to wankers like you.

The 706 already does 100 watts PEP by the way, and I second your opion about
the need for the amp.

2530. Re: "Peak &Tune" or TUNING UP CB's DOES made a Difference!/Sandbag...

Newsgroup: rec.radio.cb
Date: 2002-02-27 22:45:10 UTC
From: twistedhed@webtv.net
Message-ID: <27426-3C7D6176-59@storefull-2316.public.lawson.webtv.net>
Source record: 116993

What in the world do you mean, TW? We were referrring to the idea that one or two more
watts or a little "swang" does nothing to increase the ERS of one's signal. Dave/Debbie was
trying to trash the known and accepted engineering theory that it actually takes 4X a given
power to make a REAL gain in a received signal--or an upward movement of an S-meter.
Six DB = 1 S-unit--that is, if the S-meter is calibrated. One-half, or 3 DB, is not enough to
detect. Many people think that it works like a car; press the gas half-way down, and you get
a linear response in "perceived" power. It doesn't work that way.

-What I asked of you, was whether you were referring to the peak and tune when you used the term "imaginary." If that isn't the case, my humblest apologies concerning any misunderstanding. Otherwse, my modest personal observations and assessments were addressed as indicated.

Lots of CB shops make their livings based on the "linear response" method. Knowing that the
natural assumption of the public is to believe that any amount of "more" is better, they can more
easily peddle their "peak and tune" jobs.

-I won't argue that. I've heard some pretty wild claims not only from the shacks on the interstate but from some of the locals as well. The banter about power usually gets the discussion going each and every time.

Actually, it is nothing more than a placebo--a sugar pill that makes the customer feel better about his "gittin' out". Truth is, 3-4 more watts and/or more "swang" won't improve anything enough to tell it. OR, it causes harmonics and distortion
because the radio was not designed to be tinkered with to start with.

-Depends on what the peak job was comprised of.

The final point was that "coax length" thing that so many so-called CB "gurus" swear by. Coax
length, except for a restricted and few applications, doesn't matter.

-If that was the final point, I don't see any disagreeing.

And, again, if a "shop" can
make the meter read a certain value with "multiples of 3", or certain jumper lengths, it means he

doesn't have to get out there and prune the antenna, or fiddle with it to get the ACTUAL SWR
of the antenna.

-This is all new to me. I have never been in such a "shop" as you define it, but I guess some exist judging by the sheer number of hammies that voice their dissatisfaction with their various hangups concerning cb on a cb board.

Finally, when one has studied this stuff, worked with this stuff, and, additionally, BUILT hundreds of antennas and reads where somebody makes silly statements about PROVEN RF
applications and practice, it is very hard not to respond in an attempt to correct the mistaken
premises that seemed to live forever--and, yes, mostly on the CB band. Sorry, but that is the
way it is.

-Gotta disagree with ya' there. I see more lies and bullshit here than I do listening to the cb. Once again, your proximity to one of the largest trucking hubs in the east plays a big part of what is happeing on your cb.

  There was no intent in my post against CBers, just an attempt, tho, perhaps, ill-spoken, to correct a couple myths. I AM, tho, very reluctant to be taken for a ride, and that is what happens to people that don't know very much about radio--or cars, for that matter.

-Or the cb myths and dangers and hype and bullshit. Yea, I can dig your passion, man.

When I see someone saying that, "Them 2 watts CAN be seen on an S-meter, I know it cuz I
seen it", and I know it is imaginary, then I'm a-gonna say so!
Jerry

-And it's a good thing the lowly, verminous cbers like me that actually admit to enjoying all cb has to offer have people like you to let us know how not to be ripped off or taken for a ride.

No. "Gail" means "joy" from the Hebrew dialect.
A "gale" is a wind above 32 mph.

I think my present woman thinks its quite interesting. she likes to listen in on my receiver occasionally and does find the 2m conversations rather interesting though Im not sure its for the right reasons!!. I think she sees herself as a bit of an armchair amateur psychologist!!.

Anyway,when she first saw my erection she was gobsmakced and thought it most impressive. Even now she is rather in awe of it and it has given both of us a great deal of pleasure..

I, too, find myself in the "ex" catagory. Like your ex, my wife always referred to my radios as
"all those 'dumb' radios".....most particularly the ones in the car. She even made me put my
radio station in the closet! I built a desk that would just fit in the closet in our den, and allow the louvered doors to close. This way, when we had company, she could close the doors and
hide those "awful" radios! LOL! Seriously, it worked out pretty well because, with the doors
closed, you wouldn't even know I had a radio station. When she borrowed my car, she would
make me take the antennas off.

She was only half serious about the radios, tho, I found out later. No, she didn't like them at all, but she tolerated them, and actually enjoyed putting them down. It got better during the time I was working out of town. Every Friday night, I would start home and get on the HF
mobile and talk to my friends, or check into various nets. I arrived home one night and she had
forgotten to turn it off. I went into the den, and saw the HF was on, and I wondered out loud
why. She looked like a Cheshire cat caught in the "act" of eating the pet bird!! Even though she razzed me about how "useless" my radios were, she had been listening to me on the drive
home from Atlanta, GA every week! It was her way to see that I was OK, and not in a wreck;
as long as I was talking on the radio, she knew all was well. It was my turn to razz HER! LOL!

>although not my cup of tea, I was expected to accept this.

OK, I'll bite. Why didn't you just head on in to the radio(s) when she was out fashion shopping?

I might be more obsessed with the radios if the police scanners were better, but the conversations aren't nearly as enjoyable here as they were up in rural Wisconsin. That was Andy Taylor / Barney Fife Land, and people kept their scanners on all day every day because no TV sitcom could compare for humor.

And the stuff on the CB around here seems to be pretty much "honey pick up a loaf of bread on your way home from work" stuff or guy talk on sports. Hard to get obsessed 'bout that. And nobody ever wants to hear about my really neat Martha Stewart crepes recipe.

Maggie

2542. Re: "Peak&Tune" or TUNING UP CB's DOES made a Difference!/Sandbag...

Newsgroup: rec.radio.cb
Date: 2002-02-28 01:38:32 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <4Yff8.79448$2v1.2184165@e3500-atl1.usenetserver.com>
Source record: 116804

There is nothing wrong with enjoying CB. I never said that. You have become extremely touchy lately????? The point I was making was that many people "enjoy" lots of activities
without knowing a lot about it. Me, for example, and computers. I enjoy surfin' the net, but
my computer has slowed down to crawl lately. I know something is wrong, but I don't know
what to do about it. The majority of CBers enjoy CB, but they aren't necessarily knowledgable
about it or know how it works. Lots of "hack" shops make a living by preying on people that
just don't know. It doesn't make those people stupid, they just aren't versed in the subject. I can fly a light airplane because I took the training years ago. A machinist can make a precision
metal part on a lathe. But, unless we have some background in radio, neither of us will know about electronics and transmission theory.

THAT was what I was trying to say; that those (not all) shops make money on the fact that people just don't know. Makes it easy to convince customers that squeezing one or two more
watts, or causing the radio to "swing" more on a meter is necessarily going to make their radio
the loudest station going. People WANT to believe that fantastic results can be had with a "little" peak and tune job. So, the shops oblige. Often, the result is a radio that is now outside of its technical specs and sounds horrible.

Nuff said.

Jerry
Twistedhed <twistedhed@webtv.net> wrote in message news:27426-3C7D6176-59@storefull-2316.public.lawson.webtv.net...

What in the world do you mean, TW? We were referrring to the idea that one or two more
watts or a little "swang" does nothing to increase the ERS of one's signal. Dave/Debbie was
trying to trash the known and accepted engineering theory that it actually takes 4X a given
power to make a REAL gain in a received signal--or an upward movement of an S-meter.
Six DB = 1 S-unit--that is, if the S-meter is calibrated. One-half, or 3 DB, is not enough to
detect. Many people think that it works like a car; press the gas half-way down, and you get

a linear response in "perceived" power. It doesn't work that way.

-What I asked of you, was whether you were referring to the peak and tune when you used the term "imaginary." If that isn't the case, my humblest apologies concerning any misunderstanding. Otherwse, my modest personal observations and assessments were addressed as indicated.

Lots of CB shops make their livings based on the "linear response" method. Knowing that the
natural assumption of the public is to believe that any amount of "more" is better, they can more
easily peddle their "peak and tune" jobs.

-I won't argue that. I've heard some pretty wild claims not only from the shacks on the interstate but from some of the locals as well. The banter about power usually gets the discussion going each and every time.

Actually, it is nothing more than a placebo--a sugar pill that makes the customer feel better about his "gittin' out". Truth is, 3-4 more watts and/or more "swang" won't improve anything enough to tell it. OR, it causes harmonics and distortion
because the radio was not designed to be tinkered with to start with.

-Depends on what the peak job was comprised of.

The final point was that "coax length" thing that so many so-called CB "gurus" swear by. Coax
length, except for a restricted and few applications, doesn't matter.

-If that was the final point, I don't see any disagreeing.

And, again, if a "shop" can
make the meter read a certain value with "multiples of 3", or certain jumper lengths, it means he
doesn't have to get out there and prune the antenna, or fiddle with it to get the ACTUAL SWR
of the antenna.

-This is all new to me. I have never been in such a "shop" as you define it, but I guess some exist judging by the sheer number of hammies that voice their dissatisfaction with their various hangups concerning cb on a cb board.

Finally, when one has studied this stuff, worked with this stuff, and, additionally, BUILT hundreds of antennas and reads where somebody makes silly statements about PROVEN RF
applications and practice, it is very hard not to respond in an attempt to correct the mistaken
premises that seemed to live forever--and, yes, mostly on the CB band. Sorry, but that is the
way it is.

-Gotta disagree with ya' there. I see more lies and bullshit here than I do listening to the cb. Once again, your proximity to one of the largest trucking hubs in the east plays a big part of what is happeing on your cb.

There was no intent in my post against CBers, just an attempt, tho, perhaps, ill-spoken, to correct a couple myths. I AM, tho, very reluctant to be taken for a ride, and that is what happens to people that don't know very much about radio--or cars, for that matter.

-Or the cb myths and dangers and hype and bullshit. Yea, I can dig your passion, man.

When I see someone saying that, "Them 2 watts CAN be seen on an S-meter, I know it cuz I
seen it", and I know it is imaginary, then I'm a-gonna say so!
Jerry

-And it's a good thing the lowly, verminous cbers like me that actually admit to enjoying all cb has to offer have people like you to let us know how not to be ripped off or taken for a ride.

It isn't all that good or all that different. A goodly number of CBs use the 'modulate the driver' technique today. And Sparky is correct, some of the phase relationships are wierd and for any number of good reasons, adjustment is fairly critical but that is pretty normal for broadcast AM.

The local 50 kw loudenboomer got a 92% efficient switcher this summer. The tech staff went nuts hunting a funny noise until someone realized that for the first time in 40 years the furnace had come on.

The underlying problem that this approach was designed to cure is that transformer modulation requires a final that behaves in a 'square law' fashion, ie doubling plate voltage also doubles plate current. Triodes typically do but tetrodes typically do not and also react pissily when the screen voltage exceeds the plate voltage, typically by incinerating the screen. So it is pretty common practice to feed the screen thru a resistor or voltage divider from the plate and modulate them both. Most tetrodes will behave pretty close to square law if done that way with proper values. For those that do not and for those not wishing to buy a pretty cute and expensive transformer, methods such as the one you describe were developed.

If you want a design exercise, look up a Gooney box with the Heising system and redesign it to get 100% modulation via fiddling with the driver. Can be done but is really not worth the effort because you do have to remove the self-biasing resistors off the 2E26 and supply bias which introduces stability problems of their own and you do lose efficiency in the process. In the broadcast biz, it just means the furnace stays off but in an amateur application it sucks swampwater thru a long thin tube. Like a lot of things in life, the real issue is what 100% clean modulation is worth to you.

Good luck finding it but I suspect you will be a bit disappointed.

Dick NBK

I knew (not in the biblical sense) a lot of CB grass widows/widowers who monitored their partners transmissions, not to see if they were OK, but to ensure they were not "playing away from home".
My missus and I came to an agreement - I kept my face out of her bingo activities, and she kept her face out of my CB activities - worked for us.

2553. SWR: does it matter if you're only listening?

Newsgroup: rec.radio.cb
Date: 2002-02-28 04:10:58 UTC
From: asdfasdf@aeaerg.org
Message-ID: <kabr7u84dgmmnom8fps06f92n66j2usnf3@4ax.com>
Source record: 116815

Having a high SWR (3.0 : 1) is only cause for concern if you're transmitting, right?

I'm currently attempting to use a mobile antenna on a magnet mount with my clunky old base station. I guess it's not grounded right...

Any recommendations on an INDOOR base antenna?

>

1. standard dipole, about 108" per leg but will probably take some cutting down.

2. folded dipole out of 300 ohm ribbon from Walmart. Same dimensions, better match.

3. 36 foot loop secured with paper clips to crown molding and baseboard and preferably not across a doorway. Feed at corner. Speaker wire is admirable.

No baluns in any case. You can tell I am a Junkyard Wars fan. Your magmount does require a fairly good ground plane approximating a car roof. Hospital bedpans only work on 2 meters.

Hi
i have a beautiful Bird 43 with the peak reading kit.
2 slugs 50 watt , 250 watt both 50-125 mhz
Also have the case brown in color for the meter that will hold up to 6
slugs.
275.00 plus shipping

--

NI4L CUSTOM RESONANT DIPOLE
LEGAL LIMIT ++ CUSTOM MADE CENTER FED DIPOLE
Made with the same components used by our military forces today
Custom made to YOUR FREQUENCY of operation
Let me take the hassle out of making a RESONANT DIPOLE for you.
Click here for more info... <http://www.angelfire.com/nb/ni4l/>

Peter Finch <pfinch@mindspring.com> wrote:
> Nevermind the fact that a dish is circularly polarized and most CB activity
> is vertically polarized - strike 3dB off your gain before you even start!

Not necessarily true. Most dishes do not have circular polarization. The probe is usually a simple dipole - if horizontal and vertical polarization are desired, it can be provided in several ways, depending on whether both polarizations are desired at the same time or not.

Wait and see sissy. That threat you made has some
people pretty riled up.
You might just taste some sorrow if you make it to
Toledo fest.
We all know what an illegal fuck face you are Chuckie.
Wait and see. Yer time is coming. Asshole.

Well, you'd have to ask her next time she's on one of the IRLP nodes :)

Though she does occasionally get a bit annoyed when I look at any metal object as a potential antenna...I'm still trying to figure out dimensions for 2m/70cm patio furniture so I can get something going outside our apartment. I'm seriously considering tracking down a plastic lamp-looking thing so I can disguise a copper J-pole as an ugly bit of decoration.

FWIW, most of the hams I know who have this sort of problem find that getting rid of the woman is quite a bit more productive than getting rid of the radios. Women who feel that sort of competition from inanimate object generally have other issues that you don't want to have to deal with.

DON'T MESS WITH GRANNY!

A true story...

An elderly lady did her shopping and upon return found 4 males in her car.

She dropped her shopping bags and drew her handgun, proceeding to scream at them at the top of her voice that she knows how to use it and that she will if required.... so get out of the car.

The 4 men didn't wait around for a second invitation but got out and ran like mad, where upon the lady proceeded to load her shopping bags into the back of the car and got into the drivers seat.

Small problem, her key wouldn't fit the ignition. Her car was identical and parked four or five spaces further down.
One slip up - if her key wouldn't fit how did she drive to the station???

She loaded her bags into her car and drove to the police station.

The sergeant that she told the story to nearly tore himself in two with laughter and pointed to the other end of the counter where 4 pale white males were reporting a car-jacking by a mad, elderly, white woman......no charges were filed.

You sir are quite welcome and I must also say that I appreciate all
the jokes over the years as well. This group has become infested with
the voobie followers and has made it unpleasant for us trying to learn
and share info with some of you original guys on this group. I know
there is a place where you old heads hang out and share ideas like you
used to on this group, Is it possible for me to find out where that
is??? You can answer via email if you like. Take care and keep blowing
smoke on channel 6.

twisted has said on several occasions that he did not write it and it came at a time when the group was flooded with forges in everybodys name. it should be up to leland to verify where it came from since he loves to quote it as "being from twisted" even though he provides no proof that it is. why doesnt leland quote the entire post including the headers? instead he edits it for his own gain. anyways this is all a mute point because we all know itrs a fake message.

yes a nocoder with zero hf experience would think this because it almost makes sense even though its far from true. have a listen some evening leland on 10 meters until it finally closes at night then tune on down to 11 and hear how the guys will still be going for a couple more hours every time. its partly to due with the MUF getting a little lower and partly due to the hams not willing to work the weak signal stations on hf like we cb'ers must due since we have no lower band to qsy off to. this beacon will be using qrp power from the middle of the pacific ocean. maybe you yourself can even hear it. after all it will not be illegal to swl it. i think its a great idea.

>
>So you feel there is that much of a difference in "propagation" between 11m

2592. Will a Texas Star 350HDV operate 10-80 meters???

Newsgroup: rec.radio.cb
Date: 2002-02-28 14:36:11 UTC
From: Barry <luminosity@madriver.com>
Message-ID: <3C7E4057.13A878BC@madriver.com>
Source record: 116854

Can anyone familiar with the older style Texas Star High Drive 350 with the variable power knob tell me if
it will
work 10-80 meters in a mobile installation, or is it designed strickly for 10/11 meters? If need be,
is the modification to cover the entire hf spectrum posted anywhere? I'm running an Icom 706 and a BB3
screwdriver type
antenna. - Thanks in advance / Barry Vermont

Why is it that there always has to be some smart-arse Brit chime in and
say that Yanks really don't speak/write English? We communicate in the
same language as you, albiet with variations, but it's still English.
Canadian French is different from that spoken in France, but it's still
called French. Ditto Mexico and Spain. However, English is supposed to
have a different set of rules, according to wankers like you.
-
In all fairness, we really don't speak true English, we speak an
Ameicanized, hybridized, bastardized version of English, but it sure as
hell ain't English..

I kinda like baluns. I betcha if he uses a decent choke balun, he can
even transmit without causing any significant TVI/RFI problems.
Doesn't have to be commercial...just a few loops of coax bundled
together and he'll have a cheap choke balun. (At 12 watts, I don't
think the commercial ferrite core variety is really necessary.)

Funny that you should mention magmount, bedpan, and 2m. I visit a
local ARO who is, for all intents and purposes, blind and bedridden.
He is in a Geriatric care facility and has a Radio Shack magmount on
the radiator (No pun intended.) next to his bed. He actually does a
good job from his third floor room and is full quieting on one of the
local repeaters. He is the sole reason I hop on 2m. I was actually
thinking about helping him put up an indoor folded dipole for 10m and
giving him one of my spare 10m rigs but I'm not sure how 35 watts of
HF rf will affect medical equipment in close proximity. He's using a
HTX-202 now and doesn't appear to be doing any "noticeable" damage.
Your thoughts sir?

How often you get to the Peach state? Keydown this weekend in Georgia. If you're interested, maybe you can sneak down and say hello to all the fine hammies that will be there (there were quite a few last year). This year an odd twist came about....the main hotel (a few vacancies left) is even offering an ARRL discount (10% off rack). How's that for ironic?

Um...

Why are you whining to us about it? If the below isn't forged, made up, or whatever, exactly what do you expect this NG to do about it? That'd be like me complaining to the mayor because my cousin's brother's sister's dog's former owner's mother's brother's daughter doesn't have a job.

We'll never really know who sent what to whom anyway, ("But there's headers!", you whined? Well, those too can be forged) so why are you sending this to the NG? Really, my four year old doesn't whine that much!

I am wanting to install one on my motorcycle. I have seen one on a motorcycle that's a Midland #75-805. It seems to have all the features I would be wanting with 40 channels, weather and FM receiving. This has been discontinued. Does anyone know if it was a quality or sales issue?
I have seen a lot of Cobras on the net, but were refurbished. This tends to lead me away from those. Would this be wise? Thanks for your responses.

You would be far better off to install a regular cb on your bike, it
would be alot less hassle, and better performance. Good luck in
whatever decision you make.

Good question. And if you ask permission it is almost sure to be denied.
Actually the HF is probably better for surrounding pacemakers etc than is
two meters. Try it and see is about the best I can do.

One of my ex Freebanders was in the hospital and we did indeed use a
bedpan for the groundplane.

Tim you still can't read can you. I don't care what length of time a particular frequency is "open" on two so closely spaced bands. Part of the study of propagation effects is what paths are open and under what conditions. You seem to want to dicker over the few hundred HKz between 11m and 10m, more like 27.405 MHz to 28.000 MHz. Heck there is more bandwidth than that just in the 10m band alone, however you don't find much interest in spotting a beacon every 100Khz. It's not necessary. A beacon at 28.000 MHz will give you as much useful information about propagation on 10m as it would for 11m.

Dear Chuck,
Every time you come back from one of your "sabbaticals" you, all most, immediately start up this shit. Why is that?
Hell, even if you don't start it, someone says something to get you riled and then it all begins again. Threats, counter-threats, real or imagined, follow you around like they're your shadow.
Thicken up that thin skin man. Take the chip off your shoulder, sit down and have a good time. Why all the drama?
Relax. :-)

I forget the URL, but there is a web page where you can generate rants like this on almost any topic. You just plug in the person's name that you want to goof on and pick a general topic and out comes a couple of pages of rant. Wish I could remember the URL. :-)

Why not try one of those little-bity Uniden 510's? Very small over-all and a
relly nice little performer. I think the 530 comes with weather but is about
the size of a 25. The 510 is the size of a Cobra 19.

Heheh that could be fun to have, like whenever you get a bit cheesed
at the boss. Just insert his/her name, print results, and annonamously
post it in employee bulletin board heheheh.

Like when I made up a memo to the boss "Your Proctologist called, the
found your head"

heheh

> Indo-European chart sometime, if you know what one of those are.

For all who do not recognize ENGLISH as the world's standard:

OVERHEARD AT THE FRANKFORT RADIO TOWER ON THE AIRCRAFT FREQ:

1. Plane trying to land asking for instructions in German was
given the reply, "You must use English to recieve instructions
from this control tower!

The plane's pilot asked why since he was in a German Plane, in
German airspace and coming from and land on German soil, why
must we use ENGLISH?

Before the control tower could answer, a decidely British and
American Accent both chimed in, "Because we won the war!"

RULE BRITANNIA, PAX AMERICANA and the highest standards of living
in world are to be found in ENGLISH speaking countries!

In America, we have a ROYAL SOCIETY CLUB, in Canada we have the
best hockey team and in the UK country music has a cult following,
why you ask, because of the ENGLISH LANGUAGE!

Martin N5PZJ

To stay on thread, yes my spouse tolerates my hobby and I tolerate her
hobby, ouch where did you find those knitting needles again?

I assume you are referring to the erection in your back yard? The one
with the 8 ele yagi on the top.
73 de G3NYY

--

An big element isn;t needed if your technique is correct and polished. A
slight wiggle of the ears within the proper reception area and a nonstop
mouth is all that's needed. There isn't a woman in the world that would
choose a giant beam type of guy over the small, barefoot, mouthy
connoisseur of proper window openings.
Ever see one of them really ugly dudes with a really hot looking chick
and wonder how in the hell that happened? It's because we got 'em
figured out. That carpet growing on our back means nothing when the
propagational waves are interpreted correctly and responded to in kind.

I always wondered what that "exciter" in my old radio was for.

Thanks...

Jeff

Uniden HR2510 with external S-meter Mod

Best offer or trade for Galaxy Mobile,depends on which model.

The external s-meter is kinda neat on this rig,I'll include and external housed s-meter
(lighted) ,also have BRAND NEW 2510 face plate I'll let go with it for the right
price or trade.Thanks,Tom

2625. FS: hr 2510 $110 shipped

From: JAMES HAMPTON <j.r.hampton@worldnet.att.net>
Message-ID: <zexf8.4823$gK2.373611@bgtnsc04-news.ops.worldnet.att.net>
Source record: 116887

I've seen bikes at work with regular CBs installed in them. The problem with the handhelds is the efficiency of the tiny antenna is very low. You'll be lucky to get a mile out of it (frs would likely do better). Try and find someone who has installed a regular CB with a decent antenna on his bike and take it from there.

73 from Rochester, NY - and best of luck with the bike
Jim

Source record: 116888

Barry,

It looks like c10 and c32 on the schematic is used to limit its
frequency response. So to get the amp to run 10-80 you may have to
change the values of these caps. If you zoom in on the parts table
they give a range of values. Since the amp uses broadband transformers
to match the transistors to 50 ohms. The amp will work 10-80.

http://www.texasstar.com/350HDVschematic.gif

Are you planning on using the amp with the 706? If so, you are not
going to gain much. This amp using two 2sc2879's. The transistors are
rated at 100 watts pep each. You are only going to gain 3dB and
probably less over the 706.

GW

I would also remind the Brits that seventy percent of English, according to
my high school French teacher, is actually mispronounced French, thanks to
William the Conqueror and the Normans. So all of you Brits had better quit
butchering the French language!

Been to Frankfurt Before?

The German controllers at Frankfurt Airport were a short tempered lot, they not only expected you to know your parking location but how to get there without any assistance from them. So it was with some amusement that we (a Pan Am 747) listened to the following exchange between Frankfurt ground and a British Airways 747 (Speedbird)

Speedbird: "Good morning Frankfurt, Speedbird 206 clear of the active."

Ground: "Guten morgan, taxi to your gate.

The BA 747 pulls onto the main taxiway and stops.

Ground: "Speedbird, do you not know where you are going?!"

Speedbird: "Standby ground, I'm looking up the gate location now.

Ground (with typical German patience): "Speedbird, have you never been to Frankfurt before?!"

Speedbird (coolly): "Yes, in 1944, but I didn't stop."

ROTFL!

I can do no better than to refer you, once again, to the excellent
glossary of "English as she is spoke", which is to be found at
http://www.youngie.com/terms.htm

It is of especial value to Americans, as it highlights many important
differences between the two languages!

P.S. I had faggots and peas for lunch on Monday!
;-)

2641. Re: Why Keydowns Suck (Editorial)

Newsgroup: rec.radio.cb
Date: 2002-02-28 22:46:29 UTC
From: twistedhed@webtv.net
Message-ID: <2232-3C7EB345-81@storefull-2317.public.lawson.webtv.net>
Source record: 116899

Where am I self contradicting anything? It's really quite simple (even for you). Either you support rude, disruptive, disrespectful, and inconsiderate behavior, or you don't. So which is it?
Dave
"Sandbagger"

-Well, let's see. The morality ssue that you brought up so many times seems to have struck a nerve when applied to your own logic and situations,

How so?

-You have begun to be insultive in your posts, indicative of anger and nothing to do with your many topics touched upon.

You have not provided any counterpoints (other than the moral equivilency arguement that you still don't seem to grasp the concept of), to justify why we should tolerate rude, arrogant and inconsiderate behavior on the radio.

-Are you alright? Once again, you brought up the moral aspect, not me. The problem began when you were asked to apply your own logic. Nowhere will you find me alluding to anything of the sort that you are trying to imlpy I condone, such as rude behavior on the air.

so much in fact that you asked me to drop it several times,

You keep getting hung up on the word "moral"

-You keep bringing it into the conversation when it has no place. If it did, you would have no problem applying it across the board, not just as you see fit.

in the term "moral equivilency arguement". All you see are ringing church bells, and some preacher holding a bible calling you a sinner.

-He isn't calling me a sinner, it is clear you are having a problem following the posts in the thread and who said what. Im a God fearing man, always have been, and I give him his due, which is one of the reasons I am so blessed in all aspects of my life.

That's not what I've been trying to illustrate.
You try to make the case that since "some person" breaks "some law" that it's ok for you (or other CBers) to be rude and inconsiderate to other CBers.

-Not true. You made the analogy when you were asked to apply your own moral logic.I never claimed it was "ok" to do what you suggest. This is

your way of avoiding the question, again. Insults not working the way you planned so now you are reduced to lies? A very familiar theme, but a repeated and constant failure, nonetheless.

THAT is the equvilency arguement.

-Says you.

making us profoundly aware of your inability to apply right and wrong to anything other than what you consider proper radio technique. So, to answer your question, each time you mention behavior considered not in agreement with your views, you are indeed bringing up morality, but you keep begging me to drop it, yet it is you that seems unable to get beyond it.

So now you want to argue the definition of "rude" and "inconsiderate"? Now you're REALLY reaching.

-Not at all. Read it again.

The definition of rude, inconsiderate (and the rest of the adjectives that describe outlaw CBer's attitudes toward the rest of the operators they aren't "buds" with) is pretty much universal.
-I',m certain among the company you keep, it may very well be, "universal", but you professing to speak for the people around the world is comical so and far removed from the truth that it is lost upon you. I'd rather debate your flawed interpretations of rude and inconsiderate actions and whatever else you deem it, when applied to usenet, an apparent stumbling block in your world and a subject you are unable to draw similarities from.

It's not "my" morality at issue here. It's the generally accepted definition that we, as a supposed civilized society, have applied to certain behaviors.
Your attempts to compare

-It's not an attempt to "compare", no matter how many times you parrot it. It was a simple question that not only has you reeling, but it managed to evoke many insultives from you. Once that occurred, anything you were trying to convey lost all it's merit. THAT, is something that is generally accepted by our society, and since you are so fond of citing what society believes, I'd figured it would be a great time to remind you that society generally holds true that when one is reduced to hurling repeated insults, he has lost his debate.

what happens on the radio with what happens on this (or any other) USENET group is irrelevant to this discussion, despite you best attempts to divert the discussion from the core problem.

-Simply because you fail to comprehend relevance to your own logic when applied evenly does not make it irrelevant. You have managed to manipulate your "core" problem to to one of your own personal indiscretions of insults, and now lies. You must be very proud to have

been accepted and referred to by name by our contingency of trolls so eagerly and quickly.

You can argue legality, and your "right" to ignore a rule, based on some misguided sense of "consciencious objection",

-Conscientious objection applies only to the military. Once again, you're welcome.
Certain rules are outdated and ignored intentionally.

but you cannot argue that your behavior is inconsiderate of other people and their rights.
Dave
"Sandbagger"

-I don't...people like you do and I try to set them straight and see things more clearly. This is usually met with insults from the troll gallery.

If you got rid of me, you'd still have Sparky, Leland, George, Doug,
Dave Hall, and many others to contend with. -A
-
Not me. I'm not interested in pursuing the crusade of illegality.

-I can see why you would try to distance yourself from the remark, but
let's face it, insultive postings are more inline with their way of
thinking than with the majority of regs who post. They consider you one
of their own.

I much prefer the more psychological approach, of trying to understand
what motivates people to disregard other people's rights, and why they
feel justified in doing so.
-
From: nojunkmail_n3cvj@worldlynx.net (Dave Hall)
You really are on drugs aren't you?
A legitimate question in the context of many of your answers.
-
-No, it isn't. You really fit in well with your new friends,
Dave..worrying about our personal lives so much. Only the self-described
AKC'ers have a problem following my train of thought.

From: nojunkmail_n3cvj@worldlynx.net (Dave Hall)
It's really quite simple (even for you).
Heavy drug use can diminish a person's comprehensive ability.
--
-I take your word for it, Dave.

-Don't worry Dave, your secret is safe with us. Welcome to the litter,
and do try not to let your emotions get the better of you as to where
you may possibly be reduced to insults, like those that welcome you with
open paws.

Emotions are irrelevant.

-Then stop letting them dictate what you post.

No insult intented.

-Simply another issue for you to work on, I am sure, is to actually convey what you mean more effectively.

I am really seriously curious if you're on something.

-And I am really curious to seethe astonishing and striking similarities between you and your newfound pals who welcome you so endearingly.

Judging by the way you've been jumping around topic points, attempting to make comparisons that don't exist, and accusing me of not being able to follow your "twisted" ramblings (no wonder!), really makes me wonder. You come off like a classic doper.
Dave
"Sandbagger"
-
All this, simply from applying your logic to your pals behavior. Tsk Tsk, hypocrisy rears it's ugly head once again.

Everyone knows amps on 11 meters are illegal. So what? So we have the holier-than-thou schmoes out there trying to convince us that we ought to change our ways. Look, I,ll make it real simple 4 u self appointed cops and monitors or whatever the hell u refer to yourselves as. We know the risks, if we take the chance, most of us are ready to deal with the consequences should the heat come down. I have respect for MOST hams, but I achieve the same results at a fraction of the cost. If I bleed a neighbor, all they have to do is knock on my door. We will work it out. I have been in the same area for quite some years and have no problems. If I am not hurting anyone, why the hell should you care WHAT I do? The bottom line is you shouldn't. Get a life. You guys that bitch about us freebanders and "peaked" radios have way too much time on your hands. I don't need to run anymore than 30 watts where I am located and I talk all over the world......yes.. on the freeband. Nothng pleases me more than one of you cb rambos to come in to my conversation and start preaching about rules. God, I love to squash you suckers.

Twistedhed wrote:
You can't get more power out of an audio amp than it's maximum output.

-True.

The modulation limiter only limits the amount of audio to what it takes to make 100% based on a 4 watt carrier. removing the modulation limiter _Here is where you err. No one mentioned cutting or removing the limiter except you. Get it together, Dave.

Oh come on! Are you that naive, or are you in "Da Nile?
Riddle me this Batman,

-Batman? Well, considering you have indeed went the way of the cartoon character, this new term you're addressing me with now doesn't surprise me.

how would you maintain or increase the modulator output power to keep pace with an increased carrier level, when the modulation limiter is still holding the modulator for 100% at a 4 watt level? You HAVE to either clip it or adjust it for the new carrier level.

-A huge difference between clipping it and adjusting it, Dave.

allows the modulator power to increase somewhat beyond that, but there is still a max limit, and it also drives the modulator to flatopping or squarewave distortion. Something you would see if you had a monitor scope. If you have a 6 watt carrier and you have 3 watts max of audio, you will barely make 100% moduation, and it will be a distorted squarewave. Something that will not sound as clean, and will also splatter adjacent channels.

-(Yawn) Feel better?

If the truth bores you, your revel much about your attitude.

Frankly I'm shocked that anyone would consider such a tuneup to be an "improvement".

-No one did. Remember YOU mentioned removing the limiter.

Something that everyone it seems, except you, understands as a given
when we talk about your typical "CB tune up"
This is not "hambo theory" this is reality. Peaking a radio for one or 2
more watts will be virtually unnoticable, at least until you tell
someone, and then they might say "Oh yea, wow, you sound great now!".
I'm
talking about
LOOKING at the receive S unit meter, doing the tuning, and the receiver
reporting AN INCREASE.

-No, you weren't, either. You were talking about removing the mod
limiter, something that wasn't mentioned till you mentioned it. Wanna
see it again?

No, you're now answering a piece of text that I didn't write. You're now
arguing with DebbieDave.
YOU can't explain it.

-Nope. YOU can't explain it, which is why you are reaching for such far
corners and inserting dialogue that never existed.

Non sequitor.

-Not at all. It's your refusal to acknowledge, is all.

We're talking base stations for the most part, where people actually SIT
and make notes of where a signal was before, and after. WHY then did it
go up?

I told you, an overly generous "S" meter. Most CB radios have meters
that are very generous at the low end. I've had radios on the bench that
when I jumped 10db on the signal generator, they would go from "S1" to
"S5", when slightly over "S3" would've been about right. Once you get to
the "S7" to "S9" area, it gets better. Some radios need a bolt of
lightning to advance past 10 db over S9.
The bottom line is that the "S" meter was never designed to be an
accurate measurement device. It was meant as a relative indicator. Dave
"Sandbagger"
-
Yup, the "S" meters aren't all that accurate. Still doesn't have
anything to do with your original error. Again.

No but it has everything to do with YOUR error. Had you been closely
following this thread (A pattern that is all too familiar for you as of
late, as illustrated by you attributing text to me that were quotes from
others),

-Such as? What do you feel I misquoted?
I mean, if you want to jump on me for a misquote, feel free..I could
have done the same but chose not to because it wasn't relevant to the
debate, an honest mistake...so carry on and if you feel it so pertinent,
I'll repeat the part where you failed to follow the thread closely and

misattributed a quote.

you would have known that it originally called into question the practice of tuning up a CB, and whether it was worth doing. DebbieDave claims that his couple of watt improvements were noticable by several "S" units. I countered that this was most likely the result of an overly generous "S" meter. The text about the evils of peaking as it relates to modulation, was a technical illustration as to why it really shouldn't be done, and why it's really not an improvement. If you crave power all that much, it's better to leave the radio alone and buy an amplifier (If you're going to run illegally, at least do it relatively cleanly).
Dave
"Sandbagger"
-
-And I claimed the "S" meters weren't that accurate anyways, but I do find the above statement a surprise coming from you. What type amplifier would you recommend?

2645. TX TRBL

Jerry,
There's really no way to check SWR without a meter. Same
for checking for transmitted signal, you'd need a meter of some
kind to do either.
'Doc

asdfasdf,
No, SWR doesn't make much difference if your just listening.
Unscrew the 'cap' of the PL-259, pull the thing out slightly,
your
reception will improve quite a bit. Otherwise, set the mag-mount
on top of the refrigerater.

I'm going by what the data sheets said. At 12.5 vdc output is 100w pep
and IMD is -24 dBc. Looking at the PO Vs PI graph 100 watts PEP looks
to be about the 1dB compression point (P1dB). To go beyond that the
transistor is being driven into the non-linearity range.

2654. WTB: Faceplate for Scanner

Newsgroup: rec.radio.cb
Date: 2002-03-01 02:42:36 UTC
From: klarrg@aol.com
Message-ID: <20020228214236.07473.00000893@mb-ce.aol.com>
Source record: 116916

Want to buy a used but in VERY good to EXCELLENT condition faceplate assembly for an older PRO-48 crystal scanner by RadShack.Will also consider one from a PRO-47 (will work but PREFER the 48 one.)
Will also consider buying entire NON-WORKING PRO-48 with good to A-1 cosmetics if you have one that's broken.
Please Email me directly with what you have and price in first Email. ALL replies answered.
Many Thanks for any help U can provide !

I heard something similar except in reverse.

Seems there was an American airline pilot who had just landed at large
airport outside Berlin.
He was a bit confused as to how to taxi to the ramp and asked for directions
at least 3 times,
always politely. On the 3rd request for directions, a rather terse and
thickly accented voice
answered and curtly repeated the instructions ending with a very
smart-alecky, "Hazz de
Americaner not been to Ber-leen before?" The quite senior Captain paused
and then replied,
Er, affirmative.....but it was in 1945--and we, uh, didn't stop!"

Where I am from "razz" means to tease, so I teased her about speaking so unkindly about my
radios, declaring how worthless they were, and then using the HF to keep track of me.
So, it had a "use"--even to her!!

> Now to fiqure out the correct values of the replacement capacitors.
> Only 3 db gain when doubling the power output? - I'll take it.
>

With all due respect Barry, you are in way over your head.

1. Broadband does not mean DC to light in any case. The cores of the matching transformers must respond to the freqs in question, stray capacitances and inductances figure into the formula. Without knowing what they did, it is absolutely impossible to to say with any accuracy what it would do with or without the capacitors. Coming out of CB it is fair to say it was cheap, half-assed or both.

A transformer has to store a complete cycle so one doing it on 3MHz is a bit larger than one doing it at 30 MHz. Again, the odds of their transformer being equal to the task is slim and none. Even American 60 Hz transformers and motors get a bit warm on the European 50 Hz and you don't even want to know what a 25 Hz xfmr looks like. There was a reason WW2 aircraft used 400 Hz AC, Weight, man, Weight. What do you think the odds might be that these guys used one big enough?

While a screwdriver will resonate admirably, just what its input impedence may be is known only but to God without a lot of work. What makes you think a transformer designed for the ragged edge on 27 MHz and a 50 ohm load will do on 14 with a 20 ohm load. If you said puke you win one silver dollar.

2. You seemed to express some surprise that doubling power is 3 decibels which tends to make me believe you have no concept of logrithmic relationships. If you can't get 10 dead birds you are playing with yourself. Even the AM broadcast rules are set up at 50k, 5k, and .5kw because if you can't get 10db it isn't worth the effort. The diff between 300 and 100 watts will be significant maybe twice a year if you are really active.

3. You are plunging into this like a rookie CBer firmly convinced CB is radio; it is not. Rather it is a restricted band and garbage freqs at that so that things are skewed into a real hothouse environment and a real gang of thieves. Couple that with enough mythology to fill several Cecil B. deMille movies and the net result is that when you know CB, you really don't know shit. Some, like Jay and others, know bullshit when it is presented -- the mark of an educated man. Not entirely convinced that you do, or even want to. That is sad. Self-education is the name of the

Amateur game and you are blundering about like Ahab looking for a whale.

Said another way, ignorance is curable but stupidity is for life.

4. The same blind 'CB is radio' BS will cause you to ignore other aspects of self-ed including such wonderment as operating practices and recognizing what band condx are and how to deal with them. You will miss out on the comraderie for no better reason than any reasonable soul will look at this installation you will show off with great pride and remember he had an appointment in Pawtucket Gulch an hour ago. Take the blinders off Toto, this ain't Kansas any more.

5. Your first lesson. Technicianing.
a. know when to quit
b. know when never to get started
c. you can't out-engineer the man who built it armed with twofanzines and a parts catalog.

Dick N&#65533;BK

2659. Scanners 4 Sale

Newsgroup: rec.radio.cb
Date: 2002-03-01 02:59:37 UTC
From: klarrg@aol.com
Message-ID: <20020228215937.07490.00000796@mb-ce.aol.com>
Source record: 116919

I have the following scanners for sale...

1.) Regency Z-10 professionally converted from 10 to 30 channels with beep-delete and audio enhancement mod.Radio is a SOLID 9 out of 10 both cosmetically and functionally, and includes back-of-set antenna and power cord (no box or booklet).Scanner is in AMAZING shape for its age and is housed in an attractive, wood-look cabinet with LARGE bright green LCD display . Covers 30-50/144-174/406-512 Mhz. $40 SHIPPED

2.) Bearcat BC-12 CRYSTAL 10-channel base unit. These are quite rare to find, and this one is in BEAUTIFUL, virtual MINT condition (SOLID 9 of 10 !).Has scan speed adjustment control and delay on/off switch. Includes antenna and power cord (no box or book).Works and looks great..a must for collectors or, as a reliable backup radio ! $40 SHIPPED

Radios shipped by USPS parcel post. Insurance optional if requested as is different shipping method for additional cost as per USPS rates. If interested or have any questions, feel free to Email me @ any time. All replies answered. Payment via M.O. or personal check (w/ 14-day waiting period for clearance).

Thank You and Happy Monitoring !!

And as just another incorrect American, I have to ask just what is a
"looser"? Is it something
that has come "loose" from its moorings? Is it "looser" than it was
yesterday? Oh! Could it
be that you meant "Loser"!

Seriously, (at least on the American side of the pond) the various
expressions of the verb "to
lose" and the noun "loser" are the most misspelled and misused words on the
internet. How come we use these words so "loosely"?

Jerry

Actually the guy was doing "somthing else"
It was in the UK, a train was temporarily stopped in the countryside.
I heard the story on the trucking Bozo or was it Hanniety ? on MW
The passengers were bored and looking around and spotted the guy wrestling
and struggling behind the goat and flooded the police with phone calls.
The trains there use GPS so the loony was caught via helicopter and arrested
within minutes an placed in a nut-house.
.....Talk about a show

2663. Hand helds with Regular antenna

Newsgroup: rec.radio.cb
Date: 2002-03-01 03:48:44 UTC
From: matt johnson <mqjtg247@bellsouth.net>
Message-ID: <3C7EFA1B.5F112AFD@bellsouth.net>
Source record: 116925

Thinking about getting a Midland 75-810 for use in my car and to have around the house for weather. Will a regular size antenna help significantly?

Thanks

Matt

2664. Re: What does your wife/husband/partner think of your hobby?

TW,

You ought to go down to the coast of NC and the southeastern part of Virginia. I finished high school in Hertford, NC (yes, I knew Catfish Hunter the Yankee pitcher and his wife Helen). When I first moved there, I was flummoxed because I could not decypher the brogue of most of the people. The "ou" vowel combination had several variations so that a sentence could come out either "I came 'ayt'n' de hyse to drive 'dyne' a-bite the sine", or, "I cam oot'n da hoose tuh drive doon aboot de soond". Er, something like that. Coupled with a clipped speedy delivery, their accent was extremely difficult. Incidentally, the translation of the above "mystery" sentence is "I came out of the house to drive down about the sound (Albemarle Sound)". I was utterly lost and felt like I had fallen off the world. I used to say that the world ended at the eastern edge of Rocky Mount, NC because of the desolation and flat country down there. I was used to the country twang of Western NC, and the different manner of speaking made me feel that much more isolated.

The truth is, that particular brogue is a holdover from the first English settlements on the east coast--such as the one on Roanoke Island, NC. In those days (1960s), folks there referred to the "trunk" of a car as the "boot"--same as British. Another word was "strumpet" that was often used as an invective when annoyed at some person or thing that happened to be unco-operative. This word means, in the strictest sense, "whore", and, again was a leftover from Olde English. I can't speak for the current speakers of the Queen's English, but this was what I was told about the origins of the accents, words, and phrases I encountered when I lived out there. I made friends, graduated high school--even picked up some of that speech for awhile-- but I couldn't hang, so in 1967, I said g'bye and headed west again to "re-learn" the country "twang" I grew up with and re-acquaint myself with the friends I left behind in 9th grade. Lots of folks around these "hyar" parts just can't wait to go to the beach in the summer, but I lived there long enough to get tired of the heat, sand, hurricanes, giant mosquitoes, and deer flies that won't die--even if you slap hell out of yourself in a vain attempt to kill

one of the damned things. And BITE!! OO-WEE!! So I am a confirmed
hillbilly and intend to stay that way!

I AM, however, told that I can do a quite good imitation of the proper
British gentleman. No
offense meant to our British friends. A friend and I sometimes get together
and crack each other up making wisecracks with a mock British accent and
feigning high indignity at each other's irreverence. It is, however, only
in good fun. I once did a local cable spot doing this
and the target audience, judging from the mail, thought I was from Britain.

Why is it that there always has to be some smart-arse Brit chime in and
say that Yanks really don't speak/write English? We communicate in the
same language as you, albiet with variations, but it's still English.
Canadian French is different from that spoken in France, but it's still
called French. Ditto Mexico and Spain. However, English is supposed to
have a different set of rules, according to wankers like you.
-
In all fairness, we really don't speak true English, we speak an
Ameicanized, hybridized, bastardized version of English, but it sure as
hell ain't English..

As to the code test, different things work for different people. I found
that Gordon West's
tapes worked just fine. I also think it is not a good thing to try to
"memorize" it alphabetical-
ly. That DOES take longer. Many of the Morse training tapes teach it in
"like" groups: that is,
E, I S, H, 5 then T, M, O, 0 (zero), and so on. This is easier to recognize
and allows one to
build up to complete sentences more quickly. And, don't start
sending--leave the key alone.
After all, anybody can send--even if they don't know the characters--by
reading them off a
card, right? But if you can't HEAR and instantly write down the
corresponding character, what
good is it? Concentrate on COPYING it. Once you can hear the letters,
sending is no problem.

Hope this helps. good Luck!

Hey Twithead, all anyone has to do is a search on your posts to find
plenty of insults coming from your webtv addy. Insults, filth and
bile, all with you as the author. Hail the reigning queen of newsgroup
loonies! Look in the mirror Twithead, cuz you are wearing the crown.
You should go back to posting as 1mangang again. And then there's your
saucer man post. Tsk tsk. You ought to think before you type. Good
thing the AKC boys are here to remind you of your colorful past.

Afraid ta take a roll call of YER close pals, Twithead? Dweebo = gay
gangster pothead. PeePeeholic = gay lawnboy wimp. Trainedpuppet = gay
criminal outlaw. Fagshark = gay child molester whiner. Etc etc etc.
Not an especially respectable lineup, is it?

>

Top posting is one Internet convention, and makes sense
if you have been following a thread, for you get to the
latest contribution immediately, and then only need
to refer to the previous stuff if your memory is poor.

Bottom posting is another convention which results
in postings being ignored because the new comment is off
the screen, and when you've got of the order of
2000 postings per day in different newsgroups, you ain't got
time to page down.

I think I'll give it a shot. Heck, I might even turn the power down to
approx. 15 watts. I'll make the folded dipole from 300 Ohm twin-lead
and a spare voltage balun I have laying around.

2679. Motorola Radius GM300 Radio Questions

Newsgroup: rec.radio.cb
Date: 2002-03-01 12:56:39 UTC
From: chicane <chicane@->
Message-ID: <3c7f7bcc@nexus.comcen.com.au>
Source record: 117051
Cross-posted to: aus.radio.cb,rec.radio.cb

Hi all,

I recently obtained a Motorola Radius GM300 radio from a friend of mine, and
I want to install it in my car.

Questions:

Below is the tech specs. What services in Melb, Australia use these
frequencies?
What is the best sort of aerial to get for this, for range etc?

Thanks for your help

regards,
Chicane..

Technical Specifications:
VHF
UHF

Frequency
136-162 MHz.
146-174 MHz.
403-433 MHz.
438-470 MHz.
465-495 MHz.
490-520 MHz.

Channels
8 or 16

Size
2" H x 7" W x 7.75" D

Power Output
1 to 10 Watts
10 to 25 Watts
45 Watts
1 to 10 Watts
10 to 25 Watts
25 to 35 Watts
25 to 40 Watts

I asked (axed?) you if you were on drugs. A legitimate question. One in
which you have neglected to answer. If you interpret that as an insult,
that's your problem.

>
> You have not provided any counterpoints (other than the moral
> equivilency arguement that you still don't seem to grasp the concept

> behavior on the radio.
>
> -Are you alright? Once again, you brought up the moral aspect

NO I HAVE NOT!!!!!! Do you know what "moral equivilency arguement"
means?

You keep making the comparison between the actions of one set of people
(USENET groupies), with the actions of another (CBers), and making the
"Moral equivilency arguement" that because group 1 does one thing, that
group 2 is justified in doing the same or similar. This has been the
basis of your whole position from the start.

, not me.
> The problem began when you were asked to apply your own logic.
> Nowhere will you find me alluding to anything of the sort that you are
> trying to imlpy I condone, such as rude behavior on the air.

Illegal operators are inconsiderate to other people on the band. If you
condone illegal operation, by default, you are also condoning
inconsiderate behavior.

> You keep getting hung up on the word "moral"
>
> -You keep bringing it into the conversation when it has no place. If it

You are a hypocrite if you profess to be a true believer, and yet treat
other people with disrespect, which is not what a true believer would
do.

>
> That's not what I've been trying to illustrate.
> You try to make the case that since "some person" breaks "some law" that

So you are against rude and inconsiderate behavior on the CB?

> This is your way of avoiding the question, again.

I am not avaioding anything but your attempts at steering the debate
away from the core issue, which is the behavior of CB radio operators ON
THE AIR.

> you planned so now you are reduced to lies?

Where have I made any untrue statement?

> -Says you.
>
> making us profoundly aware of your inability to apply right and wrong to

> beyond it.
>
> So now you want to argue the definition of "rude" and "inconsiderate"?
> Now you're REALLY reaching.

>
> -Not at all. Read it again.

I did, and it still says nothing other than you're inability to answer a simple basic question without attemting (However unsuccessfully) to steer the core issue into an unrelated area.

I'll say it again. I don't care what people do on USENET or any other hobby right now. I am concerned about CB (and ham to some degree) radio operators and their attitudes toward the rights of other operators. If you cannot keep on this topic then don't bother responding.

>
> The definition of rude, inconsiderate (and the rest of the adjectives
> that describe outlaw CBer's attitudes toward the rest of the operators

> -I',m certain among the company you keep, it may very well be,
> "universal", but you professing to speak for the people around the world
> is comical so and far removed from the truth that it is lost upon you.

Telling someone to go "shit in his hat" is considered acceptable civilized behavior somewhere in the world? Deliberate overpowering other people's conversations without due consieration is also acceptable behavior? C'mon, you can do better than that. You're starting to grab straws now.

> I'd rather debate your flawed interpretations of rude and inconsiderate
> actions and whatever else you deem it, when applied to usenet.

I'm sure you would as it steers you away from the main issue, and takes the heat (somewhat) off of you. But I'm not biting.

> It's not "my" morality at issue here. It's the generally accepted
> definition that we, as a supposed civilized society, have applied to
> certain behaviors.
> Your attempts to compare
>
> I'd figured it would be a great time to
> remind you that society generally holds true that when one is reduced to
> hurling repeated insults, he has lost his debate.

Which reminds me yet again, Are you on drugs? The world waits with baited breath for the answer.

> what happens on the radio with what happens on this (or any other)
> USENET group is irrelevant to this discussion, despite you best attempts
> to divert the discussion from the core problem.
>
> -Simply because you fail to comprehend relevance to your own logic when
> applied evenly does not make it irrelevant.

Sure it does. What relevance does USENET activity have to acions of CBers on the air? Other than comparing deeper societal ills, which is a

problem that is far too dynamic and abstract to debate with any hope of closure.

> You have managed to manipulate your "core" problem to to one of your own
> personal indiscretions of insults, and now lies.

I have managed to keep the original topic of discussion on track, despite your extensive efforts to derail, spin and change it.

> You must be very proud to have been accepted and referred to by name by
> our contingency of trolls so eagerly and quickly.

I'm sure they may be getting some entertainment value out of watching me trap you in a corner. But I assure you, I have no interest in playing silly forged post and troll games.

>
> You can argue legality, and your "right" to ignore a rule, based on some
> misguided sense of "consciencious objection",
>
> -Conscientious objection applies only to the military.

Note the "" around the term. It implies a figurative interpretation. Nonetheless, the point is valid.

> Certain rules are outdated and ignored intentionally.

But you don't have the right to do so, especially when it disrupts other people that are attemping to follow the rules. Certain laws may be outdated, but courtesy never is.

> but you cannot argue that your behavior is inconsiderate of other
> people and their rights.
>
> -I don't...people like you do and I try to set them straight and see
> things more clearly. This is usually met with insults from the troll
> gallery.

How you propose to "justify" rude and inconsiderate actions on the radio?

Dave
"Sandbagger"

2681. Well Chuckie, you deserve what you get.

Chuckeeee,

You made the threats to N8. This is documented and IP traced. That's why your ISP spanked you back then.

How SHOULD someone feel if threatened in the manner you did?

I think if N8 or someone else thumps your fat face you are getting off lightly.

Actually, it may be a good thing if you fear no one, etc. That way you are showing that you are too damned stupid to stay outta trouble.

It is exceedingly funny to see someone like you whining about something MUCH milder than what you did. Only a sick pervert posts the kind of threats you posted. If you get your ass kicked for them you had it coming.

I might just come up to the show myself. It would be great to see you get it. That is, IF your cowarldy behind the keyboard style allows you to show up.

ALSO...a last thought. If you bring illegal equipment to sell you will be ratted on and escorted off the premises by the police and TMRA's security. Illegal equipment is not knowingly tolerated by the Toledo hamfest. That day is over, sissy.

Whatcha got to say now, punk? Wanna DO something about it?
Naaaaahhhhh. Can't do it. Too much of a puke sissy.

Dave
"Sandbagger"

-Well, let's see. The morality ssue that you brought up so many times seems to have struck a nerve when applied to your own logic and situations,

How so?

-You have begun to be insultive in your posts, indicative of anger and nothing to do with your many topics touched upon.

I asked (axed?) you if you were on drugs. A legitimate question. One in which you have neglected to answer.

-Everyone is on drugs, Dave, whether it's Lelnad for his high blood pressure or someone with their coffee or chocolate habit. Do try to stay on topic, once again old boy.

If you interpret that as an insult, that's your problem.

-The problem(s) are all yours, Dave. This apparent one has to do with you delving into my personal life and off subject and topic. You are a hypocrite from the word go, Dave.

You have not provided any counterpoints (other than the moral equivilency arguement that you still don't seem to grasp the concept of), to justify why we should tolerate rude, arrogant and inconsiderate behavior on the radio.

-Are you alright? Once again, you brought up the moral aspect

NO I HAVE NOT!!!!!!

-Since you no longer can remember what you say, I'll take this point as your concedement on the topic.

Do you know what "moral equivilency arguement"
means?

You keep making the comparison between the actions of one set of people (USENET groupies), with the actions of another (CBers), and making the "Moral equivilency arguement" that because group 1 does one thing, that

group 2 is justified in doing the same or similar. This has been the basis of your whole position from the start.

, not me.

The problem began when you were asked to apply your own logic. Nowhere will you find me alluding to anything of the sort that you are trying to imlpy I condone, such as rude behavior on the air.

Illegal operators are inconsiderate to other people on the band.

-LMAO. Your eyes are brown, Dave.

If you condone illegal operation, by default, you are also condoning inconsiderate behavior.

-Then you condone usenet rule breaking....oh, but by default of course.

You keep getting hung up on the word "moral"

-You keep bringing it into the conversation when it has no place. If it did, you would have no problem applying it across the board, not just as you see fit.

I "Bring it into the conversation" to illustrate your defense. But you are they one using it.

-Perhaps a slide back to see where you originaly tried and failed to draw an analogy between morality and society will jog your foggy memory banks and stop you from making further comments demonstrating your sheer lunacy and inability to remember what you claimed or denial of how you brought it up.

in the term "moral equivilency arguement". All you see are ringing church bells, and some preacher holding a bible calling you a sinner.

-He isn't calling me a sinner, it is clear you are having a problem following the posts in the thread and who said what. Im a God fearing man, always have been, and I give him his due, which is one of the reasons I am so blessed in all aspects of my life.

You are a hypocrite if you profess to be a true believer, and yet treat other people with disrespect, which is not what a true believer would do.

-I treat people in kind, Dave, and they always get the benefit of the doubt, Dave. Of course, you are welcome to set forth as many forges as you can find to try and make this seem not so, after all, judging by your insults, you have showed the type contempt is not beneath you.

That's not what I've been trying to illustrate. You try to make the case that since "some person" breaks "some law" that it's ok for you (or other CBers) to be rude and inconsiderate to other CBers.

-Not true. You made the analogy when you were asked to apply your own moral logic.I never claimed it was "ok" to do what you suggest.

So you are against rude and inconsiderate behavior on the CB?

-Tht's like asking if someone was against sunshine. What kind of question is that? Oh, I know, one to back pedal with. If it will help you relax and maybe even get some sleep at night, I willl state unequivocally for you that I don't condone rude, boorish behavior, anywhere. Or splattering the spectrum, or interfering with others. etc. But see, Dave, you already know this, as does everyone else that has been around as long as you, you just offer another avenue that the troll galley stroll down on a regular basis, one of which is reduced to accusing lies and fodder, one that takes the focus of the conversation and attempts to turn it into one of a personal matter, something only the trolls do, and something that you have done in this thread several times over.

But judging by the way you fight tooth and nail and say usenet is no comparison, I wonder if you are capable of returning an answer....so, we can all draw an inference that you DO condone that type behavior on usenet, hmmm?

This is your way of avoiding the question, again.

-Not at all, as I said, this is your way of a sour attempt to divert the topic from your mistakes to one of ME or my personal feelings. Yes, Dave, you are a hypocrite live with it, learn from it, and move on. You can't make a comment that, " emotions are irrelevant," then ask me how I feel, without showing your hypocrisy, Dave. Smarten up.

I am not avaioding anything but your attempts at steering the debate away from the core issue, which is the behavior of CB radio operators ON THE AIR.

-No, that was one of YOUR claims, not mine.

you planned so now you are reduced to lies?
Where have I made any untrue statement?

-I have addressed each fallacy as you attempted to spin them.

making us profoundly aware of your inability to apply right and wrong to anything other than what you consider proper radio technique. So, to answer your question, each time you mention behavior considered not in agreement with your views, you are indeed bringing up morality, but you keep begging me to drop it, yet it is you that seems unable to get beyond it.
So now you want to argue the definition of "rude" and "inconsiderate"? Now you're REALLY reaching.

-Not at all. Read it again.

I did, and it still says nothing other than you're inability to answer a simple basic question without attemting (However unsuccessfully) to

steer the core issue into an unrelated area.
I'll say it again. I don't care what people do on USENET or any other hobby right now.

-Stop being so selfish and look beyond yourself. It isn't about YOU. Many others ARE concerned about it, just because you aren't doesn't mean the rest aren't..Plus... One could use your same argument concerning radio..oh, wait, that's right
it only applies to YOUR side and to your views.

I am concerned about CB (and ham to some degree) radio operators and their attitudes toward the rights of other operators. If you cannot keep on this topic then don't bother responding.

-Now you are trying to dictate what another does. See Dave, you have a power issue,lack of control, you feel helpless over others and it apparently bothers you to some degree. I did you the courtesy of answering your bogus question, indulge me and answer mine, or are you that rude, inconsiderate and confused of other's that you refuse to comment on usenet?

The definition of rude, inconsiderate (and the rest of the adjectives that describe outlaw CBer's attitudes toward the rest of the operators they aren't "buds" with) is pretty much universal.
-I',m certain among the company you keep, it may very well be, "universal", but you professing to speak for the people around the world is comical so and far removed from the truth that it is lost upon you.

Telling someone to go "shit in his hat" is considered acceptable civilized behavior somewhere in the world?

-Whaaaa? You are off topic again, beginning to use profanity, and appear to be posting in direct relation to your emotive responses.

Deliberate overpowering other people's conversations without due consieration is also acceptable behavior?

-You have done just that each time usenet behavior was presented for you to comment on.
Wanna see it again? Hypocrisy at it's finest.....

C'mon, you can do better than that. You're starting to grab straws now.

-I'd rather debate your flawed interpretations of rude and inconsiderate actions and whatever else you deem it, when applied to usenet.

I'm sure you would as it steers you away from the main issue, and takes the heat (somewhat) off of you. But I'm not biting.

-True to fashion, you suffer from delusions of grandeur as well. Your totally overestimated your value to the equation. The issue is whatever it is, not what you select, and I'm grinning ear to ear and greatly amused that you somehow think enough of yourself to feel you have capability of bringing me "heat", and whatever definition you bring with

it. Bringing :"heat", is what a troll does best, and here you are admitting a stab at it and can't even do that right.

It's not "my" morality at issue here. It's the generally accepted definition that we, as a supposed civilized society, have applied to certain behaviors.
Your attempts to compare

- I'd figured it would be a great time to
remind you that society generally holds true that when one is reduced to hurling repeated insults, he has lost his debate.

Which reminds me yet again, Are you on drugs? The world waits with baited breath for the answer.

-Delusional, Dave, double d, kinda has a ring to it, no? Now you profess to speak for the world?
(Chuckle.) At least your delusional aspirations are high.

what happens on the radio with what happens on this (or any other) USENET group is irrelevant to this discussion, despite you best attempts to divert the discussion from the core problem.

-Simply because you fail to comprehend relevance to your own logic when applied evenly does not make it irrelevant.

Sure it does. What relevance does USENET activity have to acions of CBers on the air?

-I never tied it to cb, it is just you that redundantly does so. I merely asked you to apply your standards of human behavior and accepted standards you keep crying about to another medium and you went berzerk, seeing the hypocritical light this has shed on you. It also served to slash the pretentious veil of virtue you tried to set forth concerning yourself, an unintended but decidedly welcome bonus.

Other than comparing deeper societal ills, which is a problem that is far too dynamic and abstract to debate with any hope of closure.

-You have managed to manipulate your "core" problem to to one of your own personal indiscretions of insults, and now lies.

I have managed to keep the original topic of discussion on track, despite your extensive efforts to derail, spin and change it.

-Pointing out your deficiencies concerning insults is in no way spin, and the only support you will receive from that absurd tongue slip is from the kennel.

-You must be very proud to have been accepted and referred to by name by our contingency of trolls so eagerly and quickly.

I'm sure they may be getting some entertainment value out of watching me trap you in a corner.

-First it was only a topic, then came your insults, then came your self-admitted but comically failed attempt at bringing what you call "heat", now an attempt to 'trap'. You are doing very well, Dave.

But I assure you, I have no interest in playing silly forged post and troll games.

-Who mentioned anything concerning forges? Your uncanny inability to remain close to topic belies your other talents.

You can argue legality, and your "right" to ignore a rule, based on some misguided sense of "consciencious objection",

-Conscientious objection applies only to the military.

Note the "" around the term. It implies a figurative interpretation. Nonetheless, the point is valid.

-I won't educate you concerning the term. A quick search will reveal your but your blunder. Since the definition was wrong, the point is invalid, since the context does not exist.

Certain rules are outdated and ignored intentionally.

But you don't have the right to do so,

-Never claimed I did. What I do hold, is I have as much right to break the rules as you do to enforce them.

especially when it disrupts other people that are attemping to follow the rules.

-Again, this is more window dressing and innuendo from the trollup camp. I never claimed such.

Certain laws may be outdated, but courtesy never is.

-Your definitions have been questionable and at times, plain wrong, so I won't debate with you whatever your interpretations are. An interpretation is just that......even if you don't truly grasp it.

  but you cannot argue that your behavior is inconsiderate of other people and their rights.

-I don't...people like you do and I try to set them straight and see things more clearly. This is usually met with insults from the troll gallery.

How you propose to "justify" rude and inconsiderate actions on the radio?
Dave
"Sandbagger"

-I don't. You justify it on usenet.

2685. Re: Measuring ERP At "Keydowns"

Newsgroup: rec.radio.cb
Date: 2002-03-01 15:26:11 UTC
From: Train <cbmods@optonlineNOSPAM.com>
Message-ID: <n4Nf8.19261$Iu2.6924804@news02.optonline.net>
Source record: 116946

The tape tells the story. Winners at the line are notified by the line judge who is told usually via cell phone who took that round. Later in the evening the taped results of the day are played for the group and if there are any arguments they can be settled at that time. There have been cases where the winner has been disputed by most and still the "home group" that sponsored the event usually will have the last say in who the winner is to be. Detractors can bitch and whine all they want but keydowns will continue to be held and much fun will still be had be all who attend. Douchner and wankers like him will continue to bitch and complain about these events happening but will have NO effect on the fact that they will continue! www.bigradio.biz is looking into the possibility of a MAJOR New York City area event for later this year or the spring of next year so keep an ear open for developments.

From: joxendi@bellsouth.net (Jerry Oxendine)
TW,
You ought to go down to the coast of NC and the southeastern part of Virginia. I finished
high school in Hertford, NC (yes, I knew Catfish Hunter the Yankee pitcher and his wife Helen).

-Cool beans. Hope ya' got a few sigs from him, maye a bat, glove, and ball.

When I first moved there, I was flummoxed because I could not decypher the brogue
of most of the people. The "ou" vowel combination had several variations so that a sentence
could come out either "I came 'ayt'n' de hyse to drive 'dyne' a-bite the sine", or, "I cam oot'n
da hoose tuh drive doon aboot de soond". Er, something like that. Coupled
with a clipped
speedy delivery, their accent was extremely difficult. Incidentally, the translation of the above
"mystery" sentence is "I came out of the house to drive down about the sound (Albemarle Sound)". I was utterly lost and felt like I had fallen off the world. I used to say that the world
ended at the eastern edge of Rocky Mount, NC because of the desolation and flat country down there. I was used to the country twang of Western NC, and the different manner of speaking made me feel that much more isolated.

-I've been to the coast. Hell, some of that dialect you speak of goes from the outer banks in to Winston-Salem all the way to Greensboro, the hills, and into parts of Nawfolk (Norfolk) Va. Let's not forget the scrub lowlands either.

The truth is, that particular brogue is a holdover from the first English settlements on the east
coast--such as the one on Roanoke Island, NC. In those days (1960s), folks there referred
to the "trunk" of a car as the "boot"--same as British. Another word was "strumpet" that was
often used as an invective when annoyed at some person or thing that happened to be unco-
operative. This word means, in the strictest sense, "whore", and, again was a leftover from Olde English. I can't speak for the current speakers of the Queen's English, but this was what I

was told about the origins of the accents, words, and phrases I encountered when I lived out there.

-Real interesting stuff, thanks for the run down on the local jargon. The other (and my personal favorite to listen to) that I feel is such a colorful dialect is that thick cajun country accent. Something about it...

I made friends, graduated high school--even picked up some of that speech for awhile--
but I couldn't hang, so in 1967, I said g'bye and headed west again to "re-learn" the country
"twang" I grew up with and re-acquaint myself with the friends I left behind in 9th grade.

-Hehehe...summer of love, what a great year to be on the road.

Lots
of folks around these "hyar" parts just can't wait to go to the beach in the summer, but I lived
there long enough to get tired of the heat, sand, hurricanes, giant mosquitoes, and deer flies that
won't die--even if you slap hell out of yourself in a vain attempt to kill one of the damned things.

-A bb gun works for the larger ones while it's still light out.

And BITE!! OO-WEE!! So I am a confirmed hillbilly and intend to stay that way!

-Deer flies, horse flies, we got 'em in the swamp..I know the bite well....the flies seem to know me well now and stay away. Eating raw garlic (a strong onion will work in a pinch but it has to be raw) an hour before leaving the house will keep away the bugs (and everyone else).

I AM, however, told that I can do a quite good imitation of the proper British gentleman. No
offense meant to our British friends. A friend and I sometimes get together and crack each other up making wisecracks with a mock British accent and feigning high indignity at each other's irreverence. It is, however, only in good fun. I once did a local cable spot doing this and the target audience, judging from the mail, thought I was from Britain.
73
Jerry

-Ha! Good show, chap. There is a bloke around here who does a fairly good imitation.
Also a chick in DX land from Arizona with a heavy British accent. Each time she keys up everyone thinks the DX from the UK is sliding in.

2688. Re: Do you have a sick Radio or Amplifier???????

Man, in this day and age ya gotta define "sick"!
There are thousands of people out there whose idea of a badass radio is a
Wal-Mart $40 special with a "kickass" Rat Shack amplified mic and "outlaw"
1/4 wave whip bought at the local truck stop.

2690. Re: Power supply recommendations for Grant XL and Palomar 250

Newsgroup: rec.radio.cb
Date: 2002-03-01 16:03:53 UTC
From: Train <cbmods@optonlineNOSPAM.com>
Message-ID: <JDNf8.19366$lu2.6994978@news02.optonline.net>
Source record: 117001

A 30 to 35 amp supply will do you fine on those units and don't worry about the circuit breaker in the house. The rating for the breaker is @ 120 volts for 20 amps. You're going to be running a power supply that will produce 35 amps but @ 13.8 volts which works out to a max draw of 483 watts and that is well below the 2340 watts available to you from a 20 amp breaker @ 117 volts. The amps you are looking at as the max draw are different in that they are amps that have been converted down to 13.8 from 117 at the wall.
The last thing I would add is this:
DON'T BY A SINGLE DAMNED THING FROM COPPER OR H&Y!!!!!!!!
Buying from them is just asking to screwed around with. They have no clue about what custom service is or should be and they most likely never will.

But the most useful convention is to trim the posting to the points
you wish to answer, and interleave your replies accordingly. In this
way the ng suffers neither of disadvantages of the other.

I would have thought that someone who claims six or more years in
usenet just might have become aware of the third option before now.

> but why would a freebander put a beacon on ten meters?

They don't, and that is the point. Monitoring a Ham beacon on the bottom end of 10m would work just as well, and people can save themselves the necessity of putting one in to operation only a few hundred KHz away, on 11m, and having to deal with the question of just how legal would it be. Since as you rightly pointed out just monitoring a beacon on short wave is fine, and costs nothing, I just fail to see the logic in wasting time, money, and effort to repeat what has already been done.

If the exercise is just getting the experience, and or having fun, in putting a beacon in to operation, that is a whole different subject . However the original message said " This is just a small experiment to help determine propagation paths to Nauru." So it doesn't sound to me like its being done just for grins and giggles. What the original poster did not state is if there is in fact any beacons working in that area, and on what frequency.

So to summarize Tim, if there is already a beacon operating on 10m there then putting one in to operation on 11m I think would be a waste of time for the reasons I outlined above.

Just doing a quick search on Google turned up the following links. As you will see there has already been several trips to the island where data was collected on propagation paths on frequencies up to the Ham 6m band. I would assume that a well written E-mail to the members of the different expeditions could result in getting a copy of their logs etc. It would appear that in one case the expedition operated on H.F., 10m, which could provide the data that the original poster is hoping to gain with his current proposal.

but why would a freebander put a beacon on ten meters? surely a 11 meter
beacon makes much more sense for him.
-
Exactly, but some would like to have us believe otherwise. This spewage
leaks from the same infected camp that claim most freebanders are the
frequent ten meter intruders when nothing could be further from the
truth.

> Keep it down to a novel, if you can.
> Just trying to learn something here . Thats all.

Decibel, named for good old Alexander Graham Bell, deci is tenths.
The idea in audio is that one dead bird is the smallest unit where a
difference can be determined by the human ear and that the perception of
loudness is not linear. So ninety dbA is perceived as twice as loud as 80
dbA when in fact it has 10 times the mechanical moxie behind it. The
Richter scale is logrithmic, a six is ten times a five. It happens rf
does this as well. It is a method of comparison so it is often used, as I
just did, as a comparison to a standard so you will see dbm (comparison to
a milliwatt across 600 ohms traditionally, 50 in a lot of cases), dbi vs a
so-called isotropic radiator, a dbA is with respect to a minimum
perceptable sound,etc. The range of sound from perception to pain BTW is
about a factor of a trillion or 120 dbA; the range of rf runs from about
.25 microvolts per meter for audibility to where the standards set in at
about 80 volts per meter (WHO standard).

Back when broadcast audio was done over phone lines, Ma Bell liked things
at 0 dbm which did not imply no signal, just a milliwatt over their
nominal 600 ohm phone lines so zero-level, now known as 'line level', was
marked on all the station boards and you see the needles bouncing into the
red in all the old movies.

So to double your signal, you need ten times the power or 10 db or 1 bell.
If you can't go to a kw, forget it in other words.

The nice thing about dead birds is that one can simply add and subtract
them for a lot of things so if you pick up 12 db in a full max amp, and 8
in an antenna you have 20 which is a ratio of 10**2 or 100 and most
certainly worth the effort if you can stand the expense for which you
basically get four times the perceived moxie. So to a large extent, the
pride of ownership is second only to the expense.

The formula is db = ((10 (log P1/log P2)) but it is easier to simply
remember that 10 db is a factor of 10 and a doubling is 3db. So if you
double power you get 3db, double again and you are up to six, double again
and get nine and the last dead bird gets you the full factor of ten.

Won't win you the accuracy trophy but in the inexact world of radio it works well enough.

Kind of makes you think when you see a -55 db output from a mike and that is a fairly hi output one; some magnetic carts were -80 or so. Also tends to give you an idea why driving by a church on Sunday morning with the services being recorded and you on your Belchfire 500 amp showed up in the services better than the preacher.

I hope by now you might have figured out why going from 100 to 300 (if you can get that hi) is right up there with pissing in the wind, you at least are pissing downwind, and why the experienced souls here kind of asked just why you would do that. The installation would be an object of wonderment and worship but not what you might expect.

A lot of junk is sold to people who seriously believe that tripling one's power triples range. Some with a bit of geometry are willing to settle for the square root, 1.763 but not too many would buy it if they realized how little effect it really has.

****

I know I did and fully intended to flame your pretty pink tushy in the spirit of the man beating his mule with a 2x4 trying to get its attention. To be honest, I did not expect much if any response. I am happy to be wrong.

if voobner disappeared whom would take his place? special agent in
charge,who would preach the part 97 rules and regs?
who would patrol e-bay for illegal cb gear? who would keep the
freebanders in line? or the airways free of trash??'
maybe the 1'st ammendment

You tell'em brotha!

NIGHTMARE motor van around the Big Trees got down!

2716. They have finally found a diagnosis for my condition.

Newsgroup: rec.radio.cb
Date: 2002-03-01 22:48:56 UTC
From: arcweb@bnnorth.net
Message-ID: <3c80053e.11411653@news.bright.net>
Source record: 117026

They have finally found a diagnosis for my condition.

Hooray!! I have recently been diagnosed with A.A.A.D.D.! Age
Activated Attention Deficit Disorder...

This is how it goes:

I decide to wash the car; I start toward the garage and notice the
mail
on the table. Ok, I'm going to wash the car. But first I'm going to
go
through the mail.

I lay the car keys down on the desk, discard the junk mail and I
notice the trashcan is full. Ok, I'll just put the bills on my desk
and take the
trashcan out, but since I'm going to be near the mailbox anyway, I'll
pay
these few bills first.

Now, where is my checkbook? Oops, there's only one check left. My
extra checks are in my desk.

Oh, there's the coke I was drinking. I'm going to look for those
checks. But first I need to put my coke further away from the
computer, oh
maybe I'll pop it into the fridge to keep it cold for a while.

I head towards the kitchen and my flowers catch my eye, they need some
water. I set the coke on the counter and uh oh! There are my
glasses.
I was looking for them all morning! I'd better put them away first.
I fill
a container with water and head for the flowerpots - - Aaaaaagh!

Someone left the TV remote in the kitchen. We'll never think to look
in the kitchen tonight when we want to watch television so I'd better
put it
back in the family room where it belongs.

I splash some water into the pots and onto the floor, I throw the
remote
onto a soft cushion on the sofa and I head back down the hall trying
to figure out what it was I was going to do?

End of Day: The car isn't washed, the bills are unpaid, and the coke
is

sitting on the kitchen counter, the flowers are half watered, the checkbook still only has one check in it and I can't seem to find my car keys!

When I try to figure out how come nothing got done today, I'm baffled because I KNOW I WAS BUSY ALL DAY LONG!!! I realize this is a serious condition and I'll get help, BUT FIRST I think I'll check my e-mail...

Please send this to everyone you know because I DON'T REMEMBER IF I SENT IT OR NOT!!!

Dick,

A few comments (in the same spirit as this 'educational' thread):

1) The Texas Star amp was one of the very few amplifiers that were originally designed with bias, so they were a little better than the rest that were out there at the time.

2) The Texas Star 350 High Drive is not really a high drive and his 100 watt driver will burn out the swamping resistors in the front end in short order, putting a quick end to any power gain debates.

3) I know people who are using the Texas Star DX500 amplifiers on 10 thru 80 with no problems.
They work better without any tuning at all than the old Metrons did with all their switchable impedance matching networks.

4) In your scenario in the prior post where you halved the frequency (27MHZ to 14MHZ), you also halved the load requirement (50 OHMS to 20 OHMS), so the transformer should work admirably. If you halve the reflected impedance you only need one half the minimum required inductance for the transformer to work properly,(as long as your collector current does not saturate the core); and the

ferrite mix they used does not saturate easily. The core materials for such applications are usually selected to have the highest CURIE temperature and not necessarily the highest AL value because you don't need that much inductance at 27MHZ to make an efficient broadband transformer. The other thing that works to help broadband the unit is the fact that the transistor gains increase dramatically as the frequency decreases.

5) Your dead bird explanation was a good one, but instead of just plinking them off the fence one at a time, my daddy taught me to wait at one end of the fence and when they land on the fence a single well placed shot will get them all! A 10 to 20 DB gain every time!

Regards,

Dennis O.

I must marvel at your ASTONISHING technical expertise. That was like HARD...wasnt it Train? Do you think I care if you know who my ISP is? If I did I certainly wouldn't have posted so obviously. There are several other ways to conceal the identity of a poster. It is you, Train, and your group of immature children and limp wristers on here who are scared and hide.

By the way, I wanna thank ya for jumping right up like that. It proves what the Anti-boys always say: "Train is good for a laugh every time. He barks on command."

It must suck to be a trained puppet.

HAHAHAAHAHHAAHH!!!

Chuckee got himself in trouble by making threats. Obviously you must approve of what the criminal keyclown did. Shows you that the Anti-Keyclowns are 100 per cent right about you, Train.

Dick,

A side question not necessarily on-topic:

Was it 'Heising' modulation that only modulated the screen grid voltage of the tetrode final RF stage?

If I remember correctly it required no modulation transformer, was pretty clean up to about 85% modulation, and 100% modulation was impossible.

Regards,

Dennis O.

GW,
This particular amp (old style)was produced before Texas Star got clever with the xtal controled cw transmitter
design working around the fcc rules.
I do not have the original schematic for it, but I doubt that it's changed much in theory.
Can an air variable capacitor take the place of the fixed caps to make it see 50 ohms at any given frequency
between10-80 meters?
With those ratings, the two 2sc2879's aren't going to produce nearly the stated output of 350 watts at 13.8
volts. Oh Well, It was worth asking. Tnx / Barry

Richard,
Forgive me for being logrithmically challenged, but how much power must I run to get that only worth while 10db gain, up from 100 watts?
Keep it down to a novel, if you can.
Just trying to learn something here . Thats all.

PS- individuals with RF Brain Damage need not apply.
Resume fighting now.

Dick,

A few comments (in the same spirit as this 'educational' thread):

1) The Texas Star amp was one of the very few amplifiers that were
originally
designed with bias, so they were a little better than the rest that were
out
there at the time.

I have actually heard a few and they did more or less run. They were
popular with some of the 10-watt Japanese rigs before that laid an egg but
a couple of TV transformers and a 4CX250 scrounged from commercial service
was my cup of tea for that dubious purpose. I think the key here is
'originally'. Things got mighty cheap later.

2) The Texas Star 350 High Drive is not really a high drive and his 100 watt
driver will burn out the swamping resistors in the front end in short order,
putting a quick end to any power gain debates.

To his credit, I think Barry is well aware of this.

3) I know people who are using the Texas Star DX500 amplifiers on 10 thru 80
with no problems.
They work better without any tuning at all than the old Metrons did with all
their switchable impedance matching networks.

I would expect they are being run into tuners or something that does not impose quite the burden on them. I will admit to having a VHF bias against untuned amps that grew out of Micors which were among the great broadband mixers of all time. With some form of antenna isolation, OK, but the concept disturbs me in the hands of the public.

4) In your scenario in the prior post where you halved the frequency (27MHZ to
14MHZ), you also halved the load requirement (50 OHMS to 20 OHMS), so the transformer should work admirably. If you halve the reflected impedance you
only need one half the minimum required inductance for the transformer to work
properly,(as long as your collector current does not saturate the core); and the
ferrite mix they used does not saturate easily. The core materials for such
applications are usually selected to have the highest CURIE temperature and not
necessarily the highest AL value because you don't need that much inductance at
27MHZ to make an efficient broadband transformer. The other thing that works
to help broadband the unit is the fact that the transistor gains increase dramatically as the frequency decreases.

If one could be assured they used a large enough core of something that could be traced OK. I am assuming powdered iron and that comes in frequency ranges so a priori one would have to guess whether they used a 20-50 MHz mix or a 3-30 mix.

Points well taken, thank you for the education.

5) Your dead bird explanation was a good one, but instead of just plinking them
off the fence one at a time, my daddy taught me to wait at one end of the fence
and when they land on the fence a single well placed shot will get them

all! A
10 to 20 DB gain every time!

Yup, blasting them with the 12-gauge is damned hard on fences. In my tootling around Omaha I have noted that on a 71kv transmission line Star the crows perch on the ground wire only, never the hot wires. So while waiting for my load of kids, I contemplate whether it is because it is on top or if they do not enjoy being part of the near field :-)

Regards,

Dennis O.

Agreed, but I believe that 'top posting' is also brought about due to
it being the norm for email. Thus for many email users, unused to
newsnet, it seems strange and inconsistent to bottom post.

The Heising system used a choke to isolate B+ and fed both the
single-ended modulator and the final (usually also plate and screen) from
the supply. When the modulator drew current it knocked down the plate so
the modulation was inverted (BFD) and of course not being able to

dead-short the plate supply it could not reduce output to zero. Actually worked pretty well for Gonset and some others.

I wish I still had my 1955 Handbook, everything you ever wanted to know about AM.

Among the alternatives to plate modulation, screen was probably second at some sacrifice in efficiency and it allowed cutes like controlled carrier and what we called Mongolian Modulation, known these days as swang. Just that no one went apeshit with it.

I kinda figgered you'd have them blasted deer flies down there, too---the kind with the wierd
looking wings. I swear, you cannot kill the devils unless you are willing to knock yourself out
as well! Smack one of 'em hard enough to leave your hand print on your leg, and the ******
'll just fly off like nothing happened! Oh, they have this crazy sort of grass down there I had never seen before. When I first walked out into the yard, I kept tripping over something, but
at first, I couldn't see what it was. Then I looked closely, and there was this wierd "grass" that
grew outta the ground in one place, sprouted shoots of leaves(?), or whatever, then grew BACK into the ground a few feet farther along. This "runner", or whatever it was, was what I
kept hooking my feet in. Then I looked down again and discovered to my horror that my feet
and ankles were covered to blackness with huge mosquitoes. Da heck wid dat!! But, I had
to endure for 4 years until I could escape from there. I venture down there, oh, once every 8 years or so to visit. Shows you how anxious I am to go down there.

I never thought to get autographs or keepsakes from Jimmy (Catfish). I mean, he was around
so much during high school, I don't think any of us that knew him really thought about it. However, Helen signed my Senior year annual as Helen Overton Hunter, so I *did* get some-
thing, although it wasn't meant as a souvenir---we were just kids about to launch out into the world to "conquer" it, signing annuals, saying goodbye, and just being friends. So, in spite of
the fact that Catfish was a budding baseball star, we just didn't think of him that way. It was
like, "Hey, Jim, nice to see you", and "Hey Jerry, what's been going on?"--stuff like that. And
Hertford is just such a small town out in the middle of the eastern flatlands, everybody just knew everybody. After almost 20 years, I went down there for a visit (1987) and walked into
a country store. The girl behind the counter had been in about the 9th grade when I graduated.
She just said, "Hey, Jerry, how ya doin" like I had never left! She probably didn't even KNOW I left. LOL!

Jerry
Twistedhed <twistedhed@webtv.net> wrote in message
news:2231-3C7F9F87-252@storefull-2317.public.lawson.webtv.net...
From: joxendi@bellsouth.net (Jerry Oxendine)
TW,
You ought to go down to the coast of NC and the southeastern part of
Virginia. I finished
high school in Hertford, NC (yes, I knew Catfish Hunter the Yankee
pitcher and his wife Helen).

-Cool beans. Hope ya' got a few sigs from him, maye a bat, glove, and
ball.

When I first moved there, I was flummoxed because I could not decypher
the brogue
of most of the people. The "ou" vowel combination had several variations
so that a sentence
could come out either "I came 'ayt'n' de hyse to drive 'dyne' a-bite the
sine", or, "I cam oot'n
da hoose tuh drive doon aboot de soond". Er, something like that.
Coupled
with a clipped
speedy delivery, their accent was extremely difficult. Incidentally, the
translation of the above
"mystery" sentence is "I came out of the house to drive down about the
sound (Albemarle Sound)". I was utterly lost and felt like I had fallen
off the world. I used to say that the world
ended at the eastern edge of Rocky Mount, NC because of the desolation
and flat country down there. I was used to the country twang of Western
NC, and the different manner of speaking made me feel that much more
isolated.

-I've been to the coast. Hell, some of that dialect you speak of goes
from the outer banks in to Winston-Salem all the way to Greensboro, the
hills, and into parts of Nawfolk (Norfolk) Va. Let's not forget the
scrub lowlands either.

The truth is, that particular brogue is a holdover from the first
English settlements on the east
coast--such as the one on Roanoke Island, NC. In those days (1960s),
folks there referred
to the "trunk" of a car as the "boot"--same as British. Another word was
"strumpet" that was
often used as an invective when annoyed at some person or thing that
happened to be unco-
operative. This word means, in the strictest sense, "whore", and, again
was a leftover from Olde English. I can't speak for the current speakers
of the Queen's English, but this was what I
was told about the origins of the accents, words, and phrases I
encountered when I lived out there.

-Real interesting stuff, thanks for the run down on the local jargon.
The other (and my personal favorite to listen to) that I feel is such a

colorful dialect is that thick cajun country accent. Something about it...

I made friends, graduated high school--even picked up some of that speech for awhile--
but I couldn't hang, so in 1967, I said g'bye and headed west again to "re-learn" the country
"twang" I grew up with and re-acquaint myself with the friends I left behind in 9th grade.

-Hehehe...summer of love, what a great year to be on the road.

Lots
of folks around these "hyar" parts just can't wait to go to the beach in the summer, but I lived
there long enough to get tired of the heat, sand, hurricanes, giant mosquitoes, and deer flies that
won't die--even if you slap hell out of yourself in a vain attempt to kill one of the damned things.

-A bb gun works for the larger ones while it's still light out.

And BITE!! OO-WEE!! So I am a confirmed hillbilly and intend to stay that way!

-Deer flies, horse flies, we got 'em in the swamp..I know the bite well....the flies seem to know me well now and stay away. Eating raw garlic (a strong onion will work in a pinch but it has to be raw) an hour before leaving the house will keep away the bugs (and everyone else).

I AM, however, told that I can do a quite good imitation of the proper British gentleman. No
offense meant to our British friends. A friend and I sometimes get together and crack each other up making wisecracks with a mock British accent and feigning high indignity at each other's irreverence. It is, however, only in good fun. I once did a local cable spot doing this and the target audience, judging from the mail, thought I was from Britain.
73
Jerry

-Ha! Good show, chap. There is a bloke around here who does a fairly good imitation.
Also a chick in DX land from Arizona with a heavy British accent. Each time she keys up everyone thinks the DX from the UK is sliding in.

I appreciate the meaty explanation Richard, infact I may need a doggy bag.
I understand now, how the multiplier works .
The 350HDV's the wrong tool for the task.
Glad I asked first.
You're not as pompous as I originally suspected.
Tnx Again / 73-Barry

I would like to invite you to the most popular forum on the net dealing with radios as well as a lot of other things.

Some areas of interest are, CB Radios, Export Radios, Amplifiers, Ham Radios, Antennas, Meters and Test Equipment, Modifications, Marine Radios, Scanner Radios, Short-wave Radios, Vintage Antique Radios, Microphones & Wiring.

We also have a very large For Sale area with hundreds of listed items as well as Product Failures, World Of DX'ing, Business and Personal Website Advertising.

There are also some other special interest areas for your enjoyment such as Backyard BBQ, The Sports Arena, Home and Auto Repair, Music, Off Roading, Hunting & Fishing.

There are even a couple of areas devoted the our war at hand, America Stands United and War Time Humor.

Not only do we have all these popular areas of interest, we also have our own, very active Chat Room. There are usually people in there 24/7.

We also Have our own CDX DX Club where we have members all over the world that enjoy the art of DX'ing.

We also have our own Auction site where you can post the stuff you have, or bid on the stuff that is already there.

As you can tell, we are a very established forum, with all kids of things to see and do. We have over 440 registered members and we are reaching 9,000 posted messages to the forum.

We have a few well known people that moderate some of our areas such as Mr. Pain, Peakaboo, The Defpom, Rogerbird, Old #7 and many more.

We are not affiliated with any online or offline retailer, so you can rest assured that you will get the honest opinions of everyone on the forum concerning your questions dealing with radios, retailers and products.

What are you waiting for, all the links are below for you to access the best, and most informative forum on the net.

Hope to see you there!

#1 On The Net, The World Wide Radio Forum
Over 448 Registered Members and Over 8,500 Messages

I should drive out to that hamfest just to see the action.
The thing that sucks about the Toledo hamfest is that the county tax
assholes come and harass the people selling for sales tax money as
well as other goofy fees. Does the city or any other entity charge for
parking?

A little insight as to how we age.. Enjoy!

On the first day God created the cow. God said, "You must go to the field with the farmer all day long and suffer under the sun, have calves and give milk to support the farmer I will give you a life span of sixty years."

The cow said, "That's a kind of a tough life you want me to live for sixty years. Let me have twenty years and I'll give back the other forty." And God agreed.

On the second day, God created the dog. God said, "Sit all day by the door of your house and bark at anyone who comes in or walks past. I will give you a life span of twenty years."

The dog said, "That's too long to be barking. Give me ten years and I'll give back the other ten." So God agreed (sigh).

On the third day God created the monkey. God said, "Entertain people, do monkey tricks, make them laugh. I'll give you a twenty year life span."

Monkey said, "How boring, monkey tricks for twenty years? I don't think so. Dog gave you back ten, so that's what I'll do too, okay?"

And God agreed again.

On the fourth day God created man. God said, "Eat, sleep, play, have sex, enjoy. Do nothing, just enjoy, enjoy. I'll give you twenty years."

Man said, "What? Only twenty years? No way man. Tell you what, I'll take my twenty, and the forty cow gave back, and the ten dog gave back and the ten monkey gave back. That makes eighty, okay?"

Okay," said God. "You've got a deal."

So that is why for the first twenty years we eat, sleep, play, have sex, enjoy, and do nothing; for the next forty years we slave in the sun to support our family; for the next ten years we do monkey tricks to entertain our grandchildren; and, for the last ten years we sit in front of the house and bark at everybody.

hrmmm sounds like some people living in my home town.

2743. Need help tuning SWR

Newsgroup: rec.radio.cb
Date: 2002-03-02 01:45:06 UTC
From: Lars <LarsDennert@writeme.com>
Message-ID: <C8Wf8.27428$ZC3.2198231@newsread2.prod.itd.earthlink.net>
Source record: 117204

I just got a new Cobra CB and I have a center loaded short antenna mounted on my fender. Power output indicated on the radio is about half (on the LED bars). I hooked up an SWR meter and it appears the reflection is about 25%. This is after I've lengthened the antenna as far as it will go. Now what do I do? The coax is fairly short. Maybe 6'. Am I running the risk of burning out the final? I blew out a handheld with the same antenna when the antenna was way out of adjustment and the connectors wouldn't allow me to hook up the SWR to check it.

Where is the FAQ for this NG?

Thanks all.

You have been around a while. Back in the days when the Texas stars and such were around, they normally were used with the little rigs the Japanese ground out for their 10 watt licenses. Another one was the amp used for the TenTec Argonaut which died with the amp regs. TenTec built rigs like the Triton that ran 200 out of I believe four transistors of some vintage that did the job pretty well. TenTec advised using an external fan on the heat sink for RTTY etc, as they said not for the transistors that didn't mind being that hot but they didn't want their customers burned.

TenTec later built some linears in broadband solid-state. I note they and everyone else has given them up in favor of things like 4CX1600s -- draw grid current and die.

Any background???

Mc**2

James,

Thank you very much for your advise. I had read a few posts and got a little worried. I am going to use the hand held in my car when I am on the road for both cb and weather. More weather maybe. I also want to be able to carry it with me though.

Again thank you for your advise. Any thoughts on an antenna?

Matt

SWR : If the SWR on the high end of the band is greater than that on the lower end, your antenna is considered to be "LONG" and reduction of physical conductor length will
correct this situation.
If SWR on Low end of the band is greater than that on the high end, your antenna is considered to be "SHORT" and increasing the electrical length of the antenna
is required to correct this situation.
The length of coax need to be 12 to 18 feet in length.
chris NI4L

Right, Dick, after all when FCC incorporates CB into the ARS we will have to consolidate all the newsgroups, also. Cecil has a point.

Nice try (at legitimizing the Texas Star CB amps) but no cigar, Dick.
Putting an amp on an Argonaut is ludicrous. Anyone who bought an
Argonaut bought it for QRP work - not as a 'driver for an amp'. Texas
Star began as, and remains, a bootleg "CB amp" company.

I have notice a few people in the past asking about current in the cig adapter of there mobile. I always assumed all were 10 amps, but I was looking under my hood a few days ago and low and behold I have a 20 amp circuit lighter and I am sure I seen another 20amp circuit for acc outlet. I was amazed!! Pair them and I have 40amps (max) available with out doing any drilling or pulling. This I discover many months after I had already done the drilling and pulling. LOL

Oh '01 Dodge Ram1500 4X4 Sport Off Road package

Just had to share that

You don't need 20 amps for a cb radio do you?

Anyhoo - I've found in the past with installs I've done that wiring any kind of rf device to the cars wiring system produces excessive whine on transmit and sometimes recieve. I've watched car power on a scope - its pretty dirty.

What I do (and they actually ask you this on the general exam - and I'm not kidding) is wire the radio directly to the battery. This way at least if the car is on you have an almost infinite source of power (as long as you have fuel) at almost any power.

I'm running a 25 watt Ic-3200 and a 100 watt IC-730 on a nissan sentra - not noted for its high ampherage wiring system - but so far it works pretty well - and I have a nice crystal clear signal coming out of both radios.

Michael Jantzen ^_^

NEARLY RIGHT!
Actually it's the opening statement in the _FOURTH_
book in the series, "De Bello Gallico IV". Julius Caesar
was as prolific in his war memoirs as was Churchill.

Remembering back 35 years to my 'O' Level Latin,
and the context we had to learn....

"All Gaul is divided into three parts, the first of which the
Belgae inhabit; the second, the Acquitani; the third, people
who in their own tongue are called Celtae, in ours, Galli.
All these differ from each other in language, in customs,
and in laws".

The other set book we did was Virgil's Aeneid, containing
the famous, "Timeo Danaos et dona ferentes"

WRONG! Both top and bottom posting have always
been Internet conventions. Look at the RFC - it specifically
states that bottom posting is a suggestion only and not a ruling; thereby
showing that both habits were extant before the RFC itself
was produced.

Hello Richard: I'll throw my .02 cents worth in here, as I have a few minutes till I leave for work.

Just having a lengthy conversation with one the Linear Amplifier Manufacture type ah guys, from Henry at the TRW Swap Meet last Saturday, it seems that the amp buying market significantly leans towards the 3-500Z, and now 3CX800, & 3CX1500 grounded grid type amps.

And one of the reasons smaller amps aren't made is due to the mass home brewing of amps using the 4X150, 4CX250, 4CX350, 4CX400, and 4CX800 grid feed amps, that are plentiful from the hand books. We walked up and down a few rows of the swap meet sellers and saw a few of the home made type amps. Which Mitch said work real good fore the builders and have a good clean signal for most of them.

Even saw one of the old Heathkit amps with the conduction heat transfer type, where the tube is mounted a to a heat sink and has a fan, man what ever happened to those type of amps?

I am sure the 4CX1600 amps, and other ceramic grids feed tubes, have voltage protecting on the control grids?

Hello Smokin Cash:

Had a old Duster that had a new engine and transmission installed and got the car for next to nothing. So I installed my radio stuff and needed at least 40 amps for the 2 pill amp.

I used the Cigar Lighter, and it worked one time before blowing a fuse. No problem I replaced the 15 amp fuse with a 20 amp fuse, but still the amp blew the fuse.

So to bullet proof the Cigar Lighter system, I bought 2 new Cigar Lighters and mounted then on a "L" bracket, then mounting the L bracket just under the Dash. I ran 2 each #6 gauge wires to the battery, for the positive terminals on the Cigar Lighters. Well it didn't work all that great, and then I figured out that the ground connection was using the vehicles body and not doing a good job of it.

I modified the wiring so that one of the 6 gauge wires was positive, and the other 6 gauge wire was negative, and connected the ground wire to the Cigar Lighters with hose clamps.

Yeah that Cigar Lighter now hummmmmmed, da's right! How many old Dodge Dusters had twice Cigar Lighters?????

Jay in the Mojave

Message-ID: <3C80F095.97304F6D@attbi.com>
Source record: 117234

They have finally found a diagnosis for my condition.

Hooray!! I have recently been diagnosed with A.A.A.D.D.! Age
Activated Attention Deficit Disorder...

This is how it goes:

I decide to wash the car; I start toward the garage and notice the
mail
on the table. Ok, I'm going to wash the car. But first I'm going to
go
through the mail.

I lay the car keys down on the desk, discard the junk mail and I
notice the trashcan is full. Ok, I'll just put the bills on my desk
and take the
trashcan out, but since I'm going to be near the mailbox anyway, I'll
pay
these few bills first.

Now, where is my checkbook? Oops, there's only one check left. My
extra checks are in my desk.

Oh, there's the coke I was drinking. I'm going to look for those
checks. But first I need to put my coke further away from the
computer, oh
maybe I'll pop it into the fridge to keep it cold for a while.

I head towards the kitchen and my flowers catch my eye, they need some
water. I set the coke on the counter and uh oh! There are my
glasses.
I was looking for them all morning! I'd better put them away first.
I fill
a container with water and head for the flowerpots - - Aaaaaagh!

Someone left the TV remote in the kitchen. We'll never think to look
in the kitchen tonight when we want to watch television so I'd better
put it
back in the family room where it belongs.

I splash some water into the pots and onto the floor, I throw the
remote
onto a soft cushion on the sofa and I head back down the hall trying
to figure out what it was I was going to do?

End of Day: The car isn't washed, the bills are unpaid, and the coke
is

sitting on the kitchen counter, the flowers are half watered, the checkbook still only has one check in it and I can't seem to find my car keys!

When I try to figure out how come nothing got done today, I'm baffled because I KNOW I WAS BUSY ALL DAY LONG!!! I realize this is a serious condition and I'll get help, BUT FIRST I think I'll check my e-mail...

Please send this to everyone you know because I DON'T REMEMBER IF I SENT IT OR NOT!!!

What *I'm* looking for is an amp for 6 meters, like one of those little blue Henrys that were around a few years ago. The few 6m amps they sell now have much more power than what I need, and they're not cheap... is there a way to switch the filters on an outlaw CB linear to convert it to 6m, thereby bringing its crime spree to an end?

Yeah, IMHO there are too many OMs who think they are the Morality
Police (but wait 'til they try to get law-enforcement mandate!).

> We use have this little club, the S.S.S.S. the Seven Six Secret Service.
>
LOL---sounds a bit like KE6VRK's 6-1/2 meter club. That SOB & his
micro chums used to go around, butting in on cordless phone calls
(although I must confess I almost died laughing the time he nailed me
and insulted my phone in Spanish. Guess who bought a 900 MHz phone
shortly thereafter). BTW if you see the bum, tell him to come pick up
his Ethernet hubs and take a hike.

> The SSSS is still talked about today on the 147.435 Zoo repeater.

LOL---now the predominant 435 show seems to be sponsored by Scott's
JAMS, the Junior Amateur Men's Society... an example of what NOT to do
with a ham radio!

Ahh, the good old days of the mid-'80s, when the Ducks and the CJs
vied for supremacy on CB channel 11 in SoCal (yeah, I was there)...
channels 3 to 35 were practically solid jamming, not the near-desert
they are today...

It is very possible. I have seen this brought up before but it may depend on the design of the amp. Legality brings up a whole other issue that I am sure a few people would be able to pound into your head, but then again it may not matter to licensed amateurs. Anyways, I have a "6 meter" linear amplifier made by a company called Fist Commercial Communications. It has two 6LQ6 sweep tubes in it and when I got it there was a coil tap inside that was obviously moved. I asked someone about it and they said that it may have been converted to 11/10m. So if it was possible to convert this amp, it may be possible with a few other tube/SS amplifiers.

Good Luck!

Makes sense. With the 50 watt drive requirement home-brew is the only legal way to do much with small transmitters and when you have 100 watts, grounded grid is the easy and stable solution to a full legal, in Henry's case beyond, amp. Particularly with the Z tubes that run Class B at zero bias.

GE's Mastr Prog series used a tube I do not remember (oversized 829B) that fit into a big machined aluminum block that was big enough and exposed enough to heatsink a blowtorch for their 110 watt out transmitters. I used somewhat the same concept they used with the 2 transformer power supply in which the screen supply was fed to the center tap of the second transformer and bootstrapped up for the plate. The screen could not exceed the plate under almost any conditions.

The 1600 is an extreme example but a lot of tubes are not particularly in love with grid current, the most usual encounter is with the 2E26-6146-8298/6146B series that might take 4 mils on a good day but 3 is wiser. In an amateur installation the usual setup uses a connection from the amp to the ALC circuitry in the exciter so detecting grid current is a

part of whatever system to maintain linearity is used. These boil down in most cases to a variation on Dr. Wheatstone's famous bridge.

Where you can't do that, most CBs do not offer access to the ALC assuming of course that it has not been clipped anyway, about all you can do is detect it and bitch loudly about overdrive from the panel. How much good that will do is problematical so you do something like swamp the shit out of the grid circuit and try to get proper drive somewhere closer to max drive and let the propellors on the op's beanie spin merrily. The circuits in the Handbook's 4CX1600 article are good examples although the overall design makes my skin crawl.

Have a fine day at the wars. We may have the coldest day of the year tomorrow for my Christian Carting and I have a diesel. Always scares you when it fires up and you are firmly convinced you are about to have a driveway full of scrap iron. Kind of like when they pulled the DC-3's behind the hangar to start them; no passenger seeing the Wrights fire up would get on the plane.

>Argonaut bought it for QRP work - not as a 'driver for an amp'.

You don't speak for everyone, so you can'r speak for "anyone."

>Texas
>Star began as, and remains, a bootleg "CB amp" company.

But I know at least three licensed ARO's that use Texas Star amps on 10-meters. One Tech+, a General, and an Advanced. I believe that's a "straight" in cards. Actually, I don't know squat about cards. But I DO know that I can legally buy that little TS-350HDV "CW transmitter," convert it into a 10-meter amp, and use it on 10.

Bert, Using your reasoning then Yaseu, Kenwood and Icoms are now CB Radios
because many Cb Operators use them.

Bert, Aaronia lives in that strange world of 14 year-old girls where all issues are black-and-white with no shade of grey let alone color. You are a friend or a traitor, things are right or wrong and if you don't join the Army of God it is obvious you are in league with Satan and deserve the back-stabbing she is ready to give you. As Dr. Laura put it, if you are 14 and female and can't be a snot there is no point in it.

I don't know Texas Star's story. TenTec attracts me for the same reason Division III football interests me more than Division I-A or the pro game. Football or electronics for the hell of it. My favorite team is still the Stanford Thunderchickens that looked like something out of Doonesbury and beat hell out of Woodrow Wilson Hayes but Ohio State missed the opportunity to can his sorry butt and had to wait til he did the same thing against Clemson.

TenTec makes neat military gear, a lot of boxes and cases for others, and does ham stuff and SW for fun. They refuse to submit gear to EU standards mostly because they don't care if Brussels loves them or not. While I doubt their ham gear is a money-making venture it can't lose a whole lot or it makes no sense even to develop some tech-couth for Sam.

Some of their approaches are strange, in the Triton they used some op amps from RCA that failed the freq response standard but ran admirably thru 30 MHz, built their own crystal filters, and who the hell else sweats QSK cw? The Argonaut was a pretty basic rig pre-WARC bands but the receiver was up to it so why not sell a linear? I kind of have visions of the engineering staff being allowed to build stuff that turns them on and whose production costs were paid by Sam so if you get incremental costs back the Accounting Trolls don't bitch too loudly and you tell the stockholders about the wonders of diversifying your marketing.

It appears that Texas Star's stuff was a cut above the usual 'hey, kid wanna buy an amp' crap built in the service bay at the local truckstop. Either they were incredibly naive or didn't have families to support. They may have had day jobs for all I know. If you look at their schematic for the Ham CW rig, the amp part isn't too shabby but the CW oscillator would chirp like a cageful of canaries.

When it became illegal to sell amps needing less than 50 watts of drive on the ham bands and the market for the 10 watt Japanese rigs collapsed in Japan people with converted CBs had very little choice but to resort to things like this.

Aaronia, go find a large tack and sit thereupon.

I don't follow YOUR reasoning. There are some major diffs between Part 95 and Part 97. That these radios are used on or near CB freqs is undenied and that Ancient Modulation is included on them to sell to outlaws is undeniable.

Amateur rules allow conversion of rigs. As well as CB units, at various times the outlawed AM marine units were converted, SSB was built on ARC5 military transmitters turned VFO, and repeaters came into general usage when the commercial FM channels were split making tons of gear obsolete. Part 97 basically allows one to run anything he is willing to be responsible for as an OPERATOR where part 95 denies that operators exist but users do.

The Amateur Service runs on junque to a very large extent.

2790. 6 CITIZEN BAND RADIOS FOR SALE FOR PARTS $35.00!

Newsgroup: rec.radio.cb
Date: 2002-03-02 18:15:42 UTC
From: Nighthawk <nighthawk111@juno.com>
Message-ID: <iF8g8.19821$hD2.2871541968@newssvr15.news.prodigy.com>
Source record: 117106

I have 6 Citizen band radios for sale for parts, or you can fix them up. I have not worked on them, nor do I plan to. They are as is.

This is what I know about the units:

1 Pace 8004, lights up, sound, no microphone, no mounting bracket, no power cable, case needs paint job.

1 Realistic TRC-452, lights up, sound, no microphone, no mounting bracket, no power cable.

1 Realistic TRC-473, lights up, bad display & S-meter, everything else works, dead keys 5.5 watts, swings to 15 watts, no microphone, no mounting bracket, no power cable.

2 SBE Formula D, Type No. SBE-26CB, I have not tested, so consider not working, no microphone, no mounting bracket.

1 SBE Sidebander II, Type SBE-12CB/T, I have not tested, so consider not working, no microphone, no mounting bracket.

If you work on Citizen Band radios, these unites are a treasure trove of hard to find parts. Or they can be fixed up and used. I originally planned to fix them up, but with a new interest in amateur radios I don't have the time or the room. That is according to my wife. If you live close to Moore, Oklahoma, you can pick them up, if not I will only charge what it costs to ship them to your location. I will box them up at my expense.

If interested please e-mail me at nighthawk111@juno.com

Thank you,

Nighthawk

I mostly listen and chat on channel 19 but I have a question about some other channels on the 11 meter band. I have noticed that on some channels.. mainly 26 and 28 in the late afternoon I hear a lot of folks referring to themselves by numbers.. for instance "this is 797 standing by" or "this is 436 standing by in new jersey" are these people hams?? Or are they just operating cb base stations. Occasionally I hear them also on channel 6,10, and 16 but mostly 26 and 28.

Not so. That would be illegal. It has nothing to do with reasoning, just the
FCC rules as they are currently written.

It's about a 2.5 to 3 hour drive from here, but I think it would be
funny.
I checked the admission price, and it is $6. Seems a little high for a
small over regulated fest.
I definatly will be at Madison to meet up with some friends. Come on
out and say hello.

The funny thing is that I would've assumed that Texas Star CW transmitters/amps were illegal...until I actually read one of Aaron's repetitive posts. Thanks A!

>I don't know Texas Star's story.

"Legend" has it that a group of enterprising...gulp...hams started the fledgling bizz and that their "engineering" pool is shared with another well known amp manufacturer from Escondido, CA. As for Ten-Tec, I've always liked them...yet not enough for me to buy an Omni over a FT-1000D.

>It appears that Texas Star's stuff was a cut above the usual 'hey, kid
>wanna buy an amp' crap built in the service bay at the local truckstop.

That was their "hook." You'll also notice that they're the only amp builder that carefully tip-toes around the FCC rules. Lest I sound like a Texas Star cheerleader, I can't vouch for their performance first hand although I have been on the receiving end of their signal. Fairly clean as far as I could tell...on SSB, that is.

>but the CW oscillator
>would chirp like a cageful of canaries.

I'd be surprised if even one is used as such. :-)

Barry,

After reading your reply to Richard. You made a good decision. The
350HDV, is the wrong tool for task.
I'm assuming that you are operating mobile, I would recommend one of
the solid state amplifiers, manufactured by a more reputable company.
Ameritron makes the ALS 500. It produces 500 watts pep that's will
give 7 dB of gain. Another company is Henry radio they produce several
solid state amplifiers. The 13.8 volt SS500 and SS750. Ten Tec use to
produce a mobile amp too. Though I don't see it on there webpage.
These amps are not cheap but you might be able pick one up on the used
market.

> Maybe correcting the coax will help.
>

One of the great enduring myths of CB is that coax length is significant.
It isn't so do not expect much to change when you futz with the feedline.

Back off six feet and contemplate before a rip-tear session. Start right
where the mount is attached to the vehicle. Is it sensible to even be on
the fender, is it attached or sort of hanging there, is the hood part of
the vehicle electrically (hell, could be fiberglass for all we know). Is
something shorted?? The car is half the antenna, are you in fact
connected to it?

Now turn on the unit and listen. Are you hearing what you think you
should be hearing? If the receive is not good, odds are you have shorted
something against the car or opened a shield somewhere. Now start the
engine, if you hear racket a shield is definitely open. Does the unit
have a real DC ground or are you trying to use the coax as a power ground.
That as well will give you some system noise. Whole point, do a visual
and check out what you can see.

Now you are ready to set the antenna. You may not get it down to 1:1 on a
fender but you should be able to get it down to rationality. Here is how:
take a reading on Channel 1 and on 40, 23 as well if you are a bit of a
perfectionist. Your description is of an antenna that is too long for the
freq among other things. This will give you an improving SWR as you move
downband if you are not already completely out of bed. So shorten it a
bit and by bit I mean something like 3/16 max and try again. If you get
it right, you will have minimum SWR in the middle of the band rising to
the edges. For the protection of the unit, keep the test blasts short.

Good luck.

Dick N&#65533;BK

> Lars the coax is important and should be in 9 foot increments or you will
> kill it to.

BULLSHIT!

Short antennas have a very small bandwidth and your SWR will increase quickly at the band edges if tuned to 27.185 MHz (CH19). A 1:1 SWR does NOT means resonance. It only means a 50 ohm antenna. A properly installed 1/4 wave whip will have an SWR of about 1.55:1. This is because it is a 36 ohm antenna. Buy something with a 5 foot radiating element as a minimum. A Wilson or K-40 will work. Stay away from the shortened versions. A CB wave is 36 feet long. You need a 1/2 wave to be efficient. Half of that 1/2 is the radiating element, the other 1/4 is the ground plane (car body). This is nature's law and you can't break it!

From: NI4L <ni4l@charter.net>
Message-ID: <3C815353.7A851FE4@charter.net>
Source record: 117127

SSB PULSER....
Works with all amps and Tube
type radios....Tune your gear up without fear anymore.
Easy to install in any mic
or radio.. Uses 9 volt power source.Hooks to audio hot and ground.
Tune your gear to full
output using this SSB pulser. Small enough to fit in the base of a
microphone.
This is NOT A CW PULSER
which key's and unkey's in the CW mode . This works in SSB MODE.
Key your mic push the
moumentary switch to activate the pulser and Tune Away.
Let me give you an
example.....
Tuning a Dentron Clipperton
L amp. with a Icom 751 A radio, Pulser installed in a Ten_tec 705 mic.
set radio to full output on
desired frequency SSB MODE into a resonate antenna of course.....or
dummy load
Set amp to proper band
settings
Key mic and push Pulser
button..... watch watt meter it will show aprox 100 to 200 watts out
when tuned to peak output
using Pulser....Remember don't key too long 10-15 seconds
Then check output using
voice.... It will be full Output 1200 watts
See How easy that was....
The amp loved it and now your ready to talk at Full output.
The same tuning is used to
tune a tube type rig also.

==========
Some time ago a kind fellow Ham, also on this NG ,sent me an article from
QST
March 1967, by Gerald D. Jones , K2AYM
pages 11- 15 : Six-Meter Kilowatt with 4-400s or 4-125As . Anode voltage =
2000 V.
In addition to the 2 RF power valves ,a screen voltage regulator employing a
6BF5 tube is used ,but of course this can be another type.
Kilowatt is meant as 1000W input as was customary in those days. So the
output is probably 600W max.
The design can be scaled down for lower power .

There is another design for an 80W RF 6m amp by G4IDE , utilising a double
tetrode QQY06-40A or its US (near)equivalent, of which I have a scanned
image on
my system . If you need it pse let me know , if possibe in the next 2 days.

How about this:
1) Drill press with base plate clamp
2) 2 different sized drill bits and a little imagination.

This the one and only message reguarding the previous Posts reguarding me.

The so-called "threats" I *supposedly* made. were not Made by me, they were made by someone who at the time, was on the same ISP, as me, but as usual, I got blamed, but I didn't say anything about, cause I figured, if I said, I didn't do it, poeple would call me a liar.

Anyhow, I will NOT be attending the Marshall Hamfest, Nor the Toledo as I have working alot, A *whole* lot, as in 10 hours a day, 6 days a week and I only really get in here in the evening when I get home, As for the threats, made by the anonymous pussy faced mother fucker, who ain't the fucking balls to post his real name and e-mail address, fuck you and the fucking horse you rode in, Go let fucking boobner fuck you in the ass, because that my freind is all you'll EVER Get!

Anyhow, this is my *LAST* posting *EVER* in this NG, using my amateur radio callsign, I might appear again under a anonymous ID... But never as Chuck or K8CPA again.... you asshole bastards ain't worth it, not at all.... you mother fuckin' asshole ruined my business, my name and I'll be damned if I'll let it happen again...

Farwell....

signed,

[The following was received in an email from a friend of mine 3/1/02 and I thought I would post it here for all to enjoy.]

Read all the way to the bottom!

If you will take the time to read these, I promise you'll come away with an enlightened perspective. The subjects covered affect us all on a daily basis!

They're written by Andy Rooney, a man who has the gift of saying so much with so few words. Enjoy...

I've learned... That the best classroom in the world is at the feet of an elderly person.

I've learned... That when you're in love, it shows.

I've learned... That just one person saying to me, "You've made my day!" makes my day.

I've learned... That having a child fall asleep in your arms is one of the most peaceful feelings in the world.

I've learned... That being kind is more important than being right.

I've learned... That you should never say, "no" to a gift from a child.

I've learned... That I can always pray for someone when I don't have the strength to help him in some other way.

I've learned... That no matter how serious your life requires you to be, everyone needs a friend to act goofy with.

I've learned... That sometimes all a person needs is a hand to hold and a heart to understand.

I've learned... That simple walks with my father around the block on summernights when I was a child did wonders for me as an adult.

I've learned... That life is like a roll of toilet paper. The closer it gets to the end, the faster it goes.

I've learned... That we should be glad God doesn't give us everything we ask for.

I've learned... That money doesn't buy class.

I've learned... That it's those small daily happenings that make life so spectacular.

I've learned... That under everyone's hard shell is someone who wants to be appreciated and loved.

I've learned... That the Lord didn't do it all in one day. What makes me think I can?

I've learned... That to ignore the facts does not change the facts.

I've learned... That when you plan to get even with someone, you are only letting that person continue to hurt you.

I've learned... That love, not time, heals all wounds.

I've learned... That the easiest way for me to grow as a person is to surround myself with people smarter than I am.

I've learned... That everyone you meet deserves to be greeted with a smile.

I've learned... That there's nothing sweeter than sleeping with your babies and feeling their breath on your cheeks.

I've learned... That no one is perfect until you fall in love with them.

I've learned... That life is tough, but I'm tougher.

I've learned... That opportunities are never lost; someone will take the ones you miss.

I've learned... That when you harbor bitterness, happiness will dock elsewhere.

I've learned... That I wish I could have told my Dad that I love him one more time before he passed away.

I've learned... That one should keep his words both soft and tender, because tomorrow he may have to eat them.

I've learned... That a smile is an inexpensive way to improve your looks.

I've learned... That I can't choose how I feel, but I can choose what I do about it.

I've learned... That when your newly born grandchild holds your little finger in his little fist, that you're hooked for life.

I've learned... That everyone wants to live on top of the mountain, but all the happiness and growth occurs while you're climbing it.

I've learned ... That it is best to give advice in only two circumstances; when it is requested and when it is a life threatening situation.

I've learned... That the less time I have to work with, the more things I get done.

To all of you... Make sure you read all the way down to the last sentence.

It's National Friendship Week. Show your friends how much you care. Send this to everyone you consider a FRIEND, even if it means sending it back to the person who sent it to you.
If it comes back to you, then you'll know you have a circle of friends. HAPPY FRIENDSHIP WEEK TO YOU!!!!!! YOU ARE MY FRIEND AND I AM HONORED!

2824. Just Fred

Newsgroup: rec.radio.cb
Date: 2002-03-02 23:33:43 UTC
From: arcweb@bnnorth.net
Message-ID: <3c815f67.3600929@news.bright.net>
Source record: 117135

A local law enforcement officer stopped a car for traveling faster than the posted speed limit. Since he's in a good mood that day he decides to give the poor fellow a break and write him out a warning instead of a ticket.

So, he asks the man his name.

"Fred," he replies.

"Fred what?" the officer asks.

"Just Fred," the man responds.

When the officer presses him for a last name, the man tells him that he used to have a last name but lost it. The officer thinks he has a nutcase on his hands but plays along with it. "Tell me Fred, how did you lose your last name?"

The man replies, "It's a long story so stay with me. I was born Fred Dingaling. I know, funny last name. The kids used to tease me all the time.
So I stayed to myself. I studied hard and got good grades. When I got older I realized that I wanted to be a doctor. I went through college, medical school, internship, residency, finally got my degree so I was Fred Dingaling, MD. After a while I got bored being a doctor so I decided to go back to school. Dentistry was my dream. Got all the way through school, got my degree so I was now Fred Dingaling MD DDS. Got bored doing dentistry so I started fooling around with my assistant. She gave me VD. So, I was Fred Dingaling , MD DDS with VD. Well, the ADA found out about the VD so they
took away my DDS so I was Fred Dingaling , MD with VD. Then the AMA found out about the ADA taking away my DDS because of the VD, so they took away my MD leaving me as Fred Dingaling with VD. Then the VD took away my 'dingaling' so now I'm just Fred."

The officer walked away in tears, laughing so hard and tore up the Warning Ticket

2832. 6 CITIZEN BAND RADIOS FOR SALE FOR PARTS $35.00!

Newsgroup: rec.radio.cb
Date: 2002-03-03 00:15:22 UTC
From: Nighthawk <nighthawk111@juno.com>
Message-ID: <uWdg8.16837$Nj2.2209544322@newssvr17.news.prodigy.com>
Source record: 117142

I have 6 Citizen band radios for sale for parts, or you can fix them up. I have not worked on them, nor do I plan to. They are as is.

This is what I know about the units:

1 Pace 8004, lights up, sound, no microphone, no mounting bracket, no power cable, case needs paint job.

1 Realistic TRC-452, lights up, sound, no microphone, no mounting bracket, no power cable.

1 Realistic TRC-473, lights up, bad display & S-meter, everything else works, dead keys 5.5 watts, swings to 15 watts, no microphone, no mounting bracket, no power cable.

2 SBE Formula D, Type No. SBE-26CB, I have not tested, so consider not working, no microphone, no mounting bracket.

1 SBE Sidebander II, Type SBE-12CB/T, I have not tested, so consider not working, no microphone, no mounting bracket.

If you work on Citizen Band radios, these unites are a treasure trove of hard to find parts. Or they can be fixed up and used. I originally planned to fix them up, but with a new interest in amateur radios I don't have the time or the room. That is according to my wife. If you live close to Moore, Oklahoma, you can pick them up, if not I will only charge what it costs to ship them to your location. I will box them up at my expense.

If interested please e-mail me at nighthawk111@juno.com

Thank you,

Nighthawk

Anyone else hear THE BODY SHOP on channel 16. I think it is somewhere in New England. Drives me crazy here in Houston. They never shut up in the daylight hours!!! "Anyone out there for the body shop. 15 dollar showers." If I could afford it these people would be the only reason I would brake the law and run an amp. I would sit across the street and everytime they keyed I would shove 20K down their radios throat. I wonder how many times they would repair their radio before giving up on the solicitation on CB?

There was a young preacher named Fiddle,
who refused to accept his degree.
Said 'tis bad enough to be Fiddle,
Without being Fiddle, DD.
